want to be where folks is kind to each other, and don't fight and tear at one another, and git like beasts. . . . But mostly it's—oh, I calc'late it's jest bein' among folks that *thinks* different!"

"Uh-huh."

"The' *is* folks that thinks different, ain't the'? When I think about decent folks, I allus think about streams comin' down the mountain—jest ripplin' and *clean*. . . ."

"I calc'late I know. . . . Um. . . . But about Freddie, now? Jest supposin' you and him was to run away together and all? What's it your idee to do?"

"Oh," she said, "we'd marry, jest like folks outside does!"

The appalling innocence of this shook the old man; but he gave no sign.

"And," she said, her eyes half closed, "I'd like me a house that I could keep *clean*. And I'd like suthin' to *do*—suthin' besides hidin' and shiverin' and livin' amongst filth. It does seem like I never could git things clean enough. . . . Seems like that's one word I think about all the time—*clean*."

"LEMME look at ye," Scattergood said slowly. "Stand up, so's I kin see ye, and all."

She stood erect, slender, fragile, sweet—of a loveliness which her ill-fitting dress could not conceal. He looked into her eyes, and found them innocent and gentle.

"I calc'late," he said, "the's still miracles!"

"I don't understand ye."

"'Tain't likely you would." He looked at his watch. "I got jest short of an hour," he said.

"What for?"

"For what I got to contrive."

He stood a moment, pinching his pudgy cheek, and then, with a heave of his enormous shoulders, turned again to the girl.

"I calc'late it don't matter," he said, half to himself. "I hain't so young, and I've got about as much as most folks out of life. . . . And the young 'uns ought to git their chance, even if it costs the old folks."

"I don't understand," she said. "And—and they'll be coming to look for me. You better go away."

"I'm goin' the other way," he said; "and strong young laigs kin walk fur in an hour. . . . You listen to me: You're a-goin' to git that cleanness you was wishin' fur—if I kin arrange it. So you jest start out and walk—walk as tight as you kin, keepin' out of sight by the roadside. I calc'late their minds'll be so busy they won't git time to think of ye. Keep a-walkin' till I ketch up with ye. . . . And if I don't ketch up, why, you keep on a-walkin' anyhow. You'll meet a crowd, more'n likely, if I don't come, and you jest give 'em this word from Scattergood Baines: Tell 'em I said you was to be taken care of at all costs, and not to bother about me till that's done. . . . Now, as soon's I start drivin', you start walkin'—and Freddie 'll be at the other end of it."

"But—"

"You jest do's you're told," he said, and clambered into his buggy. Without another word or look, he clucked to his horse and drove toward Half Acre. The Haddy girl watched him, undecided; then determined to obey, and set off as fast as her legs would carry her in the direction of Coldriver.

Scattergood drove into Half Acre. Very few strangers drove there, and as his horse clopped into view there was a sudden hush. Unhealthy faces pressed against dirty window panes; starved dogs snarled; glowering men appeared in doorways. Scattergood drove on imperturbably to the building which was at once store and blind tiger, and there he stopped.

"Pete Haddy here?" he asked of a lounger on the steps.

"Hey, Pete," the man shouted, without answering. "Here's a fat jasper wants to see you."

Pete Haddy stood framed in the doorway, scowling; other men were visible behind him.

"How be ye, Pete?" Scattergood asked. "How be ye? You kind of invited me to come out yestiddy; so I come. Allus curious about this town."

"What d'ye want here?" Haddy demanded in a growl. "We don't favor strangers."

"I hain't no stranger," Scattergood said, as he alighted. "It jest seemed like you 'n' me better have a talk."

"Be you alone?"

"To be sure." He drew out his big gold watch, and glanced at it. "I'll come in and set," he said.

"Folks that comes here," Haddy said with a snarl, "mostly sets up the drinks."

"I don't buy illegal licker, nor no other kind," Scattergood replied; "but I'm willin' to treat to sody pop." Guilelessly he drew out his wallet, displaying bills which made the mouths of his audience water. One or two nudged each other ostentatiously.

THE Six Big Men stood grouped together, a contrast to the other shifty-eyed, shuffling creatures in the room. They were men, if evil men, and to none of the rest did Scattergood give an instant's attention.

"You Haddys run this town," he said; "why don't ye keep order in it?"

"We do what we want to," said Pete.

"'Tain't right to go committin' depredations." Scattergood's voice became complaining, and he glanced about apprehensively. Pete laughed harshly.

"Beginnin' to wish ye hadn't of come, eh?"

"I wish," said Scattergood, "the' wa'n't no sich place to come to. Now, I been kind of thinkin' us folks in Coldriver might buy ye out, lock, stock, and barrel, if ye was to promise to move off some'eres else."

"This here jest suits us," said Pete. He chuckled. "But I tell ye what, if you folks is scairt, why, mebbe, we'd consider lettin' ye hire us to guard your hen roost!"

Scattergood had gained his point: Here was something to discuss which would occupy their minds and consume time. They argued it, while the men crowded closer. It was a proposition which appealed to them and excited their perverted humor—to be paid tribute by Coldriver; to be hired for good, hard money to abstain from interfering with the persons and property of the village below. Scattergood glanced at his watch. The girl had been on her way more than half an hour!

AGAIN DUNLOPS WIN WORLD RECORD

Captain Campbell's 207 miles per hour

OVER 104 yards a second . . . the fastest mile made anywhere . . . on track, road or beach. The wonderful driving of Captain Campbell at Daytona Beach smashed all speed records of all times.

No other tires ever stood anything like the strain imposed by the daring Captain in his 900 h. p. Blue Bird Car. Centrifugal force so great it would hurl a tire tread sky-high . . . terrific internal heat! And yet the Dunlops came through "perfect," according to Captain Campbell.

Such supreme tire tests provide the knowledge from which Dunlop's everyday tires have been perfected. The previous world speed record was made on Dunlops—Dunlop holds eighteen world records in all.

. . . But Dunlop's proudest record is this: 26,000,000 Dunlops are giving greater safety, surer service, and bigger value to millions of motorists.

DUNLOP TIRES

THE RIDGEWOOD
DAYTONA, FLORIDA
E. P. WOODBURY, MANAGER

February 20, 1928

Mr. E. B. Germain,
President, Dunlop Tire & Rubber Company,
Buffalo, N. Y.

Dear Mr. Germain:

Thank you so very much indeed for your congratulations contained in your wire which I received today.

I would like to most heartily congratulate you on the wonderful tires which you have produced, as those that I used when my car succeeded in breaking the record were uncut and in absolutely perfect condition, even though they had been through this gruelling test.

To give you some idea of the utmost confidence which I have in Dunlop tires, although arrangements had been made for McDonald to be at the extreme end of the course so that he could change my wheels for the return run if necessary, I did not even bother to stop to let him examine these after my first run, when the car succeeded in reaching a speed of over 214 miles per hour, as I felt they would last the return journey and give no trouble. I think that this expresses my absolute confidence in your wonderful production.

With kindest regards, I am

Yours most sincerely,

Malcolm Campbell

The Safest Road

HIGH above the Hudson winds steep Storm King Highway, one of the world's most beautiful motor roads. Sheer mountain on one side, deep flowing river the other. The motorist who travels this highway must have that freedom of mind which comes from knowing his car is fully equipped for safety. Such freedom is yours when you know your brakes are lined with Multibestos. For Multibestos is *tempered*—by an exclusive process called *Pre-heating*—against heat, wet and wear, giving it dependability and long life. Next time you have your brakes relined specify

MULTIBESTOS

WALPOLE, MASS., U. S. A.

He haggled and bickered; Pete Haddy baited him, and he submitted to it.

"I tell ye what," said Pete, "before this here negotiation goes any farther we want suthin' to show your good faith. Eh, boys? We want a payment down. So, jest reach into your pants pocket and hand over that there wallet."

"Looks like you men was startin' out this agreement by breakin' it," said Scattergood nervously. "This hain't nothin' short of robbery."

"Call it any fancy name you favor," said Pete, "jest so long as ye pungle out."

Scattergood demurred; and it was evident to the Six Big Men that he was fearful.

"Set on him and take it off'n him," one of them advised.

"Don't ye go to touch me," Scattergood said. "Don't ye lay a hand onto me, or I'll have the law on ye."

"The' hain't much law up here—exceptin' Haddy law," said Pete. "Pungle!"

Scattergood reached into his pocket, but it was for the big gold watch. Another ten minutes was gone—three quarters of an hour. If the girl had hastened she would be far by now—far toward safety. . . .

"W-al," he said, "'tain't fair; but I got to be goin'. We kin settle them terms in a minute, and I don't see no way out of makin' a payment down."

BUT before Pete could answer, a woman burst through the door. "She's gone, Pete," the woman wailed. "I been lookin' everywhere for her. She's took off!"

Pete turned, and his face was suddenly black. "What?" he said in a voice so cold and savage that a more warlike man than Scattergood might well have felt a chill along his spine.

"Nobody hain't seen Ann for an hour. The's a dozen huntin' her. She's clean disappeared."

Pete faced Scattergood. "Come dickerin', did ye? Calc'lated to work a dodge on the Haddys, eh? Figgered ye could hold us a-talkin' here, whilst that young feller run off with our sister! Hey, you, scatter! Git your hosses and tear up the road. She's headin' for Coldriver. . . . And when you ketch up to them don't let that feller git away this time." He swung again upon Scattergood. "And what did ye think was goin' to happen to you?"

"Now, you listen—you listen to reason," Scattergood said imploringly. He backed against the wall as Pete advanced menacingly. Of a sudden, his voice changed, he no longer cringed.

"Don't nobody step outside that there door!" he ordered. "You stand back, Pete. . . ."

Haddy crouched for the spring; but arrested himself in mid-motion, for Scattergood was holding in his hand a brown paper package, holding it in the attitude of one who means to dash it against the floor. It was cylindrical in form, and possibly eight inches long.

"Git back," he said. "All of ye. Line up agin the wall yonder. . . . Did ye think I was takin' chances with sich as you be?"

The room was still, all eyes were fixed on that cylinder wrapped in butcher's paper. It was of a shape they recognized, being men of the woods, for often they had seen such shaped cylinders used to break log jams in the rivers.

"Back up there, and no monkeyshines," Scattergood said, and step by step they edged away. "Seems to me the' hain't anythin' I'd enj'y more 'n blastin' this town off'n the map!"

There were men there who might have faced a gun, and taken their chances; but where is the man who will confront willingly a death involving a search of the county for the fragments of his remains? . . . Even the Haddy men remained very quiet. Scattergood backed toward the door. "I'm a-goin' now," he said; "and if I was you I wouldn't foller. . . . Coldriver's movin' this way, and ye might encounter 'em. Jest stand nice and quiet where ye be!"

He backed over the threshold and sidled down the steps. No man moved within. With surprising agility he was over the wheel and in his buggy, and then he astonished his rotund horse by a sudden application of the lash. . . . In an instant, the horse proved there was something more to him than the appearance of rotundity, for he leaped forward, bit in teeth, and the houses of slatternly Half Acre flashed past him on either side.

Scattergood did not look back; his hands were full, holding the animal to the semblance of road. Again the lash fell, for he must put much space between himself and that place before the Haddys recovered and could run to their respective stables for horses. . . . There came no shot. In that, luck was with him, for the Six Big Men were not accustomed to go armed, depending rather upon the fear created by their size and their ferocity.

On Scattergood dashed, a mile, two miles, and he did not spare the whip. Around curves, down sharp declines in the road, the buggy swayed and leaped and clattered. . . . Then, ahead of him he saw a movement of white. He settled his feet against the dash, wrapped the reins about his huge wrists and laid back. The horse came to a trembling stop.

"Jump in—spry," said Scattergood. And again the lash fell. Not yet had he heard sounds of pursuit, not until that stop to take aboard Ann Haddy. But then, in the sudden stillness, distant shouts came to his ears. They were coming. . . . But still distant. Then, as they rounded the shoulder of a cliff they saw in the valley below half a dozen motor cars coming swiftly.

Scattergood looked at his watch. It was not yet time for the fire bell to ring; but here came Coldriver, a third of the way to Half Acre.

"I calc'late Pliny Pickett must 'a' used his own jedgment for once," he said to himself. "You can't never tell when a miracle'll happen!"

IN FIVE minutes they were among the young men of Scattergood's own town, young men and middle-aged men, and not a few old men who had lived their years beside Scattergood Baines—old men who would not stay behind when they knew their friend was in peril.

"'Twa'n't my fault," Pliny said anxiously. "Freddie done it. He wormed out of me what you was calc'latin' on

NASH

has *Extra Power*—to lend still greater pleasure to your Motoring

ONE particular source of satisfaction that comes with Nash ownership is the *extra power* in Nash performance.

Nash is the car that welcomes hard work, the grind of touring, the pull of steep grades. The great Nash motor is extra powerful for the same reason it is extra smooth—*the perfect balance of 7 bearings.*

In addition to 7 bearings, Nash clutch, flywheel and crankshaft are balanced *as a single unit* on precision machines, for still greater smoothness and greater conservation of power.

And then, the Nash *straight-line drive* sends all this *extra power* straight to the sturdy rear axle. There are no angles in the Nash power flow to waste efficiency.

Each one of the 24 charming Nash models, priced from $845 upwards f. o. b. the factory, has this *extra power!*

NEW REDUCED PRICES

STANDARD SIX $845 to $995—SPECIAL SIX $1135 to $1445
ADVANCED SIX $1340 to $1990

Now is the time for new Silvertowns!

THIS summer, watch Silvertowns break their own fine performance records!

By their hinge-center tread, they have banished the choppy, uneven wear which shortens balloon tire life.

By their structure of heavily rubber-ized cords, they have made fabric breaks and bruises almost unknown.

By the Goodrich Water Cure, they are completely and uniformly cured from both inside and outside instead of from outside only—resulting in extra toughness and longer wear.

The new Silvertowns now passing into Goodrich dealers' stocks represent the highest development of these three factors of record-breaking mileage. There's a Goodrich dealer near you!

THE B. F. GOODRICH RUBBER COMPANY, Akron, Ohio. *Est. 1870*

Pacific-Goodrich Rubber Co., Los Angeles, Calif. *In Canada:* Canadian Goodrich Rubber Co., Kitchener, Ontario

doin', and nothin' would do but what he must come rampagin', with the town at his heels."

"Um. . . ." Scattergood's eyes twinkled. "And I thought it was a miracle. I'm dog-gone glad, Pliny, I kin still depend on ye to carry out orders to the letter. . . . That's right, Freddie, take her in your own car. . . . And, Ann, ye needn't to shy off him. He hain't allus a-goin' to look that battered up."

"You should have taken me," Freddie said. "I had a right to go. You might 'a' got yourself killed!"

"It didn't turn out that way," Scattergood said. "Um. . . . Any of you boys feel a mite peckish?" He drew from his right-hand coat pocket a brown paper-covered cylinder and from his pants pocket a huge jackknife. From the paper he unwrapped a length of bologna sausage, and cut off a generous slice.

"Allus carry suthin' along in case I git delayed from my meals," he explained. He grinned. "Ever notice, boys, how a length of bologny's about the same dimensions as a stick of dynamite? . . It's an interestin' fact that hain't never been called to the attention of Half Acre."

THE Haddys galloped to the shelf above the valley, and there stood grouped against the sky line, peering downward. The odds against them were too great. Sullenly they turned their horses' heads homeward.

"Hey, Freddie," said Scattergood, "be you takin' the gal home?"

"Fust of all," said Freddie, "I'm takin' her to a minister. I calc'late to take Mrs. Norton home."

"W-al, if the's any difficulty there, Freddie, fetch her out to the farm. Mandy 'n' me'll be glad to have ye till ye kin git settled around. . . . I calc'late we'll be hearin' some more from those brothers o' hern. . . . Sure ye won't have a slice of bologny?"

The young couple declined, and Scattergood smiled. He turned to Pliny. "'Tain't jest the right day for bologny yit," he said; "but the' comes a time in every man's life when he'd ruther have a good slice of sausage than a meal of love and kisses!"

"Seems as though," said Pliny.

"THEY'RE HELL BENT!" says Albert Payson Terhune. "THEY ARE NOT!" counters Harold Bell Wright. A slight difference of opinion, it would seem, between these two famous writers! They are discussing the young people of today—what else would they be discussing under such hot titles!—and next month each man presents his side of the case and leaves the verdict to you. They are writing about the livest thing there is—YOUTH—and they write about it in lively fashion. Both Mr. Terhune and Mr. Wright gave long thoughts to the argument, and each one puts before you stories and facts and opinions that will stir you. There will be no reason for you to sit silently wishing you had something interesting to talk about, after you have read these articles, for they will give you enough conversation to last a long time.

The best gasolines
+ ETHYL =

More power per gallon
A cooler, smoother engine
Quicker acceleration
Less gear shifting

LEADING oil companies throughout the United States and Canada are offering gasoline in two forms. The first is straight motor gasoline. The second is selected motor gasoline to which has been added "ETHYL" fluid. This superior fuel is called Ethyl Gasoline.

"ETHYL" fluid—a patented product containing tetraethyl lead—is a compound developed by General Motors research. It controls the combustion rate of gasoline, thereby delivering more power as the compression of your engine is increased, either through carbon deposits or advanced engine design.

And as for high compression engines—they were made possible through Ethyl!

Today try the best motor gasoline you know with "ETHYL" in it. Drive to a pump which bears the Ethyl Gasoline emblem shown at the right. You will enjoy engine performance such as you have never had before. And the price will be merely the price of good motor gasoline, plus the few extra pennies the "ETHYL" ingredient costs.

Ethyl Gasoline is the yardstick by which all other gasolines are measured.

SETTLE THE PRICE QUESTION BEFORE YOU GO IN TO BUY!

Gurney Athermos All-Steel Cabinet

Decide on Quality Without Extravagance!

Get down to fundamentals when you buy a refrigerator. Unless it is well built to preserve foods properly, it will prove costly at any price. If it includes useless frills that add only to price and nothing to efficiency, it is likewise expensive — to buy it is extravagance!

Both extremes in construction are opposed to true economy. But there is a middle ground — where real efficiency is obtained in a substantial, high-grade refrigerator at a moderate price. And there you find the Gurney—built for long service, to keep foods perfectly, with low ice consumption.

Wood or all-steel cabinets.
50 to 150 pounds capacity.
At your Gurney dealer's.

GURNEY REFRIGERATOR CO.
Dept. E Fond du Lac, Wis.

Free—toy cardboard Gurney refrigerator. Doors open and close. Delights the children. Shows how food should be arranged for most effective refrigeration.

"How much Does a Good Refrigerator Cost?"

Do Young Men Have the Chances Their Fathers Had?

(*Continued from page 19*)

produce an upheaval in the commissioned personnel. A lot of majors, colonels, and generals who had been doing passably well under peace conditions had to step aside—not always because they were incompetent, but because younger men were *more* competent. The severer, sterner tests of war multiplied by a thousand the opportunities of younger officers, and of enlisted men as well.

"Likewise, in business today, the severer tests of leadership imposed by competition are creating vacancies in the executive ranks which are just so many additional opportunities to the younger man. On the Pennsylvania Railroad, as an example, we have adopted the principle that present performance, and not past, must determine fitness for positions. The average age of our division superintendents today is considerably younger than it was twenty or thirty years back. These division superintendents have under them on their respective divisions more men and equipment than has the president of many a well-known road. One of our vice presidents in a most important branch of the service was but forty-five years of age when he was promoted to that position a little more than a year ago.

"In short, no longer does the young man in business need to wait for the man above to die or be retired by age. And in that fact probably is the answer to the question of whether or not these leaders who began their careers a generation or more ago could repeat if they had to start over again. If they are still at the helm meeting what today has to offer, it should be a fair indication that they could. Otherwise, the new conditions would have buried them before this."

I asked General Atterbury to give me concrete illustrations bearing on this change in conditions, particularly as it affects the work of the young man and his opportunities.

"TAKE freight," he replied. "Twenty years ago less than ten per cent of Pennsylvania Railroad freight trains were scheduled. If you loaded your goods, except perishable products and a few high-class articles, at Philadelphia for shipment to Chicago, they might take fifteen days en route, which was good average time for the distance. They might take twenty.

"Today, ninety per cent of our freight trains operate on a fixed schedule. You can ship your goods at Philadelphia with the assurance, barring accidents, that they will arrive in Chicago on the fourth morning afterward. We can tell you the hour they will be there and what train will bring them.

"But go back only seven years: For the first eleven months of 1927 as compared with the corresponding period of 1920 there was an increase in gross tons per train on the Pennsylvania amounting to twenty-two and one-half per cent; there was an increase in miles-per-hour speed of more than twenty-four per cent. And this improvement was accomplished at lower cost, with less fuel, fewer employees, *and with approximately fifty thousand fewer cars in service!*

"These almost incredible advances, which would be shown to be even greater if the figures were up to date, were not the result of chance or magic. They were not the consequence of piling more labor and longer hours onto the workman, because the trend in industry has been toward shorter working days. They can only be explained by the fact that management has been made a science of the highest order. New methods have been found, new machines invented, new short-cuts uncovered, waste effort eliminated.

"In the case of the railroad, for instance, the increase of more than twenty-four per cent in the miles-per-hour speed of trains was not brought about by the simple expedient of telling engineers to drive their locomotives faster. The problem, on the contrary, was one of so arranging the business of the train that it could do in nine hours what it had done in twelve hours, at the same running rate. The increase in speed, therefore, was really a decrease in delay affected by improved methods and scientific planning."

"BUT if fewer men, proportionately, are doing more work, wouldn't that indicate there are fewer opportunities for the young man today to get work?" I asked.

"No. Because wages buy more than they used to buy and this greater buying power is encouraging new industries to develop. The purchasing power of wages paid in America has been computed to be a third greater today than in 1914. The wage earner is spending that third on a radio, an automobile, and luxuries he couldn't previously afford. His increased spending power has opened a new market for manufactured products. It has created new standards of living.

"The census figures show that during the past forty years the increase in our number of business concerns of all kinds has been approximately on a par with the increase in population. But up until 1920, beginning with 1892, the average of this increase was only 23,500 new concerns a year; while since 1920 the average has been more than 56,000 new concerns a year. The figures are rough approximations, due to the difficulty of making exact comparisons from the census tables, but they unmistakably show that the past seven years offered almost double the opportunities for starting business ventures of any previous year as far back as 1892.

"Furthermore, the young man of today has almost six times as many opportunities to become identified with a really large business as he had twenty years or more ago. In 1904, which is the earliest date for which figures are available, there were only 1,900 manufacturing establishments in America that reported an annual output valued at more than $1,000,000. In 1925 there were 10,583 such concerns reporting! I have no doubt that a corre-

The minute you see a Muffet, you'll know. You've met your future. From now on you've a *favorite* breakfast!

Muffin-shaped. Butternut brown. Just fits your cereal dish—the right portion for the morning's appetite.

Look closer. Light as a crumpet! Whole wheat, cooked, drawn to a lacy ribbon, thin as flakes from the fluffiest shortcake. Wound round and round, layer upon layer—three yards of it! Baked. Toasted, both sides.

Taste it! Crisp as potato chips. Crunchy! Crumbles in your mouth. That's a Muffet!

Serve with cream and sugar. Or add fruit, fresh, stewed, preserved. You've calories, body-building minerals, bran, digestibility—*plus* food you'll enjoy any morning in the week!

One Muffet—and you're a Muffeteer!

Tomorrow, win the glory—have the fun—of introducing to your family their first really new breakfast in years. The Quaker Oats Co., Chicago.

sponding improvement took place in other business lines.

"There are no figures later than 1919 dealing with the number of executive positions existing, and those available are also limited to manufacturing. But once again these indicate a trend in the young man's favor. Between 1904 and 1919, inclusive, the population of the country increased, in round numbers, from 82,602,000 to 105,003,000, or twenty-six per cent. During the same period the number of salaried officers reported by manufacturing plants increased from 60,047 to 132,467—they more than doubled.

"NOW, if these figures mean anything at all, a summary of the foregoing would show conditions today are most decidedly in the young man's favor. He should have a third more money to spend than had the youth of but thirteen years ago, making full allowance for present-day prices. He should have double the chance of starting in business for himself, as compared with any of the years before 1920. He should have six times more opportunity to get employment in a big business than had the young man of twenty years back, and he should have twice the chance of becoming an executive.

"However, the figures also indicate the presence of the competition I have mentioned. With more than fifty-six thousand new concerns entering the field annually, and with the growth of big business far exceeding in rate the growth of population, competition is bound to be of the keenest sort. The independent druggist or grocer must face the competition of the chain store; the small manufacturer must sell side by side with a rival backed by millions, who in turn is being elbowed by a giant as strong as he. You discover a new process, or invent a new device, and before the year is out you find a dozen or more competing processes and devices snapping at the heels of your original idea. Look at radio, unknown a few years ago; today fully a score of machines are vying for your favor. If you wear a soft collar, you have a very typical example right on your person of how long an 'exclusive' product may remain exclusive. Several years ago a factory superintendent discovered a way to make a soft collar in a single piece, and a new type of collar resulted that at once gained popular favor. But within six months every principal collar maker in the country had his own type of soft collar out in competition. So it is with automobiles, toothpaste, pianos, and breakfast foods, whatever it is you buy.

"And, furthermore, competition has assumed forms unheard of twenty, thirty, or forty years ago. Manufacturers now compete with the wholesaler by selling direct to the retailer, and even with the retailer by selling direct to you, the consumer. Retailers compete with wholesalers through coöperative buying, and with manufacturers through forming chains and combinations that do their own manufacturing. Cotton competes with wool, silk with both, and artificial silk with all three. Steel, concrete, stone, brick, stucco, tile, and wood are in a wild scramble to build your home; slate, shingles, tar, tin, copper, zinc, tile, and what not seek to roof it for you; and oil, coal, gas, and electricity to heat it.

"In the old days, competition was limited mostly to that of company against company within an industry—that is, the lumber dealers competed with other lumber dealers, the coal man with other sellers of coal, the railroad with rival railroads, and so on. The old wagon builder was in no sense a competitor of the steam or electric railway; but his very vigorous successor, who makes motor cars, motor trucks, and motor busses, is.

"Today, trade is competing with trade, industry with industry, substitutes with the real, section with section. The South challenges New England, the West the East, and with rapid ocean travel and communication the foreign producer challenges all, and is challenged in turn. And all of this, most directly and substantially, has affected the chances of the young man in business, as well as the chances of the older man of continuing in business. It also affects the woman to the extent that she has entered the business field, which is not small by any means.

"Suppose we consider the favorable effects first. Foremost among them, perhaps, is the fact that business today must hunt for ability, and does most assiduously. This was true to a much less degree when I and others of my age started work.

"Forty years ago, even fifteen years ago, a young man at the bottom of a large organization had to do something approaching the sensational to attract the attention of the boss. It required almost heroic effort on the younger man's part to upset the tradition that the oldest man, if reasonably competent, should become foreman, and the oldest foreman should become superintendent. There were exceptions, of course, but this was the rule.

"TODAY, competition has put a premium upon ability, and we are searching for it as untiringly as the prospector does for gold. We are searching for it everywhere—in the college classroom, the employment office, the shop, the office, the street, the newspapers. Some months ago a young man was graduated by an Eastern college with a record that attracted the attention of one of my associates in New York. At once he got into touch with the youth, found that his education was self-earned and that the boy indeed had promise. He tried to interest him in the railroad as a desirable place to start his career.

"The boy knew nothing of railroading. He knew little of general business. Already he had received several offers from other concerns, and he was in doubt as to what to do about them.

"'I'll help you to decide,' said my associate. 'I will see that you are given an opportunity to meet men in various lines of business. You can talk to a banker, a manufacturer, a merchant, an importer. I've already given you an insight into railroading. When you are sure as to what you want to do, make your decision. If it is to be a railroad man, come back.'

"The boy chose the railroad and we employed him. For the next two or three years he is going to be shifted from one kind of work to another, from one department to another, from one end of the road to the other. He is being paid a good salary for a young man, being made acquainted with our business and our problems, being put into contact with

"The acid sprayed into my face"

"I was the last employee of the battery company to leave. As I stooped over the charging line, one of the batteries blew up, sprayed my face with sulphuric acid. The burns were fearful. I applied Unguentine. What wonderful relief! I kept up the treatment. Today healing is *complete.*"

BURNS come to us all. Suddenly. Unexpectedly. In factory or field, on journeys—by our own firesides!

Any burn can become infected. Be ready. Treat it as physicians do: at once, Unguentine!

As soon as you spread Unguentine on, the pain is eased. The burn, germ-free, starts healing normally—quickly. In almost every case, *not the slightest scar remains.*

Use freely for cuts, scratches and bruises, too. Bandage lightly when necessary. At your druggist's—50c. The Norwich Pharmacal Company, Norwich, N. Y.

Really

it's a different KIND of catsup!

Wine of tomatoes gorgeously spiced!

OF course all catsups do not taste alike. For instance there is the flavor which a decidedly individual recipe imparts to Snider's.

This secret recipe, exclusively Snider's for the past forty years, owes its success not only to the careful blending of ingredients but just as much to the *mulling*.

The result is that Snider's, the mulled catsup, has an added zest. This condiment has been well called the wine of tomatoes gorgeously spiced — and indeed it has a "bouquet" all its own.

When it comes to catsup many people who apply intelligent choice to the foods they eat, specify "Snider's."

You will agree with them that Snider's is different

Snider's

The *mulled* catsup

able, experienced men, with the sole idea of developing his ability until eventually he will be of value to the railroad.

"Now I wouldn't call the case of this boy typical, because the boy himself is exceptional; but it illustrates the length to which modern business will go to enlist ability when there is promise of eventual return.

"Here *is* a typical case:

"A locomotive engineer on an obscure Western run had an excellent record for being on time. His engine was always in good shape. He was popular with his fellows and respected in his town. In short, he was a good engineer and *looked* as if he might have ability to go higher. Yet he had proved nothing beyond the bare fact that he was an excellent engineer.

"There was a certain problem on that division to be solved. The engineer was asked to study it and present his solution. Incidentally, the division staff already had a solution. The engineer, unknown to himself, was merely being tested. Following that problem he was given a second, a third, a fourth. He was placed in charge of some men to see if he could lead them. Today he is an assistant to an important executive, and still in development. His own ability is the only thing, barring accident, that will limit his rise.

"WE ARE constantly testing men. A foreman takes a 'vacation' in order that his assistant may be in charge during his absence. A superintendent has subordinates solve problems that he himself has already solved. Promising men are made 'acting' this and that to see how they act under responsibility. Often they go back to their old jobs to remain there for months before promotion comes; often they go back to them permanently, tested but found wanting. But the process goes on.

"Every executive on this railroad knows that before he can be considered available for promotion himself he must have under him one or more men capable of taking his place. It is his duty to find and train those men, and how well he succeeds is regarded as a test of his own executive ability. In fact, the knack of being able to look down into an organization and spot ability there is a requisite of leadership today. Men in executive posts are judged as much by the kind of men they develop as by the kind of profits they produce.

"This search for new material by no means is limited to the immediate organization of a business. It is not uncommon today for the honor students of a university to have a dozen offers of employment from big concerns upon graduation.

"Another fact to the decided advantage of the young man is that his opportunity for advancement today is not nearly so limited as it was some years ago. When I started work on the railroad, there was a tendency to keep a man at the particular kind of work with which he had begun. That is, the opportunities of a machinist were limited to the mechanical branches, those of a clerk to the administrative offices. The clerk had little or no chance to learn the mechanical end, and the machinist was barred from the office end. Therefore, their advancement frequently

Nobody has to drink substitutes now. Nobody needs to give up coffee

—here's one fine coffee that lets you sleep

FRAGRANT and cheery this coffee is—yet you can drink it, even at midnight, and sleep. Kaffee Hag Coffee is a delightful blend of the world's finest quality coffees—but it has 97% of the drug caffeine removed. It does not affect the nerves. It will not keep you awake.

But you'd never guess, by tasting, that the caffeine was absent (caffeine is odorless and tasteless). We extract it by an exclusive process. We leave the flavor and strength untouched. All the quick, bracing effects of coffee remain. They have never come from caffeine anyhow—but from aromatic coffee oils and heat. Caffeine stimulation doesn't even begin until two hours after drinking. Thus, there's no such thing as missing it at meal-time—*though, if drunk, it may keep you awake hours afterwards.*

How welcome Kaffee Hag will be to "substitute drinkers"! To thousands who have been forced to put up with unsatisfying coffee substitutes because they have never before been able to get real coffee without caffeine!

Try Kellogg's★Kaffee Hag. This fine, satisfying coffee will add cheer to all your meals. And everybody can enjoy it unstintedly. All the delights remain—but the harm has gone for good. Doctors recommend Kaffee Hag. Many drink it regularly.

Most grocers carry Kaffee Hag Coffee. Full one-pound cans. Air-tight. Ground or in the bean. Ask for it, too, at hotels and restaurants. On dining-cars.

For just a penny a cup you can try Kaffee Hag Coffee at home. Mail the coupon below for a sample can. We invite you to compare Kaffee Hag with any other coffee you've ever before tasted. Blend for blend. Aroma for aroma. Sip for sip.

Not a substitute—but REAL COFFEE—*minus caffeine*

Wherever there are children ✓✓

✓✓ *there should be a piano*

YOUR children . . . your boys and your girls . . . today they are with you following your guidance . . . tomorrow they are out in the workaday world. Now while they are close beside you is the time to set before them those things that will serve them best in the years to come.

Music is your children's heritage. Those little flashes of rhythm that bubble out of every child are the heralds of a desire to make music.

Encourage them. Give them the chance to learn to make music and by so doing not only will you add greatly to their talents, but you will enable them to get a greater share of the joys of life.

The piano is the natural musical instrument upon which your children should begin the study of music. All authorities agree on this.

A GOOD PIANO, like every other product of quality, is subject to the inroads of time and use. Proper tuning two to three times a year will prolong the musical life of your piano. If your piano is too old, you should consider exchanging it for a new instrument. Don't expect your child to get the most out of music on an antiquated piano.

FREE to Parents Who Have No Piano in Their Home: A four-octave keyboard on heavy paper. A wonderful help to beginners.

Write For These Wonderful Books

Twelve Look-and-Play Piano Lessons for Young People: The simplest piano lesson book ever published. Makes learning the piano amazingly easy. Send 50c.

Everybody's Look-and-Play Piano Book: For those who can't play, but wish they could. Anybody can play the piano with this book. 50c postpaid.

was confined to the limits of their own departments or divisions.

"Then, too, business was more centralized in its control. There were a great many so-called 'one-man' companies, in which the man at the top reserved for himself the exclusive right of decision. He was, in effect, a king without counselors; and if he owned the business, his oldest son was trained to succeed him.

"All of these conditions have passed or are passing. On the railroads of the country especially there has been a decentralization of authority. Decisions of moment no longer are made by one man without consultation with his associates; a dozen men sit down around a table nowadays and each man has his say. About each principal executive in turn is a staff of sub-executives, who also have assistants. Men of promise are being made acquainted with all phases of the business as fast as they grow enough to warrant it. I have already outlined this practice.

"The family-owned, one-man-controlled type of business today is a relic of the past. In your own community you probably can name a dozen such companies that today are managed and operated by men who are employed for their executive ability to conduct the business successfully.

"More and more is the ownership of business passing into the hands of large groups of stockholders, who may be scattered all the way from Maine to California. The stockholders elect the ablest and most powerful of their number to sit as boards of directors. The directors choose a president who is a professional business manager, and whose job is dependent upon his ability to carry on the business efficiently and economically in the interest of the stockholders, the employees, and the company's service to the public. This professional manager can't afford to surround himself with favorites and relatives. The duties of his office are so varied and complicated that it is humanly impossible for him to handle them alone; he is forced to enlist the aid of able associates, and does. Invariably he must find and develop his own aides, and as he wants aides who will be with him through the years ahead, he looks for them first among his younger men.

"THERE is still another advantage the young man has today. Promotions at the present, if they are of any importance at all, generally are made by conference. Personally I would not think of elevating a man to a responsible post on this railroad without first consulting my associates. Some one of my associates might have a better man in mind whom I, inadvertently, had overlooked. They might know more of my candidate than I did.

"At regular intervals the members of my staff and I go away to some quiet place to spend three days together to do little else than discuss personnel. If a man is moving up, we want to know if there is anything that we can do to make him move faster. If he is standing still, or falling behind, we try to discover why. We don't like to see men in whom we have placed confidence fail. Their failure is not only a reflection upon our judgment but it means also that we must do our work over again. We like to see men

Save time, energy and money —don't market every day

The General Electric Refrigerator is unusually roomy and it keeps all food healthfully fresh

IT'S such a relief not to have to go to market every day. Two or three times a week will do the job —with energy and time and money saved—if you have a General Electric Refrigerator.

For even the smallest model is so designed that it can hold a generous store of foods—several days' supply for the average family. And its temperature is just right to keep meats wholesome, milk sweet, salads crispy.

All the models are up on legs. This makes it so easy to keep the floor underneath clean.

You will notice, too, that the General Electric has no belts or fans or drain pipes. All its machinery is hermetically sealed in one steel casing. You will be glad that it needs absolutely no oiling. And your bills for electricity will tell you the pleasant story that this perfect refrigeration is economical.

In fact, now that the fifteen years of experiment in the General Electric laboratories has produced this simple, quiet, efficient refrigerator, there's really no reason for being without the advantages it can give you. Already more than fifty thousand General Electric Refrigerators are bringing new comforts to American homes.

There are many models—at a wide range of prices. Get full information about them by writing us for booklet A-5, which is illustrated and completely descriptive.

THOUGH dentists and dentifrices rally to the aid of modern teeth . . . though tooth brushes by the million work briskly every morning and every night . . . though Science, year by year, bestows upon us new weapons for the fight against dental ills . . *still, something is missing from the picture!*

Where's the help that *Nature* planned? Where's the thing that kept primitive man's teeth in his head—strong and sound—until he died of old age? In other words, where's the kind of diet that benefits teeth?

Missing, alas, from most modern tables! Check up on your own three meals a day if you doubt it. Note that most of your foods are soft—creamy—highly refined. Then recognize your error—and reform!

Replace some of those soft foods with crisp foods that require chewing—that you will delight to chew! Give to teeth and gums the *natural* exercise and stimulation that Nature planned. It's the easiest method—the least expensive method—and the only completely efficacious one! Your dentist will tell you that.

There's one particular modern food that's famous for the benefit it brings to teeth. You've heard of Grape-Nuts. It appears on millions of American breakfast tables every morning—a food deliciously crisp—golden-brown—nut-like in flavor. It tempts you to chew *thoroughly*. And that's why dentists so enthusiastically recommend it.

They recommend it, too, because it's the kind of food that helps *build* and maintain sound tooth structure. A food rich in varied elements. Phosphorus for teeth and bones. Iron for the blood. Proteins for muscle and body-building. Dextrins, maltose and other carbohydrates for heat and energy. And the essential vitamin-B, a builder of appetite . . . Eaten with milk or cream, Grape-Nuts is an admirably balanced ration. And it is one of the easiest foods in the world to digest because of the special baking process by which it is prepared.

Try it tomorrow! Your grocer sells it, of course—or you may wish to accept the following offer:

FREE! *Two servings of Grape-Nuts and an authoritative booklet—"Civilized Teeth and How to Prevent Them."*

succeed, for the greater their accomplishments are, that much greater are our own as managers.

"And this policy of conference is carried all through the organization of the railroad. A brakeman gets the same consideration for promotion in his sphere that a division superintendent does in his. We know that cars and engines and terminals are but the tools of the railroad; the men who use those tools *are* the railroad. In putting men first and in trying to develop them we are building a greater system—and our policy is the policy of every business of consequence today."

"AND what about the other side of the ledger, the side to the disadvantage of the young man?" I asked.

"He must have more education at the outset than used to be considered necessary, or he will be at a disadvantage," replied General Atterbury. "If he is a high-school graduate, good. If he has had business-school training in addition, better. If he is a college graduate, his chances are best, other things being equal. I would say that a college-trained man attains an executive rank about ten years sooner than does the man of similar ability and initiative but limited schooling. That difference of ten years may be most important in later life.

"For example, a board of directors in choosing new officers usually takes into account their possible succession to higher office. The odds are normally in favor of the younger man—not because an older man is too old for the present office, but because he might be too old some years later to be considered for the higher office.

"There are some men, of course, no handicap can keep down. They will find a way to overcome it. Many there are who overcome the serious handicap of lack of education, by taking advantage while they are young of the many ways open to them for self-education.

"Not long ago a young chap asked me for a job. He had been sent to college by his parents, who could well afford to do so, but he had failed to graduate.

"'What was the trouble?' I inquired.

"'Mathematics,' he said. 'I flunked in 'em.'

"'Why don't you try it again?' I said.

"His answer was that he never had liked mathematics and never would; that work seemed more attractive.

"We had no job for him, not because of his deficiency in mathematics, but because of his deficiency in the face of failure.

"One of the school agencies made a survey of one thousand former public-school pupils in Philadelphia to find out why they had quit school before getting all the schools had to offer. It was found that only fifty per cent had left school for financial reasons, whereas the other half had quit because they felt like it. A similar study in Boston disclosed that less than thirty per cent were forced from school by actual need.

"There are so many boys and girls who are getting an education in spite of financial difficulties, there is so much encouragement being offered for education, that it is only natural for an employer to expect the young man to do his utmost to make up for any lack of schooling he may have at the outset. And there

Digitized by Google
Original from UNIVERSITY OF IOWA

is reason for this. If the office boy of today expects tomorrow to be the head of a corporation doing a world business and perhaps controlling the life necessities of half the world's population, he should know something of that world, its people, its geography, and its needs. If he expects to have in his employ, as he will need to have, men who have devoted years of study to fine technical problems, to finance, economics, and those branches of science which find daily employment in business, his fundamental education should at least be as good as that of his subordinates. If he expects to enlist the best minds, his own mind should be as fine as he possibly can make it.

"The pace of modern business is rapid. The young man who hopes to keep abreast of it should come with all of the education he possibly can get. He should know as much about the spirit, atmosphere, and fundamentals of business as he can learn. It will be of profit if he knows something of the laws affecting business, and he should not make the common mistake of youth—of being skeptical of business honesty.

"Yes, business is demanding more of the young man, but not more than the young man of today should be equipped to give. He has more opportunity to prepare himself than had the young man of a generation ago. He is growing up under these new conditions into which he is to enter. His schools are better, his teachers better. He is a part of this new, swifter, competitive life.

"I said the young man's ability must be higher if he is to get ahead in business. By that I mean that the ability he already has should be more intensely developed. Business is not demanding more brains of the young man, but a greater use of the brains he already has."

Things I Can't Understand About Women

(*Continued from page 14*)

I agree with him. Women do not settle a question on the basis of reasoning, but on the basis of their feelings. For example, a neighbor's children may do something which a woman will indignantly complain of. But if her own children had done that same thing, she would have found all sorts of excuses for them.

She doesn't weigh things calmly and judicially. She puts her feelings into one or the other side of the scales. The result is not justice, but the personal prejudice. I confess that I can't understand why women don't see this tendency in themselves and overcome it.

This habit of personalizing and emotionalizing everything is the most serious of the feminine ways which seem so puzzling to us men; for they affect a woman's attitude toward life and toward her fellow beings. Most of the things we "can't understand" are much more superficial.

"I can never get over my amazement," one man said to me, "at the way women will sit at the telephone, for fifteen or

Cool, crisp leaves of lettuce, or romaine, or endive . . . dressed in mild and mellow vinegar and pure oil. How the tender green leaves sparkle and glisten—freshened and flavored with a French Dressing made with Heinz Imported Olive Oil and Heinz aged – in – the – wood Vinegar.

To get the true *vinegar* flavor, vinegar must be aged. We take only the juice of whole, sound apples—and age it in wood from one to two years. It's the only way you can get that mellowness, that aroma—that *flavor*—that you find in Heinz.

Only a real imported olive oil has the true olive flavor . . . You see, Heinz Olive Oil *is* really imported. In sunny old Spain near Seville is the Heinz olive oil establishment. There, from the choicest of the purple fruit that ripens on the olive trees we press Heinz Olive Oil.

For the reputation of Heinz must be maintained. No distance is too great; no method is too troublesome; no time is too long for Heinz in the search for flavor. *Heinz Salad Booklet sent free on request.*

twenty minutes at a stretch, just visiting with some other woman.

"Every man of my acquaintance hates to telephone. To him, it is a necessary convenience, but a pestiferous annoyance just the same.

"But a woman! She will hold the telephone to her ear until you'd think her arm would drop off, talking about things of absolutely no importance at all."

Of course, that is not true of all women. But it is true of a great many of them, whereas it does not apply to men at all. We use the telephone to make appointments and to ask or to answer definite questions. But as a medium of real conversation it is impossible to us. We hate to take the 'phone off the hook. Women hate to put it back.

A GOOD many of the masculine complaints which I have assembled are in regard to social customs. For instance, we men can't understand why every girl wants to have a big wedding—and why all the rest of the women want to go to it! The bridegroom loathes it. The men who attend are dragged there by their wives. And the crowd on the sidewalk outside is as feminine as a ladies' sewing circle.

I said that we men can't understand this difference; yet I think we do understand it. A man may be in love with a girl. He may sincerely want to marry her. But every man, in his secret soul, hates to give up his freedom! So long as he remains unmarried he is his own master. He jokes his married friends about their captivity. He enjoys his own liberty and is proud of it.

Intuitively, he rebels at making a public show of his submission to the undeniable chains of matrimony. He may be a willing captive; but, even so, why make a parade of the act which signs away his liberty? As for the men who attend the ceremony, all they get out of it is a chance to chaff the bridegroom about his lost liberty.

The feminine point of view is, of course, exactly the reverse. The girl doesn't feel that she is giving up a wonderful and precious freedom. She isn't losing; she is gaining. For her sake, a free man is becoming a captive. No wonder she likes to advertise the fact! And no wonder that other women like to witness the triumph of their sex. So, after all, I suppose I can understand this particular difference between men and women.

It isn't easy to understand why women like to go to receptions and tea parties. A man hates it from the bottom of his soul. Of all methods of getting people together, these functions seem to him the most stupid and tiresome. Women themselves admit this. But they keep right on giving these affairs, accepting invitations to them, and dragging their men-folks with them if they possibly can.

Apropos of social functions, one of my friends mentioned a certain feminine trait which I, too, have noticed.

"I can't understand," he said, "why so many women have a special 'company manner.' My wife has it. She puts it on just as she puts on her company clothes. When she is at a party of any kind, she doesn't walk, or stand, or sit the way she does at home. She uses a different tone of voice. She even has a special 'company pronunciation' of words.

* More than an Addressing Machine!

THIRTY-FIVE years ago the Addressograph was merely an *addressing* machine —addressing envelopes from sundry lists of names.

The constantly increasing demands of business generally for more cost-cutting, profit-producing methods made necessary a broadening development of Addressograph equipment.

Year by year new applications and new equipment have been created.

The Profit Analysis Sheet, at a glance, gives some conception of Addressograph's present broad service to the world's industrial, commercial and social life.

Two minutes spent in checking this list will demonstrate to you, and to other executives and department heads in your organization, that Addressograph methods can be used profitably in every department of your business.

If you have thought of the Addressograph as merely an addressing machine, *your impression has been limited to only a fraction of Addressograph's uses.*

PROFIT ANALYSIS SHEET

MORE THAN AN ADDRESSING MACHINE

Check the following uses to determine how you can use Addressograph profitably.

SALES PROMOTION ☐
Speeds out: Announcements, Booklets, Circulars, Envelopes, Notices, Completed Letters, Follow-up notices, Subscription lists, House organs, Catalogs, Bulletins, Price-lists, Post-cards.

***RECORD-Keeping** ☐
Heads up: Bank statements, Cost-keeping records, Inventory records, Invoices, Job tickets, Ledger pages, Machine and tool repair records, Production orders, Stock requisitions, Stock ledger forms, Time tickets, Tabulating machine cards.

***ROUTING** ☐
Writes: Drivers' call lists, Shop orders, Newspaper bundle destinations, Order schedules, Shipping schedules, Drivers' call tags.

***IMPRINTING** ☐
Imprints: Booklets, Blotters, Mailer strips, Short messages on postals, Wrappers, Folders, Swatches.

***SHIPPING FORMS** ☐
Addresses: Bills of lading, Route sheets, Labels, Shipping envelopes, Way bills, Tags, singly or in gangs.

***COLLECTIONS** ☐
Fills in: Bills, Collection Letters, Follow-up notices, Installment collection forms, Meter-reading forms, Premium notices, Public service bills, Receipts, Statements.

***DISBURSEMENTS** ☐
Imprints: Dividend checks, Pay-checks, Pay-roll sheets, Pay-envelopes, Pay-roll receipts, Stock holders lists, Voucher checks.

***PRODUCTION** ☐
Writes: Machine and tool repair records, Time cards, Time tickets, Shop orders, Production orders, Stock requisitions, Stores issues.

***IDENTIFYING** ☐
Embosses or Indents: Metal Directory Plates, Machine Name Plates, Motor Name Plates, Employes' Badges, Shrubbery Tags, Cream Can Tags, Metal Shipping Tags, Metal Labels.

The Addressograph Profit Analysis Sheet itself does not tell the complete story. The Addressograph Research Bureau can place before you a truly amazing set of facts, gathered from the actual experiences of thousands upon thousands of users in more than 3,000 lines of business and non-commercial activities, who use Addressograph equipment for imprinting, listing and addressing 165 distinct business forms. The work is done by Addressograph methods 10 to 50 times faster than by pen or typewriter — errors impossible.

This Research Bureau will gladly make a survey of your business to convince *you* that Addressograph methods *will cut your expenses, bring you more business and increase your profits.*

A request from you will start the survey or bring you detailed information concerning ways in which others in your line of business are using Addressograph equipment.

"She's not the only one that does it. I've watched lots of women; and very few of them, it seems to me, behave naturally when they are in company. Yet *men* don't change their voices and their manner when they go to a party. If you and I should meet at a reception, for instance, we wouldn't begin to 'put on side' with each other. But our wives would! And I can't for the life of me see why."

For my own part, I can't understand why women are so queer about their "company clothes." I wear the same dinner coat for several years. But after my wife has worn an expensive gown half a dozen times she thinks she needs a new one. She says people will talk about her wearing "that same old dress." She may get another which isn't half as becoming; but I believe she would rather appear in an ugly *new* dress than in a beautiful one which she considers old.

She has one evening gown that I especially like. But if I suggest her wearing it, perhaps on a Friday night, she says: "Why, John! I wore it just last Monday! And the very same crowd will be there tonight. People will think I haven't anything else."

That's another thing I can't understand. Why are women always worrying about what people will think? Why don't they do what they like, what they can afford, and what gives pleasure to themselves and their own families? Why do they submit to the dictatorship of "what people will think"?

ONE of my friends spoke of another peculiar feminine trait. He said he couldn't understand why women lay themselves out to make an impression on some person they don't care for, perhaps someone they positively dislike.

I have often seen women do this; sometimes in one way, sometimes in another. For instance, I have seen my wife "spread herself" to be agreeable to some other woman whom she has later characterized as "a horrid little snob." I have seen her do the same thing with a man who, as she afterward admitted, was an intolerable bore. She will overwork to be what she calls "nice" to people with whom she hasn't a thing in common.

I can't understand what satisfaction she gets out of this. Why doesn't she do as men do? We don't struggle to make an impression on anybody and everybody. I want to be liked by the people I respect and who interest me. So far as the rest of them are concerned, I don't mind being a total loss.

Women have a lot of little habits which seem curious to me. Did you ever notice, for example, the careless way they stuff paper money into their purses and wrist bags? Instead of laying the bills together and folding them neatly, they stick them into the bag in loose wads! Then, when they take out a handkerchief, or something else, the crumpled bills come along with it and there is a more or less profuse shower of greenbacks.

I've tried my darnedest to teach my wife to fold her bills, putting those of the same denomination together, with the green faces and the yellow ones outside and the black ones inside. But do you think she has learned to do it? No! and she never will! She says it is too much trouble. She can't see that her way makes

Who's your Tailor?

Digitized by Google

Original from UNIVERSITY OF IOWA

Are you suffering from

New Blade Fallacy?

It's a sort of mental paralysis which prevents a man from reasoning while he shaves. Every man who has it, blindly accepts the idea that a new blade is good because it is new, and so misses getting really fine shaves.

If he would reason it out he'd realize that if an old style razor must be stropped before it is used, a safety blade certainly must. Because a safety blade is cheap doesn't mean that it will do what an expensive razor can't. Think it over.

This is interesting

Fine razors have edges of tiny invisible teeth. Temperature changes, jolts and handling get these teeth out of alignment. That's why a blade pulls. Stropping smoothes them into line and restores a keen cutting edge.

A few turns on Twinplex puts an edge on a NEW blade that is a marvel for smooth shaving. And it's so easy to strop with Twinplex. No fussing—no reversing blade. Just slip blade in and turn—strops both edges at once and reverses blade at every turn, just as a barber does. You can't fail.

30 seconds a day will keep one blade marvelously keen, for weeks of the smoothest shaves you've ever known. Shaving is also easier and quicker with Twinplex, for a keen blade is a quick safe shaver.

You can now buy a Twinplex at any dealer's for as little as $2.50. It pays for itself in a few months and saves more than its cost each year thereafter. Other attractive Twinplex models at $3.50 and $5.00.

Send for the DULL HOUSE and FREE NEW blade stropped

Clever little Dull House solves the problem of disposing of old blades safely. Send 10¢ for it and we will also send you FREE one brand NEW blade stropped on Twinplex, just to show you what real shaving is. Name your razor.

TWINPLEX SALES CO.
1798 Locust Street, Saint Louis

Twinplex Stropper

far more trouble, for me as well as for her, because she occasionally drops a bill without knowing it—and I have to make good the loss.

Speaking of money, I can't understand why women will pinch pennies with one hand and throw away dollars with the other. They give a porter or a waiter ten cents, where a man would give a quarter. I have known women to put a two-cent stamp on a letter when they *knew* it ought to have four cents! They will write all around the edges of a letter in order to save an extra sheet of paper. They will use a pen until the poor old thing can hardly make a mark. They will try to save a cent a quart on milk, or two cents a pound on meat. If they have to pay for a meal at a restaurant, they look for the cheapest thing on the menu. They will shop for half a day, trying to save a few cents a yard on material.

On the other hand, these very same penurious women will pay one hundred dollars for a dress which they won't wear twenty times. They will have the house "done over" at big expense, when it is already comfortable and attractive, just because they want it to be up to date.

Women skimp on necessities and pay lavishly for show. They economize in little things and are extravagant in the big ones. The average man does just the reverse. He doesn't worry about pennies and nickels. But he won't spend a hundred dollars for a suit unless he needs it; and he doesn't want to spend a month's salary on new wall paper, just because stripes have "gone out" and plain tints have "come in," or something of that sort.

IN CONNECTION with restaurants, I have noticed another feminine peculiarity: If a woman is taken to a high-class hotel or restaurant, she will order the dishes she knows nothing about. She wants to try something new. Half the time she doesn't like it when she gets it; but at the next opportunity she will experiment again.

When a man goes to a restaurant, especially an expensive one, he plays safe by ordering things he *knows* he will like. Women laugh at us for taking roast beef and other good old reliables. But when I see them picking at some mess which they can't eat, I think the laugh is on them.

They can't seem to learn that these fancy dishes are mostly made up of tag ends of food which couldn't be served without being doctored with sauces and trimmings. Ordering them at a restaurant is like buying a pig in a poke. I can't see why women will do it.

It's funny about food, anyway. Men are supposed to care more for it than women do; but in their own peculiar way women are more interested in it than we are.

For example, if my wife goes to a dinner, or luncheon, or any place where food is served, she will remember every single thing that was served and just how it was served. I hear her discussing it later with her women friends. She and her sister exchange letters in which each one describes in detail just what she has had to eat at parties.

Can you imagine a man doing that? We may say we had a good dinner; or "good eats" at a bridge party, or at a church supper. But the chances are we couldn't tell what had been set before us. We eat to be fed! Beyond that, we give the subject no thought. But women, in spite of all notions to the contrary, are intensely *interested* in food.

To switch to a more serious matter, I can't understand why women tell so many lies. The feminine conscience seems to be a very accommodating monitor. If my wife receives an invitation which she doesn't want to accept, she will give some excuse which fairly bristles with fibs.

I would think it all right for her to say she had a previous engagement. She *can* have a previous engagement to stay at home if she wants to. But she isn't satisfied to let it go at that. She adds specific details which she manufactures out of whole cloth.

Over the telephone the other night I heard her say: "Oh, my dear! it's perfectly lovely of you to ask me! I'd be delighted to come, but I've already made positive engagements for that afternoon. I have an appointment with the dentist and—and later I've promised to motor over to the country club at Smithtown for tea. I'm *so* sorry, but I don't see how I can possibly get out of it."

After she had hung up the receiver, she still sat there, looking thoughtful and worried. I knew she had balled things up somehow or other.

"Well," I said finally, "what's the matter? The country club is still open; and I don't suppose the dentist is going to the party."

"No," she replied, frowning; "but perhaps his wife *is* going. And if Mrs. Blank tells her why I couldn't come, and if she mentions it to her husband—"

"Precisely!" I remarked unsympathetically. "Why do you get yourself into these tangles?"

"I have to give *some* excuse," she said.

"I don't see why you didn't simply say that you couldn't come. That's what I do when I refuse an invitation."

But she wasn't listening. She was figuring on how to manage the dilemma into which her fibs had got her. It seems to me that women are always doing this sort of thing. They will tell a lie to get out of an unpleasant situation and then they have to tell more lies to escape the consequences of the first one.

ANOTHER thing that puzzles me is the fact that so many women have the "martyr complex." My own wife, thank goodness! isn't afflicted with it; but I infer, from what I hear and observe, that it is a common feminine trait.

When a man comes home at night, why does his wife begin to pour out her woes? She makes a dead set for sympathy by telling him how troublesome the children have been, how hard she has worked, how the servants have annoyed her, how late the butcher was, how the furnace didn't heat, how the cleaning woman failed to show up, and every other disagreeable thing she can think of.

I suppose she imagines that he has been having a glorious time at his wonderful office, or wherever he spends the day. And she wants to dramatize herself by showing the contrast between his care-free existence and her troubled one.

As if he didn't have troubles and worries and annoyances of his own! I know there are women, like my wife, who don't have

1858 - 1928 - 70th ANNIVERSARY

How things have changed since '58 !

Who so hardy back in 1858 to dream as he stepped into his coach and four that a new day would see time and distance shattered by radio, automobile, airplane and other facilities of this breath-taking age?

In those days no reputable carriage painter would guarantee delivery before six weeks . . . now a first-class Berryloid job can be completed in 48 hours. Long-oil, slow-drying varnishes are being replaced by varnishes that dry in hours, not days, or brushing lacquer finishes ready for use in 30 minutes, while the quickened tempo of modern life has forced the development of new finishes of every kind to meet new demands.

Berry Brothers, Inc., has seen these sweeping changes, has, in fact, played a leading part in their inauguration. Seventy years young . . . this company has set the pace . . . each year a milestone, not a millstone.

But while the modern cry is for speed and more speed, the ideals of craftsmanship fostered by the founders of this business, Joseph and Thomas Berry, still prevail. Each new Berry product is based squarely upon a wealth of experience . . . each must answer the standards of excellence these men established 70 years ago.

Manufacturer of Berry's Brushing Lacquer, Liquid Granite Floor Varnish, Lionoil Floor Enamel, Luxeberry Enamel, Luxeberry Wood Finish, Berryloid and other wear-resisting finishes.

Pictures that Satisfy— or a New Film Free!

This Ansco film dispenser is your assurance of fine, fresh, film. Look for it when you buy.

FINE, sure film that you can depend on *under all circumstances* comes to you in the Ansco Speedex package—backed by an unqualified guarantee which is entirely without precedent in amateur photography.

This guarantee, packed with every roll of Ansco Speedex Film, entitles you to a new film free if *for any reason* you are inclined to criticize results. The guarantee means just what it says. It insists: *You must be satisfied.*

In announcing the new, improved Speedex which makes this sweeping guarantee possible, Ansco undertakes also to help you, personally, get better results with your camera. You are urged to write direct to Ansco at Binghamton about any of your picture-taking problems. Every letter will be promptly and thoroughly answered by men who have made a life work of amateur photography.

Speedex, the guaranteed film, is sold practically everywhere—in drug stores, camera stores, prominent hotels and department stores.

ANSCO
SPEEDEX FILM

There's a clearness and sparkle noticeable in Speedex pictures that explain Speedex quality better than all the words in the world. Because it is suited to the widest possible range of light conditions, it adds an extra margin of certainty to every exposure you make.

ANSCO PHOTOPRODUCTS, INC. BINGHAMTON, N.Y.

this martyr complex. And there are probably some men who do have it. But taking the two sexes as a whole, women are the ones that resort to this angling for sympathy. Men would rather be helped to forget their troubles.

I can't understand why women seem to be always on the defensive. They act as if they were *expecting* a slight, or an attack, or an injustice. They are always imagining that someone hasn't treated them just right, or that someone's manner wasn't cordial enough.

My wife spends days in wondering why she wasn't invited to some little party. She knows that she herself doesn't *always* invite *all* of her own friends; but when *she* isn't asked she thinks she has been intentionally slighted. Sometimes, when she is invited with one group, she is offended because she wasn't asked with another one. I can't imagine a man finding any grievance in that sort of thing.

Another thing I can't understand is why women are so unpunctual. When a woman makes an appointment for a certain hour, why doesn't she get there on time instead of being fifteen minutes, or half an hour, late? I will add this: I can't understand why we men ever *expect* them to be on time. But that seems to be one hope which springs eternal in the masculine breast.

Here is another puzzle which I give up: Why do women, when they try to work together in clubs and committees, so often get to wrangling about something? I belong to a big club, of which both men and women are members. There are two entertainment committees: one composed of women, the other of men. The women are continually having friction among themselves, whereas the men work together in perfect harmony.

I CAN'T understand a woman's passion for looking in shop windows. And I can't see why, when she goes into a shop to buy a certain article, she wants to look at everything else in the store. If I want a necktie, I go and buy it. I don't spend an hour looking at socks and shirts and hats and a lot of things I have no intention of purchasing.

I can't understand women's mania for antiques. They will buy some ugly and battered piece of furniture just because it is old, when they can get a new article, better and more beautiful, for less money. The really fine old things are all right. What I object to is the junk that is being palmed off on our women-folks as "antiques." I hate having it around the house—especially when I know, to my sorrow, what the darned stuff cost.

Oh, yes! Speaking of furniture, here's another item of complaint. I can't see why women regard appearance, rather than comfort, in selecting furniture. In most of the houses I visit, there is scarcely a comfortable chair to sit in.

And the tables which some women buy! Spidery things which fall over at a touch. Dining-room tables that have as many legs as a centipede. The only way you could sit at them in comfort would be to have detachable legs of your own.

I went with my wife not long ago to buy a high chair for the baby. We inspected the stock and she chose one which, I admit, was very pretty to look at. Apparently the idea of *safety* didn't occur to

Digitized by Google Original from UNIVERSITY OF IOWA

her. But to me, a man, that was the one essential. Taking out my pencil, I pressed lightly on the front edge of the chair—and the thing toppled over!

"It's a lovely chair," I said. "It has only one defect. It would kill the baby! Otherwise it seems to be quite all right."

Wouldn't you think a mother would be looking for just such possibilities? But, being a woman, she never thought of them. To a woman, furniture is primarily something to be *seen*. Comfort and utility are secondary considerations.

IN THE matter of women's ideas about clothes, of course every man is hopelessly at sea. Why do they wear furs in summer and chiffon silk stockings in winter? Why do they put such queer contraptions, miscalled hats, on their heads? Why do they wear any fool thing that is foisted on them in the name of fashion? Why are they so endlessly and vitally interested in what other women wear?

Can you imagine three or four men getting together after a dinner and discussing in detail the clothes which their masculine friends wore on that occasion?

"Dick Jones had on a blue tie with black stripes. Awfully smart, but I don't think he looks as well in blue as in brown, do you? With his eyes he ought to keep to the tan shades."

"Yes; especially as tan is so much newer this season. Did you notice that Jim Brown had two buttons on his sleeves. I thought they were wearing only one. By the way, are you having 'cuffs' on your new trousers?"

Such a conversation between men is inconceivable. Yet women have an insatiable eagerness for these sartorial postmortems. Their afterthoughts concerning a dinner party are about clothes and food. A man remembers some information he received, or an interesting discussion of some subject.

This reminds me of another feminine trait. I believe women pride themselves on being good listeners. It probably will be a severe jolt to their vanity to be told that intelligent men find them very poor ones.

Being a good listener involves something more than merely keeping still and letting someone else talk. A wooden image does that! But you would not class it as a "listener," good or bad. The trouble with most women is that they don't listen with their minds! You can tell this, in the first place, by the expression of their eyes: either dull and inattentive, or else a mere surface pretense of interest.

Except in frivolous small talk, you get no come-back from most women. They are clever enough to know that a man likes to talk about some subject with which he is familiar. They are adroit in getting him started. But having done that they think he is like a talking *machine;* needing nothing except to be cranked occasionally by a perfunctory question or remark. They seem to think that a man wants no response except, "Really! how interesting!" Or, "I never understood that before!" Or, "You certainly are wonderful!"

As a matter of fact, they are *not* interested, they *don't* understand, and they are simply trying to flatter him by saying he is wonderful. They are not paying the

Miracles? No!

Just plain facts about hair health

You know the two types: Those who accept unsupported statements at their full face value. Those experienced people who look around the corner of a statement to spot the facts behind it.

You know also the two types of talk about hair: Unsupported promises of miracles; sure remedies for baldness; hurry-up cures for dandruff. And then, there are plain facts like those which follow—for instance, facts buttressed by authority:

Doctors have been studying the care of the hair and scalp for a great many years. And, for one thing, they long ago learned that one of Nature's most effective remedies is pine tar—pine tar from pine woods where the very air crackles with health.

But in the early days there was a difficulty; pine tar alone could not conveniently be applied to the scalp. So 60 years ago Daniel Packer began to incorporate pine tar in a soap—Packer's Tar Soap. Ever since, physicians have been recommending Packer's—largely because of the healthful pine tar in it.

If you talked to a doctor today about guarding your hair, he would probably tell you something like this: In the care of the average head of hair there is just one real secret. Wash it frequently with a fine soap like Packer's and—massage the scalp.

A hair soap, of course, should yield a mountain of lather—at the double-quick. Packer's does! And a great many men tell us that the piney fragrance of this willing Packer lather makes a shampoo fun—really!

So, if you suspect magic promises but wish to give your hair as fine and intelligent care as it can get, outside of special treatment by your doctor, we suggest that you get a cake of Packer's Tar Soap in its metal box and begin to give your scalp the benefits of weekly scalp shampoos.

Send 10c for Sample and Manual

For 10c (stamps or coin) we will send you a generous sample of Packer's Tar Soap and a copy of our new Manual, "The Care of the Hair." This profusely illustrated 28-page book presents the most scientific thought on the care of the hair; suggestions for the care of dry hair, oily hair, falling hair and dandruff. Fill in coupon, clip and mail.

THE PACKER MFG. CO., INC., Dept. 6-E

slightest attention *with their minds!* So far as an intelligent responsiveness is concerned, they might as well be wooden dummies.

Women are always complaining because men like to get off and talk among themselves. I can't understand why they don't see the reason for this. Men discuss things, exchange opinions, ask and give information, compare ideas and experiences. Men listen with intelligent curiosity. They want to *get* something out of what you say to them. Women, as a rule, listen only with their ears—if that!—and reply only in empty phrases.

There is one thing about girls which seems queer to me. A girl will eagerly accept invitations from men who don't interest her, who bore her, or whom she definitely dislikes. But a young man doesn't trail around with girls who bore him to death! He discriminates. He would rather stay at home than go out with some girl he "can't stand." But the girl, apparently, would go out with *any* man, rather than not to go out at all.

I have saved till the last the thing which seems to me the most incredible of these peculiarly feminine traits. For most of those, which I have mentioned, I can find some explanation. But this one, I think, is not only inexplicable but also inexcusable.

I cannot understand why women are so lacking in a decent sense of loyalty toward the men who have paid them the honor of loving them! A man enshrines a woman in his heart; asks her to marry him. No matter who he may be, this is the greatest gift he can offer her. He is putting his most intimate and guarded feelings at her mercy.

Wouldn't you think that she would feel some obligation to protect him, even if she sees fit to refuse him? Wouldn't you think she would have too much delicacy to gloat openly over the gift he has brought her—especially if she refuses to accept it? Wouldn't you think that, after he has so greatly honored her, she would at least respect his sensibilities?

But she does not! She "confides" to her friends that she "might have had him" if she had been so inclined. He is just one more scalp to be displayed for her own aggrandizement. She has won a victory and she wants everybody to know about it. But as for me, I think she is a rotten poor sport in the great and solemn game of human hearts.

The man who boasts of his sentimental conquests is despised not only by women but by other men as well. The woman who does it is, it seems to me, really envied by women. To men, this lack of loyal reserve is—well, it is one of those feminine traits which we can't, for the life of us, understand.

Things I Can't Understand About Men

(*Continued from page 15*)

understand in men. As you know, I am a business woman. I always have my lunch at a restaurant; and when I am in a hurry, which is pretty often, I go to a well-known quick lunch place where we are served by waitresses.

"Hundreds of men eat at the same place; and the thing that seems queer to me is the attitude of so many of these men toward the girls who wait on them. They are always exchanging personal and bantering remarks with them. If it isn't the rush hour, they like to have the waitress stand and talk with them. The conversation between them is often accompanied by challenging smiles and all that sort of thing.

"I have watched men talking to the girls behind a cigar counter, or at a telephone switchboard, and there is this same personal attitude on their part. Not in all cases, of course, but very, very often. It is true, even of educated and well-bred men, who are as much superior to these girls as a cultivated woman is superior to the ordinary waiter.

"Imagine such a woman exchanging personal banter with the waiter who serves her! Imagine any of *us* having even a mild flirtation with the check boy in a cloakroom! Yet our own husbands, as likely as not, have, and show, a personal interest in the cloakroom *girl* who helps them on with their coats.

"In most cases," I suggested, "their attitude doesn't really mean anything. It is perfectly harmless."

"Yes—in a way," she replied. "And yet I think it must lower a man's self-respect. If I did the same sort of thing—but I couldn't! And that is the incredible difference between men and women."

"Well," said another member of the group, "here is one thing that puzzles *me*. My husband, I think, is like most men; he won't make an effort to be agreeable to people unless he likes them. He thinks I am queer because I try to be nice to everybody.

"Women have a different point of view. We realize that the social side of life is necessary and therefore important. We *must* be thrown with other people. We have to get along with them, and they with us. It is part of the game of human existence. Then why not try to put some teamwork into it?

"But men, who pride themselves on being good sports in far less important games, seem to have no sporting instinct at all in this really vital one. If they draw a partner they don't like, they simply sit back and refuse to make any effort. They won't observe the basic rules of every game: to go through it cheerfully and without putting unfair obstacles in the way of the other players. I can't understand men's selfishness in refusing to do this."

WHEN we had finished commenting on this masculine lack of social sportsmanship, I asked if there were any more contributions.

"Yes," said the woman beside me; "I can't understand why men *love* so to give information! Especially to a woman! A man is never so happy as when he is telling what he knows, or thinks he knows. Most women are wise enough to understand this. Ask a man for information, about anything under the sun, and nine out of

Is there *health* in your Refrigerator?

Yes! A Good Ice Refrigerator for

$35 to $70

Ask about the new Leonard "Frost-Cold"—in white or oak finish; cork insulated; some with porcelain interiors. A good refrigerator, well-built, really saving of ice and food.

The most important thing in your refrigerator is something you can't even see! You can buy pure ice and the finest of food, but Health begins with the refrigerator itself . . . in a fresh, sweet, wholesome interior . . . in airy dry-cold . . . in a gleaming-white, seamless, porcelain lining. There's Health in a Leonard Refrigerator — it's like a clean china dish, inside and out!

Leonard is supreme among refrigerators — more of them are sold every year than any other kind. See the wide selection of sizes, in porcelain, wood and steel, at one of the prominent stores in your city. Or let us send you a book of styles with new collection of illustrations showing the very latest in refrigerator design and finish. Address

Something new in refrigerator design! Leonard introduces the French border finish—replacing the usual nickel trimming on certain of their porcelain refrigerators. You'll like the trimness and simplicity of it. Also see the new model (for electric refrigeration) with convenient storage space for dry vegetables —or to house complete electric mechanism if desired. And with all the Leonard improvements this year, it costs no more.

ten of them will have a beautiful time enlightening you on the subject.

"But how they do hate to have a woman tell *them* anything! The other night, my husband brought an old college friend home to dinner with us. The man is now a wholesale dealer in coffee; and of course I had sense enough to get him started on that subject. The result was that he talked most of the time. When he left, he assured me that he didn't know *when* he had spent so pleasant an evening—and I'm sure he meant it!

"The one break in his enjoyment was when I made the mistake of telling *him* something *he* didn't know. On the steamer last summer, I happened to meet a man who had spent several years in China. By the way, he naturally reveled in imparting information to me about the Orient! Any man would.

"As a great compliment—which I appreciated—he always asked me to share his afternoon tea; a special blend which he imported, himself, from China. He explained very interestingly how it was grown and picked and cured.

"I was reminded of this when our visitor the other evening was talking about the way coffee was grown and treated. I thought he would be interested in what I knew about tea. I ought to have learned, by this time, that he not only wouldn't care to hear it, but also that he would instinctively resent a woman's knowing more than he knew about anything, except a purely feminine matter.

"WHY do men feel that way? Why are they so inconsistent? They complain because women, as they say, are superficial and shallow. They make rather contemptuous jokes about our ignorance. Yet every intelligent woman knows that, if she wants to please a man, she actually has to pretend that she has the mind and the education of a twelve-year-old child.

"Men frankly admit that they don't like a 'brainy woman.' Yet they like brainy men. They can forget themselves long enough to listen to other men's experiences and ideas. Why can't they have the same attitude toward a woman with a good mind?"

"You'll have to wait at least a few hundred years for that millennium," I said. "For centuries men had a monopoly of education and mental training. They knew more than women knew, and they enjoyed this superiority. They want to keep it now. And one way in which they try to keep it is by frowning on any sporadic cases of 'braininess' in women.

"They know we try to please them. That is one of our ways of 'playing the game,' as we said before. All right! They will show that it does *not* please them to have us as clever as they are, or to know as much as they do. And it works pretty well!

"But what I *can't* understand is this: Why does a man hate to ask for information when he actually needs it? For example, every summer my husband and I spend several weeks in motoring. As we go to a different section each time, we are unfamiliar with the roads and other details of the route.

"Half a dozen times a day we are in doubt about something: which turn to take at an intersection, or which of two routes is in better condition, or whether we will have to detour, or how often a certain ferry runs.

"To stop and ask a few questions seems to me the most natural and sensible thing to do. But not to my husband! Not to the chauffeur, either; nor to any man who ever motors with us! I can't account for it, except on the theory that a man has a sort of ingrained vanity which makes him want to prove that he is self-sufficient. They hate to admit that there is anything they don't know."

"NOT always!" laughed another woman. "There is one thing a man *never* knows; and that is, where to find what he wants. At least, in his own home. I've been married only five years; but it seems as if my husband has asked five thousand times: 'Where are my clean handkerchiefs?' They are always in the very same drawer. I invariably put them in a certain corner of that drawer. Yet for some occult reason a grown man, with two perfectly good eyes, never can find them.

"He can't find anything! A hammer, or a wrench, can lie in plain sight, positively staring him in the face; yet it is absolutely invisible to him."

"This is all very interesting," said one of the women, pushing back her chair; "but I must be going. Henry likes me to be at home when he comes from the office. For that matter, I like it too.

"But he has another trait," she went on, "which I sometimes wish he hadn't. He feels terribly abused if I don't get up and have breakfast with him. The funny thing about it is that he reads the morning paper during the entire meal! He doesn't open his mouth, except to put food into it."

The mention of meals gave a new impetus to the discussion.

"I simply cannot understand," one of us exclaimed, "why men are never ready to come to the table when a meal is ready. I've tried having a warning bell five minutes before each meal. I've tried going around, myself, and telling my husband and the boys to be ready in ten minutes. I've tried giving them as much as *twenty* minutes' notice. But nothing can cure them of the habit.

"My husband suddenly remembers that he wants to call someone on the 'phone; or he decides that he must go down and see to the furnace; or he has been so busy reading the evening paper that he hasn't washed his hands since he left the office; or he simply has to finish reading the baseball scores; or he must go and put on a clean collar. If it isn't one thing it's another. And of course the boys do just as their father does.

"But there's one exception," she went on sarcastically. "That's when a man brings an unexpected guest home to dinner and fidgets like a nervous hen because, naturally, the meal is late.

"Men always blandly tell their wives not to go to any 'extra trouble' for these impromptu visitors. Yet husbands would be sure to complain if their wives didn't do them credit by getting up a good meal and having it well served.

"Anyway, since they do know that women don't sympathize with these 'pot-luck' ideas, I can't understand why they won't see the matter from our point of view. Housekeeping is our *business*. We take pride in showing that we can do it well."

COMING TO NEW YORK?

Don't Be A Stranger—Live Like A New Yorker

NEW YORK is a vast city—over six million people—over 400 hotels—makes a stranger feel like a stranger unless—

Unless you make your home at the McAlpin—where you can feel at home—with the comforts of home and—

And, when you say, "I'm stopping at the McAlpin!" every New Yorker and visitor *knows* your hotel, for—

For among the many hundred hotels, the McAlpin is outstanding—in popularity and prestige the McAlpin maintains its leadership year after year.

And this needs no explanation. There's a superiority of service—an excellence of cuisine—a predominance of courteous friendliness—genuine comfort and convenience that appeals to every discriminating traveler. As for economy—where else may one enjoy such exceptional hospitality at such reasonable cost?

Wire, write or 'phone your reservations—to me personally if you prefer.

Sincerely,

Arthur L. Lee

Managing Director

Am interested in summer trip to_____
Please send me detailed information and free folders. "California Picture Book," "Indian-detour" and "Grand Canyon Outings."

As you see, I gathered quite a harvest of ideas from that afternoon's conversation; and later, from various sources, I gleaned some additional material.

As many as half a dozen of my friends said they could not understand "why a man likes, in other women, things which he would not tolerate in those of his own family."

They gave examples of this peculiar phase of masculine inconsistency. For instance: A serious and middle-aged man will show admiring interest in a girl who is elaborately beautified. Yet he will raise a domestic tempest if his own daughters resort to make-up to enhance *their* attractiveness.

A man may admire a woman who dresses daringly. But the average man, when it comes to his *wife's* manner of dress, is once more inconsistent. In fact, it is a bit hard to satisfy him, because he wants the impossible.

ANOTHER thing which passes feminine understanding is why men are so easily fooled by a woman's flattery.

"I admit," one woman said to me, "that *we* enjoy being flattered by a man. It's an agreeable sensation. We feel as a kitten does when it is rubbed the right way; and, like a kitten, we purr responsively.

"But most women don't take it seriously. They know that it is merely part of the social game. Just a pleasant little duet; not intended for anything except to leave an agreeable echo in the memory.

"But a man seems to swallow feminine flattery, hook, line, and sinker! You can flatter him out of indifference, out of being bored, even out of being positively angry. No cloud on his horizon is proof against the sunshine of a woman's admiration—or her *pretended* admiration.

"Another thing I can't understand is that they think women are the susceptible sex when it comes to love. I should judge that at least several million married men must realize, by this time, that a man is absurdly susceptible.

"It is a fact—to me it is a very pathetic fact—that men's hearts keep 'open door' so far as women are concerned. Open hearts and closed minds! That describes the average young man; and only too many older ones! I know a score of men every one of whom is married to a woman he couldn't possibly have loved if he had kept his wits about him.

"It gives me a real heartache to see the tragic and lifelong consequences of this easy masculine susceptibility. A man, who might have been so happy and contented, finds himself married to a woman who, even if she does not make him actually miserable, prevents his life from being more than a drab shadow of what it might have been.

"If men would analyze themselves, they would discover this absurd susceptibility—and set up some defenses. Compared with women, they are as helpless as babies."

In contrast with this rather serious angle, some of the things I uncovered are decidedly superficial. For instance, one woman said: "I can't understand why men are so upset when the household bills come in at the beginning of every month. They *know* the bills are due! Yet for some inscrutable reason, they always act as if this regular settlement was an unforeseen catastrophe."

"I can't understand," said another woman, "why men are so cantankerous when they are sick! I would almost rather have a really serious illness myself than take care of my husband when he has merely a cold in his head. When he has had to stay in bed a few days, I am a perfect wreck. He keeps everybody in the house, but chiefly me, busy waiting on him. And yet, normally, he is the easiest man in the world to get along with."

One woman said: "It amuses me when men say that women are inveterate talkers. I work in a business office; and I know that the men—those who are at liberty to do it—spend hours over their luncheon! I see them myself, when I go to a restaurant. They talk, talk, talk! Men will talk anywhere, at any time, at any length, provided it is about something they are interested in.

"Of course, they shut up like clams if the talk does *not* interest them. As a rule, when a man and a woman are together, it is the woman that keeps the conversation going. But if she didn't, there wouldn't *be* any conversation! Unless she is shrewd enough to 'draw him out' on some subject that interests him, she has to do all the talking, or else allow the occasion to be a perfect flop."

One of my friends said: "I can't understand why men hate to have a woman beat them at some game. Before my husband and I were married, I learned to play chess because I knew that he enjoyed it. Somehow I managed to play as good a game as he did; rather better, in fact, for I often won.

"At first, he explained this in various ways. I had made a lucky move without really knowing what I was doing; or he had a headache and wasn't up to his usual form; or he had been thinking of business and his mind hadn't been on the game. Any explanation—except the true one, that I had outplayed him.

"As time went on and I continued to win more often than he did, he began to make excuses for not playing. Often I would persuade him to have a game, and would deliberately allow him to win. He didn't even suspect this. He would crow over me and joke about my stupid moves.

"I found that I was getting to have a secret contempt for this trait in him. I knew I mustn't allow anything like that to grow up in my mind. So gradually I professed to lose interest in chess and finally we stopped playing. My husband thought it was because he had become more than my match. Even to this day he occasionally chaffs me because, as he says, I wouldn't play for the 'mental exercise and training' but only for the pleasure of winning! Naturally I don't like to have him think that. But I can stand it and he *couldn't* stand knowing the truth! So there you are."

ONE of the most interesting comments I received was in regard to an opinion which almost all men express about women. They say that a woman "takes everything *personally*"; that she thinks every remark is intended to apply to her; that she can't discuss any subject without bringing herself into it.

Low summer fares in effect May 15. For example, round-trip from Chicago to San Francisco

$90.30

See whole Pacific Coast for about $20 more.

Public Golf Course at Lincoln Park on the edge of the Golden Gate. Thirty-two other convenient golf courses on San Francisco Bay.

America's coolest summer city—

San Francisco's world-famed Chinatown

Plan to spend your vacation in and about this gay summer city. Heat prostrations are unknown. Average *maximum* summer temperature only 65°, and it doesn't rain.

San Francisco's hills, thronged harbor, Latin quarter, Chinatown, cosmopolitan hotels and flower-filled streets will fascinate you. Every member of the family will find a complete assortment of things to do. Superb golf courses, model yacht harbors, bridle paths and playfields look out over the Golden Gate and blue Pacific. It's the tennis capital of the country. Numerous conventions; glorious musical events.

Thousands of miles of motor highways and many scenic rail lines radiate from San Francisco. The Big Trees, Yosemite, Lake Tahoe, and the wonders of four national parks and many fruitful valleys are within a few hours by rail or motor. Del Monte, Carmel-by-the-Sea, and the Redwood Empire will beckon you. Shrines of romance everywhere. You'll see where Sir Francis Drake beached his little galleon 350 years ago; where Spanish padres built the Missions; where gold was panned by the argonauts of '49. Cool beach and cosy mountain resorts, brilliant metropolitan hotels and snug cottages offer accommodations at a variety of prices.

Plan now to take this double-profit vacation at gay, fun-loving, beloved San Francisco. You'll have change of scene, healthful recreation and sound insight into the California that may some day be your home. Very low round trip fares on all railroads will be in effect beginning May 15th, or you can motor over national highways or come by steamer via the Panama Canal. Ask your local travel agent.

Please fill out and mail the coupon. Californians Inc. makes no charge and seeks no profit. It is maintained as a co-operative public institution simply to supply authoritative information.

writing ease! You'll get the full meaning of those two words when you use a Dixon's Ti-con-der-oga. It has made itself America's favorite five-cent pencil.

DIXON
"TI-CON-DER-OGA"
An extraordinary five cent pencil

Made in the U. S. A. by
JOSEPH DIXON CRUCIBLE COMPANY
Pencil Dept. 161-J Jersey City, New Jersey

One woman, in referring to this, said: "Men accuse women of not reasoning about things. They say we discuss everything from a personal angle; that we are not logical.

"I don't understand why they can't see that they argue from theories while we argue from facts. They deal with generalities; and they don't seem to realize that generalities are always vague and often false.

"We women don't like to argue from abstract examples. We seem to feel that a specific case gives us something definite and tangible; a solid footing of some sort. And we naturally take the facts with which we are familiar; those out of our own lives.

"To me, it seems more 'logical' to argue from the standpoint of my own personal experience than from what I *imagine* other people are experiencing. I think women's opinions are interesting and valuable for this very reason. They are based on a group of facts, even though the group may be a restricted one."

Another woman said: "I can't understand men's unreasoning loyalty to one another *merely as men*. It is as if the entire male sex had entered into a secret alliance; expecially against the opposite sex. Very rarely, at least to a woman, will a man openly and flatly criticize another man's actions, even though he doesn't approve of them.

"The finer a man is himself, the more keen seems to be this sense of loyalty to his fellows. He will defend their peccadilloes and even excuse their crimes. They all stand together in a sort of inviolable compact. Women judge other women on their merits. In their own minds, men probably judge other men in the same way. But they don't pronounce the verdict in open court as women do."

I CAN'T end this list of things we women don't understand about men without including a few of an entirely different nature. Most of the responses I received were like those I have set down here: half-impatient, half-amused complaints of masculine traits and ways. But occasionally the impatience and amusement would vanish completely and I would get a spontaneous and sincere flash of wondering admiration.

"If you want to know what I really can't understand about men," said one woman impulsively, "I'll tell you! I can't understand how they have the courage to face their responsibilities in life. To me it is incredible that they are willing to accept the burdens they have to carry.

"Any man could get along easily and comfortably if he had only himself to take care of. He would be free to enjoy himself. He could have every dollar he earned. He could go where he pleased, consulting only his own inclination.

"If I were in his situation, it seems to me I would be too selfish, and too much of a coward, to marry. Even if I were willing to give up my freedom, I should be *afraid* to make myself responsible for the care of a wife and a family. I'd hesitate for fear I couldn't swing the job. That nine men out of ten have the sheer nerve to do this is a marvel to me.

"I CAN'T understand their courage in taking the inevitable hard knocks that come in the course of business, or whatever work they do for a living. I can't understand their fighting spirit. I can't understand how they can be knocked down, figuratively speaking, then come back grimly and go on with the struggle.

"I can't understand the dogged persistence with which so many men go on, year after year, plodding at the treadmill of routine work. Some of them know that if they could cut loose they might be happy and successful in another sort of job. But in taking on the care of a family they have shackled themselves hopelessly. They can't be free to follow their dream.

"I can't understand why some men submit to half a lifetime of nagging. Between you and me, I'm pretty positive that I would break *those* shackles! I can't understand why more men don't do it. I'm terribly afraid I should manage somehow to make my escape.

"Of course, being a woman, I see the other side of the picture; the annoyances, inhibitions, injustices, suppressions, and injuries that make life hard for women. But you didn't ask me about that. You asked me the things I can't understand about *men*. And I'm just mentioning a few of the qualities in them which amaze me; the ones which help me to forget and forgive the peculiarities which otherwise would make me as cross as the traditional wet hen."

What I Can't Understand About a { Woman / Man

Prize Contest Announcement

HAVING finished the companion articles, "Things I Can't Understand About Women," and "Things I Can't Understand About Men," you probably wonder why on earth the authors omitted other very obvious follies, faults, inconsistencies, and quirks from their criticism. All right, go ahead, and put the missing quality or qualities into words. This should be a popular contest, as everybody has something on his or her chest concerning the opposite sex. Here's a splendid opportunity to get it off.

For the best letter of not more than four hundred words we offer the following prizes: $30, first prize; $20, second prize; $10, third prize. Competition closes May 20th. Winning letters will appear in the August issue.

Address "Men and Women" Contest Editor, THE AMERICAN MAGAZINE, 250 Park Avenue, New York City.

Contributions to this contest, and any enclosures, cannot be returned, so you must make a copy of them if you want to preserve them.

Manuscripts and inquiries not connected with the contest must be sent under separate cover to the Editor of THE AMERICAN MAGAZINE.

Joe Kennedy Has Never Liked Any Job He's Tackled

(*Continued from page 33*)

business I knew, unless semi-pro baseball is a business. I turned down several offers to make a little money playing for teams about Boston. Somehow I didn't relish capitalizing what little local fame my playing for Harvard had brought me. I was actually on the point of going back to the candy store, determined to learn that business, save my earnings and enter it on my own account, when another chap and I had a bright idea while taking a ride on a motor-bus rubberneck from Boston to Lexington over the Paul Revere route.

"The bus was almost empty and the lecturer, bored by his job, seemed to welcome the opportunity to talk with two youngsters. Although his conversation led to my first venture into business on my own hook, I'm forced to record that as a lecturer he wasn't much. Neither was the bus driver. If there were any bumps in the road that he missed, it was by oversight.

"WE LEARNED that the lecturer and driver were hired by the owner of the bus, and that the owner was going out of business because his last season had been poor and the prospects for that season were not bright what with rainy weather and a dearth of sight-seers. He confided that, in any event, he was through with his job. Then my friend suggested that this might be something I'd like to do—spieling history through a megaphone. The shabby appearance of the lecturer wasn't inspiring, and when he told us his wages were $18 a week the job wasn't made any more attractive. But I had to make a start. My friend and I went to see the owner of the sight-seeing bus, and to our surprise he offered to sell it to us on part payments. So my friend, who could drive, went in with me. Our joint capital was $600, and before the end of the season we had paid $1,200 for the bus and split a neat profit besides."

That was another thing Joe Kennedy didn't like until he tackled it. For three years in open weather, he lectured on that bus while his partner drove. It was one of a small fleet of sight-seeing buses operating from Faneuil Hall. Not an impressive-looking fleet, not even a reliable fleet—for the early motor-bus days were punctuated with sudden and extended stops. But the two young business men made their bus distinctive. They painted it cream and blue with the name "Mayflower" on it in noble black letters.

The second year they added another bus, and after the third year Joe Kennedy, who can still repeat verbatim the two-hour talk with which he instructed wide-eyed visitors from all parts of the country, had saved $5,000. He sold out his interest because he had another idea. Meanwhile—"I learned a great deal about human nature from that sight-seeing bus," he says. "It was quite as

So Many Now Prefer The Cunard Cabin Way To Europe . . . Especially The New 1928 Service

Going the "cabin" way to Europe means traveling . . . with every modern convenience . . . but on the more leisurely 7½ day boats . . . more moderate in price because more moderate in speed.

So great is the demand today among intelligent people for this type of ship, Cunard announces a special new cabin service, at rates from $152.50 up.

Two Cruise Ships . . . The Scythia and Laconia . . . Now Take You The Cabin Way To England

Even as cruise ships these two were noted for their beauty and luxury . . . the Beau Brummels of the sea! Now popular demand puts them into the Cabin Service during the Summer season . . . the same de luxe rooms and service . . . with a brand new moderation in price!

Every Modern Comfort On The "New" 1928 Caronia and Carmania

Over half-a-million dollars have just been spent on these two famous boats . . . adding new conveniences . . . a "grooming-up" process to bring aboard such comforts as hot and cold running water in every room . . . real beds . . . the luxury of glass-enclosed decks . . . winter gardens, etc.

Spokane

Famed For Its Scenic Beauty

NATURE has been kind to Spokane. On all sides majestic mountain scenery and fertile fields, with hundreds of lakes nestling at the feet of pine and fir-clad hills. Coursing through the very heart of its business district—the dashing cascades of the Spokane River.

Capital of the Mighty Inland Empire

Extending West from the Rockies to the picturesque Cascades and South from the Canadian Rockies to the Blue Mountains of Eastern Oregon is the Inland Empire, richer in its lumber, mineral, agricultural, and hydro-electrical resources than any territory of equal size in America. There are eight transcontinental Railroads serving all of the United States lying west of the Mississippi River. Five of these center in Spokane!

Where Things Are Doing!

Great development is under way. Eastern capital is being attracted by the millions. New factories are being established. Unprecedented increase in all business lines. Erection of modern business blocks rapidly changing its skyline.

See Spokane

Be sure to come to Spokane and see what is happening. Cast your lot with the 1200 new families who located here during 1927.

America's most scenic trip is through the Pacific Coast Empire where "Nature Smiles A Thousand Miles".

Write for beautiful pictorial booklet.

much a part of my education as the years spent at Harvard. Passengers didn't take the ride just for fresh air or the thrill of motor driving. They were interested in history, and I let them have it. I made special studies of Paul Revere, dug up every record I could find in the Boston libraries.

"I wrote my lecture and measured the number of words I could deliver slowly and distinctly during the ride so that every passenger could hear me. I studied the faces of these sight-seers, Americans of all origins, but principally from small towns, eager to obtain a first-hand lesson in history by traveling along a famous road.

"That $5,000 capital of mine had been earned by riding and talking ten hours a day, in summer and early fall much longer than that. During the winter months I had made a small venture in real estate; something I could do single-handed without having to adapt myself to the routine of a job. Real-estating was not very profitable to me in money, but it gave me an insight into business that guided me to the right road for a career.

"I saw, even in my limited dealings, that, sooner or later, the source of business was traced to the banks. Mortgages, liens, and credits negotiations on real estate were a fascinating mystery."

KENNEDY planned, with his $5,000, to take a banking course in a reputable business school. Harvard had started one at that time, and it was inviting to an alumnus. Before taking this vital step, young Mr. Kennedy took one more vital. He got married—to Rose Fitzgerald.

"That," says Joe Kennedy, "although it sounds like old stuff, was the best thing that could have happened to me. It gave me a sense of responsibility that made me abandon, for the time being, my ambition to be my own boss in my own business. To support a family I saw that I would have to get a foothold in some established business where livelihood was secure and progress probable. If education held any advantages for a man, I reasoned, it was in professional life, more than in operating sight-seeing buses, worthy as that work may be.

"Banking ranked as high as any commercial profession. It was the basic business profession."

So, much as he disliked giving up what he considered an independent form of money-making, Joe Kennedy decided to become a banker, by bowing to routine and beginning at the bottom.

"I was careful to choose a ladder with more than one rung," he says, "because I knew that banking could lead a man anywhere, as it played an important part in every business."

He might have started with a clerkship in any of the larger Boston banks.

"But I had friends," he says, "who had started as bank clerks and remained clerks not because they were dull but because they made their jobs routine, instead of making routine a part of their education for better jobs."

Joe Kennedy told himself that the best way to learn all the routine of banking was to be a student of all banks, and not a minor functionary in some particular bank. Therefore he took and passed the civil service examination for bank inspector, and entered the banking department of the State of Massachusetts at $1,500 a year.

"I held that job for three years," he says. "It wasn't easy to be limiting my income to $125 a month when I knew I could make more elsewhere. My wife was game. She had been accustomed to luxury in a fine home; but she came with me to a modest apartment in Roxbury, where our first two children were born.

"Inspection work took me to all parts of the state and gave me an opportunity for a field course in banking of many kinds; in mill towns, fishing towns, and the bigger multiple-industry cities. I learned that the country banker serves his community as intimately as the country doctor; indeed, that the banker everywhere is consulted when financial illness sets in, even more quickly than the doctor when physical sickness occurs.

"We make a mistake when we call money hard cash. It's lively and fluid—the blood of business. When a business has sufficient money, that's healthy blood pressure: too much money can become high blood pressure, and too little money, anemia, when transfusions may save, although not always. And the banker is the business doctor.

"I found the work fascinating—too fascinating. In the three years devoted to it I passed up several chances of good jobs with sizable banks, which would have given me an earlier start in my life work. I preferred, then, the daily adventure of contact with all manner of business problems."

Like many youngsters who think that energy and industry are sometimes unnoticed, Joe Kennedy awoke one morning to receive a pleasant surprise. The board of directors of the Columbian Trust of Boston sent for him. "They told me," he says, "that they were looking for a young and energetic president. The prospect of this grave responsibility scared me. Yet it was better to start as president of a bank than as a clerk. So I took the job, although it was with considerable trepidation."

HE HAD not been installed as the youngest American bank president for very long, and had just grown into the habit of refusing interviews, when something happened that gave his reputation a tinge of the sensational:

Appointed by the city to be a director of the Collateral Loan Company, he rather surprised watchers of appointments deemed political by taking the job seriously. So seriously that before long he found enough grounds to conduct an investigation into the affairs of that semi-public savings institution. As he reports it:

"Two of the bank accountants were detailed to assist me, and became alarmed when they saw the thorough nature of the probe. Higher officials asked me what difficulties I was encountering. I told them that I would not proceed with employees surrounding me, and demanded that they let me into the bank at night and leave me with nobody but the night watchman. For three nights in succession I went over the books, and on the fourth day had gathered evidence which created a stir when it was made public."

Original from UNIVERSITY OF IOWA

This was a cleanser for Boston savings banks.

"With increased income, my wife and I bought a home," Kennedy continued. "There were four young Kennedys by that time. We lived moderately. Although president of a prosperous bank I was still learning things fast at the age of twenty-eight, and one of the things I learned was that an officer of a bank doesn't get rich unless he happens to be rich before he becomes an officer. I learned that private banking is far more profitable than public banking.

"Yet, when three years later, the next step came, and the Hayden-Stone Company, one of the largest private banks in New England, invited me to join them as general manager, I was again afraid at the size of a job. But I took it, little as I liked the sacrifice of a bank presidency that I had come to love.

"Nobody could help liking to work with Galen Stone, the head of that concern. He was one of the noblest figures in American business."

But we are a little ahead of our—and Joe Kennedy's—story: Guy Currier, New England attorney for the Bethlehem Steel Corporation, had been frequently asked who and where was striking executive ability in Boston and environs. The war had loaded them with contracts, and they needed brains even more than brawn. Guy Currier told Charles M. Schwab, whose name in those days meant ships in English, whatever it may have meant in German, that Joe Kennedy was the man needed. Mr. Schwab hired him.

"The Bethlehem Steel Corporation had contracted with the American and Allied Governments for the building of destroyers and repair of minor warships at the Fore River yards. Fifty thousand men were employed there."

WHEN Joe Kennedy went into that job it was as commander in chief of a sizable army. He had his habitual diffidence in the face of a great task; but he pulled through by sheer industry and energy.

A sample of the speed at which the Fore River plant worked under his direction was supplied when a British submarine, H boat, commanded by Captain Carson, limped into the yards.

"In Halifax," Captain Carson told Kennedy, "they said our repairs would take a month."

"We'll beat that," said Kennedy.

Within two weeks the submarine nosed out of Fore River to sea. But she hadn't gone far when she began to sink. Her seacocks had been opened. Captain Carson accepted the misadventure sportily. Kennedy took it grimly. Leaving spy hunting to more excitable persons his men within two days had the craft seaworthy again—beating the Halifax time limit by several days.

Pressure of war work exacted its penalty. Days merged into weeks and weeks into months. The war went on. The Fore River yards steadily turned out ships and repairs—always on time. The red-headed young man directing the vast organization spent night and day in his office and among his men. Then, with the suddenness of a simoom, the 1918 influenza epidemic swept the yards. Joe Kennedy flung himself into the task of caring for mounting casualties. He hired halls, built and equipped dormi-

Wonderlands of Breath-Taking Beauty

The Great White Throne in Zion National Park from the Royal Trail

Zion-Grand Canyon National Parks
Bryce Canyon · Cedar Breaks
Kaibab National Forest

America's newest, most colorful vacation land. America's greatest combination scenic tour! In this far-flung frontier region are tremendous canyons, sublime in form, exquisite in color; vast chasms filled with tinted temples, thrones and castles from all the ages, and peopled with life-like statues vivid with changing colors in the daily play of light and shadow.

The beautiful and the bizarre, the grotesque and the grand here are mingled to form an immense new recreation land of bewildering variety, undreamed loveliness, and delightful summer climate.

And there are prismatic plains, stately forests filled with deer and other wild life, quaint Mormon villages, prehistoric ruins, wild horses. You'll meet interesting people from all parts of the world.

It takes only five days for this enchanting Union Pacific tour after leaving your Pullman at Cedar City, the gateway. Shorter tours to individual regions. Season June 1 to October 1.

Handsome modern lodges with de luxe accommodations including the beautiful new Grand Canyon Lodge, at Bright Angel Point; commodious easy-riding motor buses, smooth highways. Miles of scenic horseback trails.

Low summer fares and famous trains to all the West via Union Pacific, and low side trip fares to Zion-Grand Canyon en route Yellowstone, California or the Pacific Northwest.

Ask about Escorted All-Expense Tours.

Union Pacific travel experts who know the West will gladly assist in planning your itinerary according to the time and funds available so as to give you a maximum of sightseeing.

. . . . . WHEREVER GOLFERS GATHER
Vulcan holds the spotlight

FLASH a set of VULCAN Clubs where golfers gather . . . see eyes light with admiration—eager hands reach out! There's a reason. They are clubs created rather than manufactured. Heft a VULCAN! Its feel inspires an easy confidence. Swing it . . . and know how sweet a club can play—how obedient to rhythm.

There's a new-day appreciation for fine golf clubs—an enthusiasm for that closer feeling between club and player. VULCAN has set a new standard.

The STAINLESS Set of eight matched irons. Modeled after famous Scotch hand-made irons.

Now *every* golfer may have matched irons of custom-made quality and distinction. . . . VULCAN STAINLESS Sets, from famous hand-made Scotch models. And wood clubs of the same character and distinction can be had for a moderate price. . . creations of rare wood, gleaming metal, ivory and tempered steel that win your everlasting confidence at first sight! Clubs alive—responsive—eager to send your ball straight down the fairway without an inch of hook or slice.

A SET O' THREE
Matched Woods—Driver, Brassie, and Spoon. Finer and truer clubs have never been made.

What wonder that, wherever golfers gather, spontaneous approval greets these fine clubs. Get your hands on a set of VULCANS! You'll want them for your own. Your Pro or Dealer has them, or will gladly get them for you. Include his name when you send for VULCAN'S 1928 Catalog.

tories. In his city of fifty thousand workers five thousand were stricken. When the plague reached its crisis, Charles M. Schwab personally visited Fore River to study the methods Kennedy had employed to meet it. He stood at Joe Kennedy's desk and beheld a drawn young man nervously smoking more than was good for him.

Under Schwab's firm insistence he took a rest—went to a health farm for three months of baseball playing. The war ended, and Charles Schwab tried to get him to transfer to Bethlehem, Pennsylvania. But Joe Kennedy liked Mr. Schwab, not his job. He went back to Hayden-Stone, and there remained until Mr. Stone retired, three years ago.

"THEN," he narrates, "with that variety of experience to serve me, I knew the time had arrived for me to do at thirty-four what I had been determined to do at twenty-four—be my own master in my own business.

"So I took a bold step and announced that I had launched my own private banking business. The day he received the notice, the managing editor of a Boston newspaper came to see me. He had a friend, an important figure in industry, whose business was threatened by a combination of brokers. They were depressing his concern's stock, and to offset this aggression a delicate and far-reaching campaign, involving vast resources, was needed.

"I was told that five million dollars in cash would be at my disposal to finance operations. If ever I was scared, it was then. After two days' discussion with my wife I took the assignment. For four solid months I lived in a New York office, watching every tick of the stock tape, buying stock at strategic moments, scouring the country for blocks of it, until, finally, enough was bought to defeat the onslaught on my client.

"Several of us emerged wealthy men. At thirty-five I found myself with a competence, six children, something of a reputation; but no real job. Canvassing the field I discerned one promising opening, which to me was not attractive—motion pictures.

"As a banker, several motion picture men had approached me for loans, never with success. I held the business suspect. Yet I knew one concern that had a tempting market which had been practically lost through bad management. I investigated, and found that this business was controlled by English capital. English pounds sterling to a value of seven million dollars had been sunk in it, with no prospect of ever rising to the surface.

"Again Mrs. Kennedy and I discussed the matter.

"I feel sure I can take this thing and make a go of it," I told her.

"Why not?" she said.

"I don't like the business. Motion pictures are not my idea of a sound and progressive career."

"All the more reason," said she, "that you should get into them."

"That settled it. Three days later I was on my way to England, after an exchange of cables. There I met the board of directors of the Film Booking Offices and made them a flat offer of $1,000,000 for the business. After an extensive palaver they declined, and I returned to the United States relieved, if anything, that somebody had decided for me that I should not enter the motion picture business.

"There I was mistaken, for within a month Lord Inverforth walked into my Boston office, where I was busy doing nothing, and announced, in that quiet but decisive way English business men have, that his company had decided to reconsider my offer. Before he left Boston I had control of one of the largest and most unprofitable motion picture concerns in the world."

The morning he stepped into the New York office Kennedy confesses that he felt like running away from the job.

"But I soon found that the picture business, attuned to an extravagant note, was amenable to ordinary business arithmetic. The trouble with many concerns, like my own, was that employees occupying positions parallel to positions in other lines were vastly overpaid. It was no uncommon thing for accountants to receive $20,000 a year, when in other business they graded from $5,000 to $10,000.

"My first problem was to change that, which was easy. My second was to find an exclusive field in a rush of high-powered competition, which was not so easy. But I remembered the passengers on our sightseeing buses from Faneuil Hall to Lexington. Producers were fighting to get their pictures on Broadway, New York, and State Street Chicago. I concentrated on getting and keeping Film Booking Offices' pictures on Main Street."

WITH the result that after two years a moribund concern that sold out for less than one seventh of its capitalization is one of half a dozen flourishing big motion picture companies in America, numbering among Kennedy's acquisitions the high-salaried motion picture star Fred Thomson, who received $350,000 a year.

"It took a long time for my distaste for this job to wear off," said Kennedy. "But what helped most was the fact that I could make my family partners. From the beginning I determined that Film Booking Offices would produce only clean pictures. One director, a high-priced man, put in what is known as the sex punch. One of his pictures went before my first board of review—Mrs. Kennedy and the seven Kennedys. They didn't like it. The director objected to veto; but he was given the alternative of changing the picture or his job. He accepted revision.

"Another time, when Red Grange's services were offered to me, I had doubts. I went home and asked my sons whether or not they'd like to see Red Grange in a picture. Their vote was unanimously yes. We engaged Grange."

He works that way. For example: There had been almost interminable discussion as to whether or not the General Electric Company and the Radio Corporation of America should make some motion picture alliance. Vocal pictures had arrived: these companies were more than platonically interested in them. And television was sufficiently practical to puzzle the shrewdest prophets as to its prospects. A movie tie-up was desirable, and there were candidates.

Two men stood eating oysters at an oyster-bar on Park Avenue, New York. They were David Sarnoff of the Radio

Corporation and Joseph P. Kennedy. Before the first shell was cracked, their business had not begun. Before the last oyster was swallowed, F. B. O. pictures and the Radio Corporation were partners.

And the feverishly gossiping world of motion pictures had hardly time to digest this revolutionary item of news before it became known likewise that F. B. O., supposedly theatre-poor, had tied up with Keith-Albee, the great vaudeville chain. To top this, came a call from Pathé, possibly Kennedy's one effective rival in his particular field of pictures, that he act as their advisory executive. And the headlines that bore this news dwarfed another but—to Joe Kennedy—much more important item: That little Jean Kennedy had put in an appearance to be the fifth girl and eighth child of the Kennedy clan.

Joseph P. Kennedy, still red-headed, blue of eye, and still waiting for his fortieth milestone to come on the road he has chosen, makes a portrait of a man happy in his job.

"I like it," he says. "It's part of the life of the people and gives a man some high mark to aim at every day of his life."

Likewise, it provides him with what he has never had before, to the degree he wanted it—family life with the nine Kennedys: Mrs. Kennedy; Joseph, 12; Jack, 10; Rosemary, 9; Kathleen, 7; Eunice, 5½; Patricia, 4; Bob, 2, and baby Jean.

I WAS privileged to spend a day with all the Kennedys at their summer home on Cape Cod. (In Riverdale, New York, there is a mansion that manages to contain them during the winter months.) Young Joseph and his brother Jack, expert boatmen for their years, had dragged their dory to the beach and were reading on a porch, when suddenly they dropped their books and their two red heads bobbed back to the boat. They put out to sea with an off-shore wind blowing. And we soon saw why. A sailboat was upset three miles out, with a black speck on its white bottom. The black speck was a lad in his late teens, who would surely have been drowned but for the alertness of the Kennedy youngsters.

They resumed their books on the porch. But the day's incidents were not ended. An ambulance bell clanged along the beach road. From it stepped Joseph P. Kennedy, his red head bandaged. Riding from New York his car had collided with another; but he had preferred home to hospital. His children surrounded him, while Mrs. Kennedy answered the insistent ring of the telephone. Boston newspapers had heard of the two accidents and demanded details.

"Oh, forget it," Kennedy bade his spouse. "I've come home for the week-end."

And during the evening, watching this young man at his hearth with a robust and somewhat vociferous band of youngsters around him, clamoring for his personal opposition at checkers and dominoes and other games, he nutshelled the moral he draws from his business career:

"A rolling stone may gather no moss; but it gets polished and molded until it rolls into the right place, when, if it's wise, it sticks and stays."

Southern California's Coast—from Palos Verdes

This summer...a trip abroad in your own America

NO OTHER section of the nation, perhaps no other one part of the world, presents so much to make a vacation pay dividends of lasting joy as Southern California. Within a few miles or a few hours of Los Angeles' exquisite new City Hall is everything the Alps, Riviera, Sahara or Capri can offer!

Truly, this is your dream land—right here in America! And, to it all, Los Angeles is the gateway. Every road leads to romance, adventure, mystery—to uncommon, luring entertainment. You will always be going somewhere—beaches, mountains, orange groves, mountain lakes like Arrowhead and Big Bear, palm-lined canyons, Old Spanish Missions, "Symphonies under the Stars," movie-land! Every interest point is quickly accessible.

No rain will mar a single moment of your visit. Day temperatures are moderate, *with low humidity*. You will sleep under blankets at night. Bring light wraps—sure.

Los Angeles is the Pacific Coast metropolis. It is delightfully metropolitan. Luxurious hotels—and more moderate priced ones—great theaters, restaurants, amusements of every description meet with every wish. Los Angeles County is rich in natural resources. Last year its agricultural products approximated $95,000,000.

Right here is the Outdoor Sports Capital every day in the year. Close by are 65 *ever* green golf courses, Country Clubs, tennis courts everywhere, mountain bridle paths, ocean-lake-upland fishing, nearby mile-high mountains for climbing.

And the beaches! A short ride from Los Angeles and you are in the midst of the "Riviera," with delightful oceanside cities giving you the keenest aquatic sport you've ever known! Sea-sledding, surf boards, canoeing; yachting, motor-boating—right off the shore in the placid surf of the gleaming Pacific.

Memories of your trip to Southern California will last a lifetime. Consult your nearest railway ticket agent immediately about special low rate fares, May 15 until October 31, and about reservations. While here you may see the entire Pacific Coast at small extra expense.

Fill in and mail the coupon at once for an authentic 52-page vacation book. Start making plans now.

DOG BOOK SENT FREE

If you own a dog you should own this book . . . "Your Dog." It tells interesting facts about dog life that every owner should know. Explains dog diseases, their symptoms and treatments. Contains chapters on feeding and general care. Mailed free on request.

Man's Greatest Friend

. . . deserves only the best in medicines

MORE than a half century ago H. Clay Glover was a pioneer in the study and treatment of dog ailments. Since that time this company has ever kept pace with the great forward steps in veterinary science and thus has kept faith with all true lovers of dogs. Today finds Glover's Imperial Dog Medicines setting the world's highest standard in preventative and curative animal medicines. We are sharing with the U. S. Government Drug Laws the responsibility of protecting the public against fraudulent medicines. In this standard lies your only assurance that you are treating your dog as he deserves—with the best medicines that science can devise and technical skill compound.

At This Time Of Year . . .

your dog's health will be improved by Glover's Condition Pills. Their tonic and digestive properties will stimulate his appetite and build up his strength.

There is a Glover's Dog Medicine for the prevention and treatment of the common ailments of dogs. Below are listed a few which every dog owner should have.

H. CLAY GLOVER CO., Inc.
Dept. A, 119 Fifth Ave., New York, N.Y.

Free Advice By A Famous Veterinarian About Any Matter Concerning Dog Health

Our Veterinarian will personally advise you concerning the health, care or feeding of your dog and kennel sanitation. There is no charge for this service. In writing be sure to give full particulars concerning the dog's age, breed, sex, symptoms, etc.

The Most Interesting Family I Know

FIRST PRIZE

When Trouble Came These Children All Pitched In

MY MOST interesting family consists of Jim, James, Jack, and Jasper, and Ruth, Helen, Eleanor, and Maude. They have the unusual name of Smith. Their home is of low-spreading architecture, boasting an old piano, fireplaces, haircloth furniture, and cupboards full of old blue willow-pattern china. The housekeeping is immaculate; but the rugs are threadbare and the lace curtains darned. This house is glowing with sunshine, the kind which shows in the eyes and smiles and voices.

The father graduated from a medical college and brought his young wife to a college town in the Middle West. Practice came, and the children enjoyed a happy home. Then came disaster. The father was paralyzed by a falling tree. Long invalidism depleted the bank account. But there was a beehive of busy children ready to help. Their invalid father was their mentor and guide. Their mother was their joy-bringer. Several of the children had almost finished college when the disaster came, and they helped to educate the younger ones. Eleanor, by teaching, put Jasper through medical college, and Jim helped Ruth to become a nurse. Helen had a wonderful voice, and everyone helped her. The youngest baked pastries and sent money to her.

Loyalty! Why, the Smith children would die for each other. And love! It blossomed in kindly deeds. And hope! It never died in their hearts.

It was a coöperative family—all loved to serve one another. One son is already a famous physician, and Helen is an opera star.

On holidays they "fly" to the old nest and, in the firelight, tell stories of when they sold horseradish by the glass, made pastries, and milked the neighbor's cow.

C. B. K.

EDITOR'S NOTE: If C. B. K. will forward her address a check will be mailed her immediately.

SECOND PRIZE

A Family That Lived Up to Its Name

WE BECAME acquainted with the Welcomes when my husband and I spent our vacation in an abandoned house in the country. One night I was frightened at some unaccountable noise, so the next evening we traversed the half-mile to our nearest neighbors to see if we could engage a room in which to spend the remaining nights of our sojourn.

The house was commonplace-looking enough; but the three people residing beneath its weathered shingles were not; and they taught us a never-to-be-forgotten lesson in true hospitality and unselfishness. They made us feel that we were not only welcome but that we were conferring a favor upon them; and not one cent would they take for the pleasant room with its high post bed and plump goose-feather pillows. They showered us with garden stuff and flowers, and gave us cranberries, maple syrup, pork from their pork barrel, and cake and doughnuts from their Saturday baking.

It was plain to be seen that Mrs. Welcome's mother was the ruling spirit of the hill. Clad in a bright blue percale wrapper which set off her equally bright blue eyes, and with a gingham apron tied about her spare waist, she literally trod the high places, and though she had her share of infirmities, not once did we hear her complain about anything. She would listen in over the party telephone with a frank disregard for onlookers, because she loved, and was genuinely interested in, the eight families on the line.

Two huge dogs also belonged to this family, and thirteen cats, a most vociferous flock of geese and ducks, and fat pullets and horses and cows and pigs, and a pet hen named "Archie."

L. K.

THIRD PRIZE

We Love to Spend an Evening With the People Next Door

WE WERE slow in showing even friendly tolerance to the family that moved in next door, for the members of it seemed almost too care free and spontaneous, and altogether a new species. They numbered five: four brothers and a sister, all grown up.

One was a big, strong young man who spent half his time tramping the woods or playing furious tennis, and who played the violin or banged the punching bag with equal ease and skill. An older brother was the exact opposite, being tall and studious, and a younger brother had just returned from the Canadian Ambulance service. The fourth brother, Hugh, was not the oldest, but the family plainly centered about him. A chauffeur carried him to and from the car, for he had been a victim of infantile paralysis. His snapping black eyes and hearty manner belied any weakness, however. He was a judge, and had been dean of a law college.

What a delight and inspiration they were when we really got to know them! To spend an evening around their fire with music and jolly comradeship was a privilege indeed.

They actually put into practice the ideal of personal freedom n their family life. Any member could change his mind at a moment's notice. Money was seldom mentioned, but was often used to express appreciation, as when fifteen one-dollar bills were hidden about the house by Tom, and his sister was finding them for weeks.

Once Hugh showed us a book of poems written by his father when a missionary in China, and gave us a clearer picture of that unselfish, delightful comrade of their childhood. It explained somewhat their gift of the merry heart.

H. C. T.

"Tell Us About the Game!"

(*Continued from page 27*)

artfully contrived. A Spanish interpreter stood at my side with head set strapped to his ear. Through this he got the Spanish version coming directly from Havana. So he listened to President Machado with one ear and to me with the other ear. With his hands, which I carefully watched, he controlled the tempo at which I read, and thus kept me even with the orator in Havana. That is why we finished together.

With this over, Lady Luck had her opportunity to do us a good turn when President Coolidge spoke. I say Luck, though it was partly luck and partly the foresight of one person—a woman—Miss Bertha Brainard, the remarkably efficient program manager of WEAF. On the morning of this conference, as she awoke, a sudden alarm took hold of her. What if something should go wrong while Mr. Coolidge was speaking?

By the time she got to the office, she was so troubled by this foreboding that she spent the morning getting from the press associations an advance copy of the President's speech. That copy was in our studio when Mr. Coolidge was introduced down in Havana. There was a burst of applause, the President delivered the usual salutation and then—a burst of static, and Havana left us flat. But Miss Brainard's precautions had been well taken. And so, after a hurried explanation to the radio audience, I began reading the speech. I had got about half way through it, when suddenly there came a sputter, and then the well-known voice of Mr. Coolidge streamed into our studio and out over the air. But this is where our luck saved us. Of course he had been talking all the time in Havana while I had been reading his speech in our New York studio. And when his voice came to us he was at precisely the same sentence as I was, and all I had to do was to step out of the picture and let the President resume his own broadcasting without the audience of the air losing a single syllable.

EVERYONE who listens in to radio performances must be struck by the constant appeal of announcers and artists for letters. Of course that is a form of applause. It is the only kind of applause which the radio artist can get, and it helps him to know whether he is being really listened to or is being "tuned out" when his contribution starts to filter in through the loud speaker in the sitting-room. Of course at our station we get hundreds of thousands of letters, and you may be sure that these letters are carefully watched.

One of the things these letters have taught me is the extraordinary way in which radio is broadening the interest of our people. When the Democratic Convention of 1924 was over and I got back to my work at the studio, immediately a tremendous avalanche of letters began to descend upon us. When I had examined a good supply of them, it was perfectly plain to me that thousands of people were all excited over the Presidential campaign who had never before given any attention

A Splash! A Tingle!

Then all day face comfort from the

AQUA VELVA

After-Shave!

The *after-shave!* Important as the shave itself!

Aqua Velva was made expressly for this purpose. A splash of it on the newly shaven skin gives a sparkling tingle. Wakes the skin and livens it. Makes you feel and look smartly alert.

Aqua Velva helps to heal tiny nicks (often there, —often unseen). Protects the skin. Keeps it flexible, youthful, by conserving its *natural* moisture.

Made by the makers of Williams Shaving Cream, with 88 years of study of what is best for beard and skin behind it, Aqua Velva *keeps* the skin all day as perfectly conditioned as the Williams lather *leaves* it.

Well groomed, exacting men find Aqua Velva now-a-days indispensable for face comfort, *Face Fitness!*

50 cents for a 5-oz. bottle. Or Free Trial Size if you will ask for it.

W. F. YOUNG, Inc. SPRINGFIELD, MASS.

whatever to politics. So I remarked to a friend that I felt sure the vote in the election would be a record-breaking one.

Now, everyone remembers that that campaign was not a tremendously exciting one. There was very little doubt in advance about what the result would be. It could not compare in intensity with the Harding-Cox battle four years earlier. The bitterness engendered by the war; the deep feeling about the League of Nations, both for and against; the strong loyalties and equally strong enmities aroused by the strong character of President Wilson, which brooded over that fight—all served to stimulate a natural interest in the outcome. And yet, in spite of all that, the vote in the Coolidge-Davis contest was two million four hundred thousand greater than in the Harding-Cox campaign. Practically thirty million votes were cast, the greatest in our history. And I think this was largely attributable to the immense interest stirred by the radio, beginning with the remarkable show staged by the Democrats in the McAdoo-Smith fight. And I think that the effect of the radio this time, on the interest, the number of votes cast, and the result, will be even more obvious.

THIS is evident not only in politics. When I began as an announcer, I imagined, when I was describing a baseball game, that I was talking to a crowd of men and boys—a duplicate in character of the crowd you see in the bleachers at a ball park. But I soon began to learn this was not so. After the world's series games between the Yankees and the Cardinals I got the following letter:

> Just a wee word to thank you for the broadcast of the Yankee-Cardinal game. We all enjoyed it very much. . . . Be assured of the poor prayers of ONE NUN for the speedy recovery of the tired overworked voice.

Thus I found, to my surprise, that I had a group of nuns in my radio baseball audience. And this was not the only such group. One Mother Superior has written in to me several times to tell me about my account of baseball games. I got many letters from ministers—one in particular saying that, while he had never attended a baseball game on Sunday, he hoped his congregation would forgive him for listening in on one, and expressing his thanks that the game was played in the afternoon and not in the morning.

Another letter read:

> Through your speech I have seen every play in the world's series and have kept pace with your enthusiasm throughout.

This was not from a young lad or a business man who couldn't get out to the game, but from a lady of sixty who had never gone to a ball game in her life. And one lady wrote me that her mother, eighty years old, never missed a play during the whole series. An old gentleman, blind for many years, and then past eighty-two, sent word that he had enjoyed the game immensely, and that the last game of the series was the best he had "ever seen." And I cannot tell how many letters we had from people who said that they had never had any interest in baseball before.

So we have people listening in on baseball and prize-fights and football who knew nothing of the joys of these sports

DO YOU ever feel the lack of knowledge you really ought to have at your command? Perhaps you missed going to high school. Then again, perhaps you did not get the most out of it when you were in school. It is true that many young people never realize the value of an education until they have been for a time out in the world, as the phrase goes, shifting for themselves. Then they regret either that they did not finish school or that they did not make the most of their opportunity while they had it.

Classroom atmosphere has also often been a handicap. Many cannot learn as well in the strict way of formal education, but often such people—and you may be one of them—can get an astonishing amount of good from books after they have left school far in the past. It is to meet the demand of people everywhere who want to improve themselves—who want, in short, to broaden and extend their education along general lines that this series of 50 educational volumes has been gathered together.

Simplicity of Style

AN important feature of these books is their simplicity of style. They have been specially written so that everything is fully and understandably explained—in fact, so that no instructor except yourself is necessary. You will have to study the books and contribute your endeavor if they are to do you any good. But if you are sincere in your desire for self-improvement, if you really want to learn, honest application and alertness will make these books a mine of mental wealth to you. Look over the list of books in this series at the right and see how they can benefit YOU!

These books are all self-teaching—that is the plan that underlies them all, to make no instructor necessary. But the books are of no value unless you read them with the determination to learn from them. There is no royal road to learning just by sitting idly and letting your eyes wander over the page! But if you have genuine ambition, then these are the books to help you get ahead—these are the books which may perhaps be of more benefit to you than you will ever realize unless you try them and see.

Astonishing Low Cost

IT is quite true that these 50 books, pocket-sized making them convenient to carry with you wherever you go to fill in spare moments, substantially bound in stiff card covers, cost only $2.98—full and final payment.

Remember that $2.98 is absolutely all you pay—with this first payment you get the books and they are paid for in full.

This extraordinary low price is possible because these books are produced in tremendous quantities. If they were bound in the usual expensive library form, however, they would cost something like $25 or $30. By issuing them in this attractive style, each book containing about 15,000 words of text, we are able to offer all 50 volumes for $2.98 prepaid, **payment in full.** There are no strings attached to this offer—$2.98 is positively all you pay.

Think of how expensive many educational books are. Here you can get 50 books for no more than one average textbook costs. And you become your own teacher, and you get the thrill and satisfaction of learning through your own efforts. This satisfaction is truly its own reward. Try it and see!

Try This QUIZ!

Do You Know—

1. Who said "Where ignorance is bliss, 'tis folly to be wise"?
2. What is meant by 'squaring the circle"?
3. What have the following names in common: Van Buren, Tyler, Polk, Fillmore, Pierce?
4. What are the four forms of English composition?
5. What is psychology?
6. Who were Donatello, Cellini, Bologna, Rodin?
7. What is the Milky Way?
8. Who was Delilah?
9. What famous speech begins: "Friends, Romans, countrymen, lend me your ears"?
10. What do the following mean: (a) "Sprechen Sie Deutsch"; (b) "Parlez-vous francais"; (c) "Hablan Usted espanol"?
11. How far does a falling body drop in the first second after starting from rest?
12. What does "ibid." mean?
13. Who was the Roman god of war?
14. What are the three orders of Greek architecture?
15. What chiefly caused the Civil war?

All of these questions, and scores of others, are understandably answered in this 50-volume, educational course totaling more than 750,000 words—and the price is only $2.98, payment in full.

Comprehensive Educational Course

JUST think of the scope of these 50 books—a total of 750,000 words. They include all sorts of subjects from history and economics and literature to mathematics and foreign languages and the arts. Even commercial subjects, such as geography and type-writing, are included. And then there are the handy reference volumes, the alphabetical dictionaries which give you concise information just when you need it and exactly as you want it. Everything you need is here—this series is really complete in itself, and you can carry the volumes about in your pocket because of their convenient size.

For those who so desire, indeed, other books on special lines can be secured later, in uniform format. Such things as farming, woodworking, story writing, etc., are available at similar low prices—full particulars of which are included with all orders for this 50-volume Educational Course.

Genuine Leather Cover

INCLUDED in each set of 50 books is a genuine sheepskin leather slip cover, holding one book at a time and protecting it while in use. A book may be slipped in or out in a few moments. Thus you can enjoy the luxurious "feel" of real leather while reading or studying these books.

50 Volumes

(15,000 Words Each)

English (Grammar)

1. Common Faults in English.
2. Spelling Manual. (Rules, lists, etc.)
3. Grammar Manual. (Parts of speech, verbs, etc.)

They Went Out to Find a NEW Way to Sell Motor Cars

—and sold 24 new cars and $27,000 worth of used cars in six weeks—in a small city

STILES & MULHOLLAND sell cars to the people who live *in*—and to the farmers who live *around*—Alma, Michigan.

They secured their franchise to sell a well-known make of car only a little more than a year ago.

At first they couldn't find a suitable building at reasonable rent. So they set up their business in a vacant lot—in a town of about 8000 population *in which they didn't know a soul.*

Today the whole town is talking about them and about the big success they have made. One of the town's leading financial men has built them a fine new building, with a plate glass enclosed showroom that would be the envy of many a big city car dealer. And people are now coming in to them from 15 to 20 miles away to buy new cars.

Good news sometimes travels fast. And it wasn't long before FARM & FIRESIDE was told that Stiles & Mulholland had discovered a new way to sell motor cars. So a representative was sent out to interview Henry Stiles and Hugh Mulholland—to find out the secret of their rapid rise as car dealers of the first rank. And it is this interview—now published in a special folder by FARM & FIRESIDE — which you can get free by mailing in the attached coupon.

Send the Coupon

If you are a dealer in a small city—no matter what you sell, you're going to be interested to know how these two young fellows started on the road to a big merchandising success—in a town in which they were unknown, and on a slender capital of only $1500.

One of them had been a farmer, then a cook in a lumber camp, dishing up grub three times a day to hungry lumberjacks. And then one day a car dealer up in Northern

HUGH MULHOLLAND HENRY STILES

Michigan asked him to try his hand at selling cars in his spare time. He agreed. And at the end of *that* month he finished with $295 extra, in addition to his $135-a-month salary as cook.

The other had spent much of his time in the factory and in the office. He knew mechanics. And he knew how to keep books and manage on the inside.

Then the two got together—*and success!*

Information You Want

Get FARM & FIRESIDE's interview with them. Read of the hard sledding they ran up against when the car-buying season slacked off last year. Then the brilliant coup that enabled them to sell 12 cars in one week when other car dealers were waiting for the buying season to roll around again. And how, in the six weeks after they moved into their new quarters, they sold 24 new cars and $27,000 worth of used cars.

Read what they have to say about the pitfalls the car salesman is apt to fall into. And how a dealer's service department should earn a profit instead of running along as "sales overhead."

Here's a real story—a story of merchandising success that every small-city dealer, no matter what he sells, can read with interest and profit. Send the coupon for your copy today—the folder is free.

Farm & Fireside's Service to Small-City Retailers

This is another interview in FARM & FIRESIDE's series—which makes available to retailers the tried and proven methods for building farm trade, as used by outstandingly successful merchants.

And this work is just a part of the service FARM & FIRESIDE renders in meeting the obligations of leadership in the farm field.

As every dealer knows, the advertisements in this magazine are a real force in influencing 1,200,000 farm families to buy. And a glance through any issue immediately shows why this is so—for here is a hundred-per cent-*personal* magazine—edited straight to the *individual*—and read with *warmer interest* than any other farm publication.

That's why dealers are finding it so profitable to feature and push products advertised in FARM & FIRESIDE—and why manufacturers' advertising in this magazine shows such steady growth.

before their radio set arrived, and others enjoying good music who never knew good music could be so good, and others following with the keenest interest public and political affairs who never gave them a thought before.

And oh! the letters from the shut-ins! They are our best friends. They listen to us longest, bear with us most patiently, defend us mightily, and applaud us most heartily. Perhaps we are closer to many of them than their own families. One of the finest compensations of the announcer and radio entertainer is the knowledge that all over this broad land poor stricken hearts, imprisoned by sickness or age or misfortune, listen eagerly for these voices from the air.

I have had thousands and thousands of letters from these radio fans, and I can truthfully say that if I had got nothing else out of radio these letters, straight from thousands of grateful human hearts, would repay me many-fold for every sore throat I have ever got. Perhaps I am especially sensitive to this phase of broadcasting because of an experience I once had before I had ever heard of a microphone. I think I may say it was my first piece of broadcasting, though it happened before the radio had come into use.

It was some years before my mother passed away. I had come to New York to study music and have my voice trained. And, like most young aspirants, I was struggling through this period under great difficulties. It had cost my mother many sacrifices; but we managed it somehow, and we had a little inexpensive apartment in a good neighborhood. I had a piano in the room, and every day practiced for long hours the difficult and fatiguing exercises required of the student. I was often aware how trying these performances must be to tired persons in some neighboring house who were not interested in my voice culture. But occasionally I would sing some songs, and I hoped these might not be so hard on the neighbors. One late afternoon I sat at the piano singing one after another of the old songs—just sweet little melodies, mostly those plaintive tunes which people loved so much in the long ago. My mother leaned back in her chair—an unfailingly appreciative audience—listening, with her eyes closed. It was growing late. The dusk of a warm summer evening came in and left the room in a kind of half glow. And then I stopped singing. In a moment the telephone rang.

"I AM speaking to you from across the court," said the voice of a lady, quite broken by sobs. "You have been singing, and my mother is dying—"

"Oh!" I broke in, "I am so sorry. I didn't know—"

"Oh! No! No!" came the voice. "You needn't say that. I called to ask you if you wouldn't sing again. She has been listening, and she likes those old songs. And she would like to hear more of them."

Of course I said I would go on singing. And I did. My mother was deeply moved by the circumstance. And then, as the gloom of our old room deepened, I went on singing every gentle, tender song I knew. After a long time, I thought I had better stop. A few minutes later the telephone rang and the same woman's voice, very much shaken by grief, told me her mother was dead. I wonder how many hearts,

Property of the Grosvenor-Dale Co., North Grosvenor-Dale, Conn. Home of the Agent

This fine home painted with the *new product*..

Outside Barreled Sunlight

A NEW paint with an old reputation! An *exterior* paint equal in quality to the famous Interior Barreled Sunlight from which it takes its name.

Here are some of the qualities which have already won enthusiastic acceptance for Outside Barreled Sunlight—

Brilliant, intense whiteness... Extreme opacity, or "hiding" power... Beautifully smooth, rich finish... Freedom of flow and spread.

Because of its remarkable ease of flow and spreading capacity, Outside Barreled Sunlight covers an unusually large area per gallon. For the same reasons, the labor cost is reduced. And the extreme opacity reduces the amount of paint required on a given job.

With the *two* Barreled Sunlights now available, every job of fine interior or exterior painting can be done—either in the pure white or in tints. (By simply adding oil colors to these all-oil products, anyone can quickly obtain whatever tint may be desired.)

Interior Barreled Sunlight for a handsome, washable enamel finish on walls and woodwork. Outside Barreled Sunlight for an intensely white, beautifully smooth exterior job.

Sold in cans of all sizes; in 5-gallon buckets; and in large drums. See coupon.

U. S. Gutta Percha Paint Co.; 33-B Dudley Street, Providence, R. I. Branches or distributors in all principal cities. More than 7000 retail dealers.

"A Third of a Century Ago"

Early in the Gay Nineties—in 1894—when women rode tandem bicycles and wore mutton leg sleeves, before autos, airplanes and radios, 3-in-One made its advent as a bicycle oil.

Today it is the most widely sold of all packaged oils. Its uses have extended to the oiling of all light mechanisms; preventing rust on all metals; cleaning and polishing furniture, floors, windows.

3-in-One

Prevents Rust - OILS - *Cleans & Polishes*

Most of these uses were discovered by users. They told us. We told others. The unvarying high quality of 3-in-One did the rest—a quality based on compounding, scientifically, a number of primary oils of invaluable and exceptional virtues.

3-in-One is sold by all dealers in Handy Oil Cans and three sizes of bottles. Ask for it by name.

tired out by life, have slipped quietly and peacefully away, soothed by the soft strains of some radio singer who little knew what a farewell song he was sending out over the air.

I must not leave this subject of letters from the radio audience without telling of one type of letter which comes in great abundance before every important national broadcast event. They are the appeals of those who are in search of missing persons, and want us to help find them. I have never handled a big baseball game, prize-fight, football game or important public event of any sort without being bombarded just before the event with letters and telegrams asking me to send out over the air a plea to some missing son or father or husband or daughter to come home and be forgiven.

"Please, Mr. McNamee," such a letter will read, "take a moment today during the game to call upon my son, who has been missing for nearly a year, to come back to his mother. He was always a great baseball fan, and if he is alive today I know he is listening in to this game. And if you will put a mother's appeal on the air I know it will reach his heart and bring him back."

Unfortunately, it is not a case of just one mother's appeal. There are so many of them. It is always a very moving request, and I wish it were possible to grant it. But it must be remembered that when I am broadcasting the time on the air does not belong to me. It is costing someone a very great deal of money. And there are so many such appeals that, while one or two might take but little time, all of them would leave little room for anything else. And so the National Broadcasting Company, as well as most others, have a rule forbidding the announcer to comply with these requests.

How many such appeals would have to be broadcast if we made a practice of doing it will be apparent from the fact that last year the New York Bureau of Missing Persons alone had 21,800 missing person cases reported to it. That means an average of sixty a day.

Moreover, the radio, so potent in other respects, has been singularly ineffective in bringing missing persons back home. The New York Police Bureau sends out at frequent intervals from station WNYC names and full descriptions of missing persons. And yet the captain in charge of that work tells me that since the bureau has been doing this it has resulted in not a single prodigal returning.

"People don't listen to our story," moans the captain, "they want to hear something interesting or entertaining over the radio. And so, as soon as we come on the air with our list of missing persons, a swift turn of the dial sweeps us out of the room, and some jazz band or opera singer into it."

BUT the radio, if ineffective to bring the prodigals home, has been quite successful in bringing together long separated friends and sweethearts, but wholly without design. One of the most interesting cases that ever crossed my notice was this one:

Many, many years ago, two young people were very much in love with each other. But for some reason, one of those inexplicable misunderstandings which roughen the course of true love came between them. They drifted apart. Years later the young lady married. But the young man clung to his bachelorhood, and jogged along through life alone. After a good many more years the lady became a widow. Meantime, she had become quite an authority on cooking. When radio came along she was engaged by some concern to broadcast a talk on cooking and give a weekly collection of recipes. She made her talks at one of the stations along the Atlantic coast. She was now a woman of sixty.

ONE day an old gentleman in his bachelor quarters in the Middle West, turning the dials of his radio set in search of something interesting, came quite accidentally upon this station. Wholly uninterested in cooking recipes he, nevertheless, paused a moment. Perhaps something in the voice caught him. Perhaps it was just Fate playing one of her tricks. At all events, he continued to listen. Then he felt there was something familiar about that voice. After all those years, there was something in its tones that stirred old memories and carried him back to that first romance of his youth. When the speaker had finished, the announcer, as usual, gave her name. And then the man knew that, after more than thirty years, the voice of his old sweetheart had mysteriously floated back to him through the air. He wrote her, learned she was a widow, called upon her, resumed the old courtship, married her, and put some of these cooking recipes of hers to the test.

We had another such case. A young lady singer broadcast a concert for us. Then she left on a brief tour. When she returned she was in amazingly buoyant spirits. Something had happened. It was the old story. On tour she had met a young man. It was love at first sight, or near it. They were engaged and a violently ardent correspondence was in progress.

We saw no more of her for some months. When she appeared again her bubbling spirits had gone. She was depressed and saddened, and of course we could easily guess the cause. What had happened was this: Some of her letters had gone astray. The young man, being a sensitive soul, thought she had dropped him or at least slighted him. He chose to be one of love's martyrs, and wrote no more. The romance was ended or, at least in a state of suspended animation. One night he was sitting in his room in Chicago before the radio set. He fiddled around with the dials, exploring the air for music, when suddenly a well-known and well-loved sound burst into his room. It was the voice of his sweetheart singing a little love song in our studio in New York. Was she flinging it out into the air in search of her proud lover's heart? If she was it found its mark.

That voice and that song were too much for him. When the song was ended, as Irving Berlin would say, the melody lingered on, long enough, at least, to make him smother his pride and write the singer. The next time she came to the studio she was again in a state of joyous animation. The young man was in New York and the romance was rushing forward to its logical conclusion—thanks to the radio.

But of course it is not only those in search of lost relatives and lovers who come to us. A good many people find

Choosin'-up sides

SLOWLY at first, then rapidly and with more cunning, black-knuckled hands mount the bat. A shrill triumphant cry of "Full hand or nothin'" comes a fraction of a second before the opposition yell of "Chicken claws." Thus is decision made.

To similar chance is left the settlement of far too many human affairs, affairs that vitally affect the health, comfort, and purse of the family, affairs which once decided cannot readily be changed.

With the advent of *Capitol Guaranteed Heating*, all reason for such unreasoning selection of boilers and radiators was abolished. For the first time in heating history, a company of eminent place in the industry guaranteed* in writing the exact number of radiators that every one of its boilers would satisfactorily heat; guaranteed to make good if the boiler did not. At one stroke were wiped out all the old uncertainties and guesswork about boiler sizes.

The immediate success of the idea may be judged from the buying approval of the public who, in greater numbers than at any other time in the thirty-eight years of the company's existence, selected Capitol boilers and Capitol radiators. Note well the significance of that word, "selected." They and their architects and heating engineers did not trust to surmise or conjecture. They chose, not by chance or guess, but scientifically.

A good contractor near you will gladly explain the money and fuel savings, as well as the certainties, of *Capitol Guaranteed Heating*. Write for his name and our interesting, illustrated book, "A Modern House Warming."

*Guaranteed Heating. *Your contractor receives a written guarantee on the heating capacity of every Capitol boiler. No other heating equipment assures you satisfaction so definitely.*

varied uses for the radio. One night, before I left my home, the telephone rang. When I answered I heard the voice of a lady, very much troubled:

"Please, Mr. McNamee," she begged, "when you are broadcasting tonight will you not kindly ask if some listener knows a remedy for the hiccoughs. My husband has been hiccoughing for several days without let-up, and we can give him no relief. Surely someone will know some way of stopping this."

Of course I could not do that. If I could broadcast for a hiccough cure I could broadcast for all sorts of cures, and then when would there be time for anything else over the radio. We are always hearing from people who have discovered wonderful remedies. Some of them are just kindly souls who would like to give the benefit of their discoveries to their fellows. More of them are practical persons who are looking for free publicity.

Before a baseball or football game or prize fight I am sure to get letters and telegrams and packages sending me marvelous razors and healing soaps and miraculous shaving creams and soothing cigarettes and trick fountain pens, and suggesting that I acknowledge receipt "over the air." And I always get lozenges and tablets and syrups and powders for worn and sore throats. How these manufacturers of patent medicines worry about my throat! All they ask is that I will just use the wonderful remedy they send me, and then "say over the air how it helped me."

The Police Captain of the Missing Persons Bureau says the folks tune out on him when he starts reading his lists of runaway husbands and sons. What would they do to me if I started advertising cough mixtures by talking about my throat at a baseball game. One time, at a football game, someone handed me a hot-dog. I thanked the donor, ate the hot dog, and then said how good it was. After the game I got a letter. "Who cares," wrote my elegant correspondent, "whether you like hot dogs or not, you big bum. Tell us about the game." This does not come under the head of polite letter writing, but it had in it the germ of good advice.

EDITOR'S NOTE: This is the second article in the "Behind the Mike" series prepared by Mr. McNamee for THE AMERICAN MAGAZINE. There will be others in subsequent issues. Mr. McNamee is the most famous of radio broadcasters, and in his articles he will tell you his personal adventures while broadcasting, and give you an intimate look behind the scenes in the broadcasting studio.

ADVICE IS ALL RIGHT, if You Don't Take Too Much of It," says Ross Santee, cowboy artist and writer, who came East some years ago, "and was durned near ruined" by trying to do what people told him he should do. Then back West he went, out to Arizona, where he wrangled horses, brooded, finally got himself in hand, and came East again. But he was healed this time against the efforts of others to change him; he stuck to what he wanted to do, did it his own way, and "arrived."

Riding the Rivers Down to the Sea

(*Continued from page 51*)

and a quick run through the broad river of the open valleys brought them to the Needles. There the party disbanded, having spent eighty days on the Colorado, and having completed the survey of the last of the great rivers of the United States to be precisely mapped. The "Grand" was shipped to Washington and is now a permanent exhibit in the National Museum, as a memento of this historic expedition.

But it was the Yellowstone that initiated Freeman into river roving. "I was spending a winter vacation in the Yellowstone Park region," he said. "The Park was under from ten to forty feet of snow, and visitors were not expected. But I managed to borrow a pair of skis from the army officer in command at the Fort, and spent a glorious three weeks mushing through the valleys and climbing the mountains. Perhaps the most valuable experience that I got out of this trek was the companionship of two old seasoned river-hands, a Yellowstone Scout and a Sergeant of the Game Patrol. They were full of boating lore, and put me wise to many points. One day we climbed to the crest of the Continental Divide. We were out of breath and thirsty, and on the summit the Sergeant let down a tin can on a string and brought up water from an air hole.

"The Sergeant had a dramatic way about him, and said oracularly: 'Now, we're right on the ridgepole of North America. If I dip to the left,' and he dipped in that direction, 'it's the little old Pacific Ocean I'm robbing of a pint of Rocky Mountain dew. While, if I dip over here to the right, it's the Atlantic that'll have to settle back a notch.' He straightened up, nodded toward the southeast, and went on, 'And if I had a long-enough reach to cast my can over there beyond Jackson's Hole, I could dip in the font of the Green River and keep it from feeding the Colorado and the Gulf of California by so much.'

"This suggested an idea that had occurred to me before. Wouldn't it be possible, I asked, to launch a boat up here on the Great Divide and ride the river down to the sea?"

"'Sure,' answered the Scout, 'you could go either way you're a mind to, depending on whether your destination is Europe or Asia. Launch into the Yellowstone yonder, and it would ride you to the Missouri, the Missouri would carry you to the Mississippi, and the Father of Waters would swing you down to the Gulf of Mexico. After that, it ought to be easy to ride the Gulf Stream across to Europe.

"'Or, if your hankering is in the other direction,' he went on, 'just start your boat over here on the Salmon, she'll bear you to the Snake, the Snake'll deliver you to the Columbia, and the old war-horse of a

LEARN HOW TO WRITE SHORT STORIES

RECENTLY an American writer was paid $1800 for a single short story. By learning to tell the stories of her dreams this woman has found her way to fame and fortune. You can learn to write, too. A new practical course of instruction will give you the training right in your own home during your spare time. Endorsed by eminent writers, including the late *Jack London*.

Write Today for new booklet, "The Art of Story Writing." No obligation—booklet is free. Special offer is now being made. Also special course in English. Write Today—NOW! **HOOSIER INSTITUTE, Short Story Dept., Dept. 1065, FT. Wayne, Indiana.**

Learn Cartooning
At Home—In Your Spare Time

The famous Picture Chart Method of teaching **original** drawing has opened the door of success for hundreds of beginners. Whether you think you have talent or not, send for sample chart to test your ability, and examples of the work of students earning from $50 to $300 per week. *Please state your age.*

THE LANDON SCHOOL
1446 National Bldg., Cleveland, O.

Test Your Art Ability FREE

If you like to draw, test your natural sense of design, proportion, color, perspective, etc., with our Art Ability Questionnaire. Learn if your talent is worth developing, and how much training you will need. You will be frankly told what your score is. Many Federal Students are making $2,000, $4,000, $5,000 and $6,000 yearly. The Federal Course is recognized everywhere by art employers and buyers of commercial art. Learn at home in spare time, without previous training. **Personal, individual criticisms on your work.** Get this free test—send now for your Questionnaire. Please state age and occupation.

Federal School of Commercial Designing
1426 Federal Schools Bldg., Minneapolis, Minn.

New Invention Banishes CAN OPENERS!

No more stabbing and hacking with obsolete can openers! Amazing simple new machine opens any can at the turn of a crank. Holds can for you, lifts out lid slick, smooth, and clean in 3 seconds, ***automatically!*** A revolutionary, lifetime device. Beautifully nickeled and handsome as a piece of fine cutlery. Simple in construction. Guaranteed for 5 years. Approved by Good Housekeeping Inst., Modern Priscilla, etc. Write today for Special Introductory Advertising Offer.

AGENTS:—
Men and Women make $6 to $12 an hour, full or spare time. Big commissions on every sale. Exclusive territories. Write quick for FREE OUTFIT and FREE TEST Offer.

Columbia'll gallop you along the Oregon line and down to the sea in no time.'"

That was the germinating idea—to track rivers to their sources and then ride them down to salt water. Ever since that sunlit day on the snowy crest of the Great Divide, in the year 1901, this has been the guiding principle with Freeman. By river routes he has criss-crossed two continents, and traveled from mountains to the Pacific, Atlantic and Arctic Oceans.

"The old Sergeant urged that I tackle the Columbia," continued the explorer. "He had trapped and hunted on its creeks and canyons, and that evening, when we were snug in a mountain cabin, his old Columbia memories thawed out, and far into the night he yarned of the 'mighty river.'

"But the Columbia seemed, from his description, a bit *too* mighty for a starter. I wanted a river I could 'learn on' with a fair assurance of survival. At the same time, I wanted a rugged river, swift water, and the other varieties of excitement. I found them all on the Yellowstone. Before I got through with it I had been shipwrecked and my boat had been battered and rolled to loose planks. I had been flooded by high water, pelted by hail, and brushed by a cyclone.

"Perhaps most people think of the Yellowstone as a picturesque little mountain stream. It rises in Yellowstone Park, pours out of a beautiful blue lake, roars down a canyon with a drop of three thousand feet in thirty miles, and thereafter descends another three thousand feet in the five hundred miles that it travels to take possession of the meek Missouri. And it is navigable by a small boat all the way from the northern limits of the Park to its mouth. There are a few rivers in the world with a steep descent, but none of these can be boated without frequent linings and portages.

"A FEW weeks after my talk with the Scout and the Sergeant, I embarked upon the Yellowstone. The boat was a ponderous scow, twenty-five feet long by eight feet wide. A homesick miner had built it of bridge timber and railroad ties, intending to ride it down-stream to his home in Hickman, Kentucky. On its stern he painted the name 'Kentucky Mule,' but after a scant trial abandoned her and bought a railroad ticket as safer and surer. The 'Mule' seemed strong enough to bump her way through any obstructions. She was mine for the taking—so in this curious vessel I started alone one May morning, en route to the Gulf of Mexico.

"The voyage was exciting, while it lasted. Within the first hour I was pitched into the water, while my clumsy bark, caught on a rocky reef, teetered desperately almost on her beam end. Finally, she broke loose, righted, wallowed downstream to where I was treading water, and I clambered aboard. The 'Mule' hit the next chute head-on and galloped down it with considerable smartness. Through the third, she reeled beam-on without capsizing. After that, I gave up trying to wield the useless steering oar, and sat down to enjoy the scenery.

"The current was carrying us all of fifteen miles an hour as we swept into a sharp bend marked by a projecting cliff. In another instant we had banged into that solid piece of scenery. The 'Mule'

Digitized by Google Original from UNIVERSITY OF IOWA

simply cracked and splintered under the blow, telescoped, and backed drunkenly off from the cliff. The current gripped her, and off we sped down-stream. At almost every riffle the hashed mass of loosened timbers and spikes rolled, and lost timbers at every roll. But I had counted on getting at least to the next town—Livingston, Montana—by night, and so I hung on until dusk, when the growing darkness and the cold made even that slight hope fail. Besides, by this time my command had reduced to only three planks and could hardly be called even a raft.

"That was my first bout with a boisterous river. Nobody but a greenhorn would have trusted himself alone in the canyon with that unwieldy elephant of a boat. Pushing the remnants of the 'Mule' into the current—and hoping that perhaps a plank might float to Kentucky—I climbed through the darkness to the light of a neighboring ranch, spent the night there, and in the morning walked the twenty miles to Livingston."

A BOAT-BUILDER in Livingston was engaged to make a new and more suitable vessel. But before the boat was launched the young explorer had attached himself to the local baseball team, and the voyage was postponed. The interruption lengthened into months; then an opportunity came to Freeman to go abroad and it lengthened into years. He was destined to travel many of the famous streams of the Old World, to endure such exotic adventures as an East Indian typhoon, Chinese smallpox, jungle fever, and to go through the World War as a correspondent on many fronts, before he finally got back to Livingston. But he did it, and finished his voyage down the Yellowstone, Missouri, and Mississippi to the Gulf.

"The most serious hazard on the Mississippi is the caving of banks," said Mr. Freeman. "In a violent squall on the lower river in 1921 I saw a houseboat disappear under the splash of a hundred-foot cave-in. A launch which was towing the houseboat picked up two men, but was itself near foundering and unable to start its motor, when I reached it. Only a corner of the houseboat protruded from the swirling mud. I towed the launch to the first stretch of sandy beach, and when we returned to the wreck in the morning it had disappeared completely. Several additional cave-ins had occurred during the night, and the bank was altered beyond all recognition.

"Before I landed in New Orleans I had seen five other houseboats sunk by storms. Every year scores of these clumsy underpowered crafts—which are the homes of a numerous clan of fishermen and river gypsies—are lost, frequently with all hands. Yet, so voracious is the river, that I can recall seeing only a dozen wrecks above water. Even a big steamer wreck remains in sight only a few weeks. Gradually it settles as the under sands are cut away by the current, and then it is covered over by deposits of silt, as the muddy water, meeting an obstruction, drops its sediment. There are scores of tree-covered islands in the Mississippi which mark the graves of wrecks—many bear the names of the vessels which they entomb."

In nearly thirty years of voyaging Freeman has boated fifty rivers, large and small, and has looked upon as many more.

"Give me the facts"

Digging out investment facts for yourself is a worrisome, time-taking job even though you have knowledge of dependable sources. When you buy a bond recommended by The National City Company you may be sure that all the essential facts which justify the Company's own confidence in that investment are readily available to you. Through National City offices in over fifty American cities you can get up-to-date facts on your present holdings or on a variety of desirable new bond offerings.

BOYS!

Here's an opportunity for you to earn your own spending money each week, and also get dandy prizes. Represent Woman's Home Companion, The American Magazine and Collier's, The National Weekly, in your town. Let me tell you how.

Jim Thayer, Dept. A-7, The Crowell Pub. Co., Springfield, Ohio.
Name.....
Address.....
Town..... State.....

I asked him which, of all the streams he knows, is the one most worth seeing.

"The Columbia," he answered. "Taking it all the way, from its source in the Canadian icefields down through Oregon to the Pacific Ocean, it is the greatest river sight in the world.

"It is only twelve hundred miles long, but it is swift and magnificent all the way, and is an important part of the famous scenic attraction of Oregon, the Columbia River Highway. After leaving the confines of British Columbia it flows almost due north, then south, through one of the most fertile sections of the state of Washington. There are no ugly wastes, no desert patches, no miasmatic swamps. When you reach the mouth as it empties into the Pacific Ocean on the border line between Oregon and Washington, you do not find the flat, monotonous delta that seems characteristic of most big rivers—it meets the ocean strength for strength, and finishes in a superb mountain setting worthy of the high Rockies in British Columbia in which it takes its rise.

"The Grand Canyon of the Colorado is in a class by itself—and one thinks of it as gorges and chasms and painted cliffs rather than as a river. The Amazon is the world's largest river—it carries many times the volume of water normally carried by the Mississippi. But the Amazon is monotonous—thousands of miles of unrelieved jungle on either side. The longest river is the Mississippi—from the farthest head waters of the Missouri its course is more than 4,200 miles. This compares with 3,800 for the Amazon, 3,766 for the Nile, and 3,400 for the Yangtse. The longest river in Europe is the Volga, 2,400 miles.

"It was the old Sergeant up there on the Great Divide who first fired my imagination with the Columbia. His stories were so vivid that his very phrases struck in my memory, to bob up later at the most unexpected times. I remember a day when I was floundering in the Euphrates in a pitch-smeared gufa, and the thought began to ring in my brain: 'But you haven't seen the Columbia yet!' Again and again pictures conjured up by the old Sergeant flashed before me: 'The big eddy at the bend of Surprise Rapids, where you go to look for busted boats and dead bodies' . . . 'The twenty-one miles of white water rolling all the way from Kinbasket Lake to Canoe River'. . . 'The double googly intake at the head of Gordon Rapid' . . . 'The black-mouthed whirlpool waiting like a wildcat at the foot of Death Rapids.'

"What was the sense of nosing all over the world in search of mighty rivers, when this great, romping, rip-roaring stream was waiting back home?"

IN 1920 the chance came to see the Columbia, and Freeman saw it from beginning to end. "I climbed the glacial fields of British Columbia, to the crest of the divide there, and found the trickle of clear water which is the source. With one sweep of my cupped hand I scooped the Columbia River dry.

"I thought of that stunt a few weeks later when I stood at the Little Dalles, in northern Washington, and watched the Columbia whoofing through a channel one hundred and forty feet wide between lofty cliffs which go down deeper into the water than they rise above it. Here, as in two other places, the Columbia has to 'turn on

Digitized by Google
Original from UNIVERSITY OF IOWA

its side to wriggle through,' as the river men say. We watched logs, railroad ties, fence posts, shingle bolts—all the refuse of sawmills, farms, and towns—disappear in those gulping rapids, to reappear a mile down-stream smashed and pulped, or with all their corners rounded smooth. That was one of the many places where we had to portage or line."

For its first one hundred and fifty miles, the Columbia River flows in a northerly direction between two parallel mountain ranges. Then it breaks through the chain on the left, makes a hairpin bend, and flows southward. This is the Big Bend, and here is some of the most striking scenery—also some of the most ferocious water. The voyage around the Big Bend was made in a thirty-foot boat piloted by its owner. Another veteran river-hand was oarsman; Freeman plied the second oar; the fourth member of the party was a photographer from Los Angeles.

"Everywhere we were warned against attempting the trip, and were told of others who had come to grief. There was the recent story of a bootlegger taking a boat-load of liquor down the river, who capsized in Surprise Rapids. He was sucked into the big whirlpool, and it was days before his body came up, many miles below. There is Priest Rapids, with a current of twenty miles an hour, where two French-Canadian priests drowned; and Gordon Rapid and Boyd Rapid, each named, like so many spots on the Columbia, for its first known victim. At Little Dalles a big batteau with six Swede lumbermen was sucked out of sight, never to be seen again. Another story told of a Hudson Bay batteau capsized in Whirlpool Rapids, and of its crew—eight men perished on the rocks.

"BUT of all stretches of the river none can equal the grisly record of Death Rapids, the terrible Dalles des Morts. We found many graves of victims, and even more numerous are the inscriptions on the cliffs in memory of those whose bodies were never recovered. In 1817, six trappers, already sick and wasted by many weeks of struggle with the river, were lining their canoes over these rapids when the line snapped and the boat disappeared in a whirlpool. It carried all their provisions. Unable to find game, the men were soon destitute. One by one they died, until a single survivor was left. He was in an emaciated condition when rescued by two Indians. This gruesome tragedy gave its name to the Dalles des Morts, and for more than one hundred years the rapids have lived up to their sinister title.

"We lined our boat through Death Rapids without accident. In fact, with less trouble than we had at Surprise Rapids farther up the river. I think the reason why Death Rapids has taken such a toll of lives is that it does not look as bad as it is. Many a novice or daredevil, who does not think of attempting to boat through Surprise Rapids, sizes up Death Rapids as 'not so bad,' and figures that he can run it—and one more name is added to the roll of victims."

After making the circuit around the Big Bend, Freeman changed to a sixteen-foot skiff, and completed his voyage in it. Part of the way he had company, but the last two hundred miles along the Oregon-Washington state line he boated alone.

Keeps Your Hair Neat, Rich-looking and Orderly

IF your hair lacks natural gloss and lustre, or is difficult to keep in place, it is very easy to give it that rich, glossy, refined and orderly appearance, so essential to well-groomed men.

Just rub a little Glostora through your hair once or twice a week,—or after shampooing, and your hair will then stay, each day, just as you comb it.

Glostora softens the hair and makes it pliable. Then, even stubborn hair will stay in place of its own accord.

It gives your hair that natural, rich well-groomed effect, instead of leaving it stiff and artificial looking as waxy pastes and creams do. Glostora also keeps the scalp soft, and the hair healthy by restoring the natural oils from which the hair derives its health, life, gloss and lustre.

Try it! See how easy it is to keep your hair combed any style you like, whether brushed lightly or combed down flat.

If you want your hair to lie down particularly smooth and tight, after applying Glostora, simply moisten your hair with water before brushing it.

A large bottle of Glostora costs but a trifle at any drug store.

A generous sample FREE upon request.

Self-Expression

THE PATH TO ATTAINMENT

"I have never received the impetus towards self-expansion from the many college courses I have enjoyed that came to me through the study of the Palmer Course in English and Self-Expression."—Mrs. E. T. S., Springfield, Mo.

JUST *one* viewpoint of Palmer Training in English and Self-Expression from a highly cultured college-bred woman. Self-Expression is more than writing, speaking, working, playing. It is dependent upon the development of the entire organism—physical, mental, spiritual.

To take this course does not mean that you struggle through a self-correcting system alone. You are guided personally, sympathetically by instructors specially trained in English, Psychology, and Philosophy.

The author of the course, Paul D. Hugon, is internationally known as an educator, editor, psychologist. Write for the fascinating free booklet—"Understand and be Understood."

Palmer Institute of Authorship
Dept. 422-E, Palmer Bldg., Hollywood, Cal.

Please send me, without obligation, details about your course in English and Self-Expression.

ALL CORRESPONDENCE STRICTLY CONFIDENTIAL
NO SALESMAN WILL CALL ON YOU

"Here railroads parallel the river on both sides, and almost every hour I was in sight of a train. In a day or two the trainmen knew the bright green skiff, and generally gave me a wave in passing.

"ONE day I was shooting down Indian Rapids when a train breezed along on the south bank and the engineer waved to me, I waved back, and saw other members of the crew waving too. It was a freight train, and the engineer slowed down, apparently to see how a rapid was run.

"The current was racing down its steep chute close to twenty miles an hour and I was pulling an additional two or three miles. My craft was steadily gaining on the train when a sudden 'toot' of the whistle caused me to pause and look up. I saw the engineer wildly gesticulating, and pointing down-stream.

"Then I saw it too—a great black cone of water whirling like the Devil's own merry-go-round. It was right ahead of us—too late now to recover the way I had lost by my momentary pause—and in an instant the rim of the whirlpool touched. The boat spun. Her stern slipped down the bevel of the funnel, the bow was lifted out of the water and pointed up at an angle of about thirty degrees. At the same time I frantically dug over the side with my oars, but could get my grip into nothing more substantial than air.

"The whirlpool was perhaps fifteen feet across and about three feet deep in its center. It was spinning us around from right to left, and it was clear that we might keep that up all afternoon—or until the suck drew us down into the center—unless something were done. From my position in the up-reared boat I couldn't seem to reach into the water to paddle. If I moved to the stern I was afraid I would weight it lower into the grasp of the 'sucker,' but by moving forward my weight might have the opposite effect.

"And so it turned out. I wriggled forward in a sitting position, the prow came down and the stern lifted a bit. A quick stroke with my left oar against the whirl shot us clear of the twister. A hundred yards of hard pulling through mean swirls brought us into smooth water—and in the meantime my gallery of trainmen who were curious to see how a rapid is run had already disappeared around the bend."

THE Columbia, the Missouri, the Mississippi, the Ohio, the St. Lawrence, the Saskatchewan, the McKenzie—these were roads for the early explorers, the pathfinders, the pioneers. Indeed, in many regions, they were the only roads, and it was the exploration of rivers that led to opening up the lands bordering on them.

"One of the chief lures of river voyaging, in my opinion," concluded Mr. Freeman, "is the opportunity it gives to follow the routes of the historic explorations. I always make it a point to study the history of a river before embarking upon it—both for the practical knowledge of currents and formations, and for the zest of tracking the old voyagers."

This interest in the historical has been strong throughout Freeman's entire career which has hardly been the complete vagabondage that I have pictured. For, between trips, he has taken time to record his own adventures and has published eight books of travel (most of them devoted to river expeditions), one novel, a history, and four books of impressions of the World War. He was attached to the British Navy during the last year of the war, and was a member of the Allied Armistice Commission.

How Much Do You Know About the House You Live In?

(*Continued from page 59*)

Answers to Home Building Quiz No. 1—General

1. Brick (6000 B. C. in Babylon).
2. Wood.
3. The side post or side of a doorway or window.
4. Thomas Jefferson (1743-1826); designed Monticello (1765), Virginia State House (1785).
5. Paint, oil, varnish, and enamel.
6. (1) Living-room, (2) dining-room, (3) kitchen, and (4) bedroom.
7. Herbert Hoover, Secretary, Department of Commerce.
8. One to whom the builder has sub-let part of the construction work.
9. (a) Has upper and lower sash, (b) forms a gable rising from roof, (c) operates on hinges, (d) reaches to the floor.
10. (1) Roofing, (2) flooring, (3) walks, (4) terraces.
11. Semicircular window.
12. Robert E. Lee (1807-1870), commanding general of the American Confederate army.
13. A mortgage lien on the house for unpaid labor wages due.
14. (1) Tile roof, (2) wrought-iron details, (3) balconies, (4) patio, (5) brightly colored stucco exterior walls.
15. Cement.
16. With a file.
17. Aboriginal American cliff dwellings of Arizona and New Mexico.
18. To saw a true and even miter joint.
19. Thickness of covering of paint, plaster, or other material applied at one time.
20. Bureau of Standards.
21. Dormer windows.
22. Square or oblong.
23. List of materials, sizes, and quantities necessary for any given construction job.
24. Wisconsin.
25. Made personal and home property protection possible outside of walled cities.
26. Fireplace.
27. Alloy of copper and tin.
28. Refined gypsum plaster, originally brought from a suburb of Paris.
29. Israel Putnam (1718-1790), in 1775.
30. A bungalow is only one story high, while a house is more than one story.
31. Two-story porch ceilings supported by columns, large windows and doorways, exterior shutters, broad eaves, combination of gable and hip roofs.
32. The Architects' Small House Service Bureau of the United States.
33. Homes owned by Presidents of the United States, respectively: Thomas Jefferson, Andrew Jackson, James Monroe, George Washington, James Madison.
34. Architect designer of the Pennsylvania State House, on Chestnut Street, Philadelphia (1729), commonly called Inde-

Travel the D&C Lake Lines

Great Lakes First!

D. & C. Steamers Guided by Radio Compass Signals

To Lovers of Sea, Sky and Drifting Clouds:

Summer is just around the corner, and it is in order to suggest a cruise on the Great Lakes as part of your vacation.

We would be pleased to help you plan an outing of two, four, six or eight days' duration on the Lower Lakes, and supply you with pictures and descriptions of pleasant places: Niagara Falls, Mackinac Island, and others.

If you contemplate an automobile tour, plan to make part of the journey by boat. Our overnight service between Buffalo and Detroit; Cleveland and Detroit, is used extensively by automobilists. If you desire a longer voyage our line between Cleveland and Chicago, via Detroit, Mackinac Island and St. Ignace, will appeal to you. Dancing, concerts, radio entertainments, deck games on shipboard—not a dull moment.

A. A. SCHANTZ, *President.*

D&C Lake Lines

Fares: Buffalo to Detroit, $5; Cleveland to Detroit, $3; meals and berth extra. For the Chicago-Mackinac Island tours fares given are for the round trip, and include every expense on steamers: Buffalo to Mackinac Island, $49; to Chicago, $79. Cleveland to Mackinac Island, $41.50; to Chicago, $71.50. Detroit to Mackinac Island, $30; to Chicago, $60. Stopovers at Mackinac Island and other ports. For reservations, address E. H. McCracken, G. P. A., Detroit and Cleveland Navigation Co., Detroit, Mich.

Fast freight service on all divisions at low rates.

pendence Hall, where the Declaration of Independence was signed, July 4th, 1776, (1676-1741).

35. Brick and window glass.

Answers to Home Building Quiz No. 2—Structural

1. Steel angle used with brick or masonry walls to carry and reinforce the wall over a window or door opening.
2. (a) Face brick is artificially treated for surface texture and color, (b) while common brick is ordinary burned clay brick used for facing and backing.
3. (a) Wood siding, (b) shingle siding, (c) common brick, (d) face brick, (e) hollow building tile, (f) concrete block, (g) portland cement stucco, (h) magnesite stucco.
4. Lumber unit of measure: 1 sq. ft., 1 in. thick, the quantity unit being M=1,000 board feet.
5. (a) Double-hung, (b) casement, (c) dormer, (d) French.
6. Boards set up at corner of cellar excavation to mark exterior dimensions of walls.
7. Unit of measure for roofing material, 100 square feet of coverage.
8. (a) Wood pulp, (b) gypsum plaster, (c) asbestos cement, (d) sugar cane fiber, (e) paper pulp.
9. Length 8 in., thickness 2¼ in., width 3¾ in., for common and rough face brick, as approved June 21, 1923 (Simplified Practice Recommendation No. 7, U. S. Bureau of Standards).
10. Rustproof.
11. (a) 13/16 in. for new floors, (b) ⅜ in. for laying over old floors.
12. True Colonial siding consisted of narrow clapboards overlapping horizontally, although in present-day usage wide clapboards are often termed "wide Colonial siding."
13. (a) Kitchen dresser, (b) bookcase, (c) china closet, (d) window seat, (e) buffet, (f) breakfast nook, (g) ironing board, (h) cupboard, (i) bed.
14. (a) Studs are vertical structural members of walls and partitions. (b) Joists are horizontal structural members supporting floors.
15. (a) Concrete block, (b) poured concrete, (c) clay brick, (d) rubble stone, (e) hollow tile, (f) cement brick.
16. 3′ x 7′.
17. Fitting a window or door frame with glass.
18. (a) White oak and (b) Southern long leaf or Georgia yellow pine.
19. Material used on the exterior stud framing to enclose or "sheath" the house prior to "overcoating."
20. (a) Pebble or rock dash, (b) sand-floated, (c) floated rough cast, (d) colored aggregates, (e) sponge, (f) stipple, (g) roughtroweled.
21. Wood mosaic floor finish made of wood strips and blocks glued together at edges to form pattern or design.
22. Structural parts of stair construction.
23. (a) Use waterproofing compound in concrete mix, or (b) apply penetrative, void-filling semi-liquid to walls, preferably the exterior, after erection.
24. (a) Scratch coat, (b) brown coat, and (c) white or finish coat.
25. (a) White pine, (b) red cedar, (c) fir, (d) cypress, (e) redwood, (f) spruce.
26. (a) Southern pine, (b) oak, (c) white pine, (d) chestnut, (e) cypress, (f) birch, (g) basswood, (h) gumwood.
27. Metal lath.
28. A vertical window projecting from a slant roof.
29. Manner of joining boards by interlocking wedge-shaped tenons and spaces.
30. 2″ x 10″.

Answers to Home Building Quiz No. 3—Roof

1. (a) Drainage purposes; and (b) beauty of line.
2. Flat, or nearly flat, section of a roof over a

Are you ever embarrassed by mistakes in pronunciation?

Nothing reveals your culture—or lack of it—so surely

How many of these words *dare* you use in conversation?

hors d'oeuvre	pianist
exquisite	incongruent
impious	cuisine
Buenos Aires	rodeo
psychiatrist	Calles
irrevocable	faux pas
Fascisti	naive
courtesan	bona fide
Aphrodite	piquant
incognito	imprecatory
dishabille	fiduciary
cognoscenti	gibbet
intricate	indices
chic	salutary
Aida	jejune
demise	acclimate
canape	explicable
gauche	fiacre
supple	sinecure
verbosity	

Your speech identifies you. Correct speech is the first mark of education, of culture. Most of us are guilty, at least occasionally, of painful mispronunciation.

A Serious Social and Business Handicap

People judge you largely by the way you talk. Many intelligent men and women are seriously handicapped in social and business contacts by faulty pronunciation. Is *your* speech meagre and barren? Is it hard for you to express your ideas smoothly and forcefully? Must you grope for the right word and avoid any but commonplace words? You are cheating yourself of a tremendously effective business and social asset. *And it is no longer necessary.*

Now—learn by ear

The Pronunciphone Course consists of 7 double phonograph records (14 records in all) and a book which lists and defines 1900 useful words in the exact order they are spoken on the records. Your eye and ear are trained simultaneously. You get the fine shades of accent, and precisely the right voice inflection. Printed marks in a dictionary can never give you this.

Developed by Authorities

The Pronunciphone Method has been developed by Prof. Edward H. Gardner, for 18 years a member of the faculty of the University of Wisconsin, and E. Ray Skinner, Phonetician of the Department of Speech of the same university. The instruction is absolutely authoritative.

Enrich Your Vocabulary

In addition to hundreds of general words in the Course, there are words having to do with art, music, science, literature, history—also scores of foreign words and phrases that are now an essential part of the educated American's vocabulary. Send today for detailed information.

CLIP AND MAIL THIS COUPON NOW!

THE PRONUNCIPHONE CO.
772 Wrigley Bldg., Chicago, Ill.

Please send me free—illustrated literature about the Pronunciphone Course. *Note—If you have no phonograph, put (X) here* ☐ *for information on Special Combination Offer of Pronunciphone Course and new improved Q. R. S. Portable Phonograph.*

Here's an Amazing New Business THAT BRINGS BIG PROFITS QUICK

A SURPRISING new profit opportunity is now offered to every ambitious man and woman! A sensational new kind of food business has been invented that can be operated by anyone in either full or spare time. Now, almost incredible as it may sound, $100 to $1000 a month is possible in even the smallest cities!

We supply you with equipment and plans for making and selling a delicious new *greaseless* doughnut that is cooked in a remarkable electrical device. Easy to digest and more toothsome than old-style doughnuts ever were. This delicious new dainty—Brown Bobby—costs less to make and sells four times as fast. No wonder so many people without one bit of experience are literally cleaning up fortunes with this new money maker.

You can open a shop; rent cheap floor space in a grocery, delicatessen, lunch counter, drug store, etc. Or start at home—and make good profits your very first week!

LOOK!
"I made $3000 in 3 months from my greaseless doughnut business!" Thos. Minch, Fla.

Men and women start in this business daily. You cannot afford to delay. Details will gladly be sent without obligation of any sort. Such an amazing money maker may never be offered you again. Write at once for full plans and details.

FOOD DISPLAY MACHINE CORPORATION
Dept. 14-55, 500-510 N. Dearborn, Chicago, Ill.

sun parlor, bay window, or small porch.
3. (a) Copper, (b) lead, (c) zinc, (d) firwood, (e) galvanized iron, (f) painted tin.
4. (a) One that tapers toward the heavier butt end in thickness, (b) manufactured shingles, usually cut four or five to a strip.
5. Cedar.
6. (a) Pitch distilled from wood, (b) used to preserve shingles by dipping or coating them.
7. Copper.
8. (a) Wood, (b) asbestos cement, (c) slate, (d) zinc, (e) copper, (f) slate-surfaced asphalt and felt, (g) clay tile, (h) cement tile.
9. (a) Slate shingles, (b) lime for cement, (c) asbestos.
10. Permanency.
11. Triangular end of a wall, above the height of the side eaves.
12. (a) Slate, (b) copper, (c) tile, (d) asbestos cement, (e) zinc, (f) lead.
13. Pipe (usually metal) to drain roof eave trough into rain barrel, sewer connection, or other disposal place.
14. (a) Sheet copper, (b) sheet tin, (c) sheet zinc, (d) thatch, (e) roll roofing, (f) canvas.
15. It is almost vertical, the lower section being pierced by windows.

Answers to Home Building Quiz No. 4—Heating and Insulation

1. (a) Retaining the heat within the house and keeping out the cold in winter and (b) keeping out the heat in summer.
2. A warm-air furnace having but one pipe or duct to convey heated air up-stairs.
3. Automatic device for controlling rate of combustion in heating plant, thus regulating temperature in rooms.
4. (a) Furnace, (b) boiler.
5. (a) Cleanliness, (b) labor-saving, and (c) quick-heating response.
6. Zero outside with 70 Fahrenheit required inside.
7. (a) Sugar-cane fiber, (b) cork, (c) mineral wool, (d) animal hair, (e) eelgrass seaweed, (f) magnesia, (g) asbestos, (h) flax, (i) wood pulp or fiber, (j) vegetable fiber, (k) paper, (l) plaster composition.
8. (a) Warm air rises and greatest heat leakage is through roof in winter, and (b) in hot weather sun's heat penetrates mainly through the uninsulated roof.
9. Irregularly built house because of long, angular pipe runs; most satisfactory in rectangular or square buildings.
10. Warm air, steam, hot water, vapor.
11. (a) 30 feet, (b) 35 feet.
12. Rarely more than two in same chimney, for (a) heating plant and (b) fireplace. If cook-stove requires flue this means a third (c). A (d) chimney-fed garbage incinerator would require a fourth. Four flues would require two chimneys for good draft.
13. Two feet above, otherwise poor draft and wasted fuel.
14. (a) Gypsum plaster board, (b) sugar-cane fiber board, (c) cork board, (d) wood fiber board.
15. To permit air compressed by steam to escape and then close to prevent return, thus creating a partial vacuum retaining heat in system.
16. 30%.
17. Benjamin Franklin: The Franklin stove.
18. (a) Single piping only necessary, double sometimes used. (b) Double piping required.
19. Gas and oil.
20. Large open fireplaces, interior exposed surfaces of chimneys through rooms, and retained oven heat.

Answers to Home Building Quiz No. 5—Living-room

1. Piano.
2. (a) Plastic finish plasters, (b) lime finish plaster, sanded or rough-textured, (c) paint, (d) wall paper, (e) cloth or oilcloth fabric.
3. Hall is eliminated, thus saving space, and heat travels better up to second floor.
4. Paneled walls are blocked or framed off with use of moldings, or by combining wall finishes and color; wainscoting is paneled or solid trim encircling a room from baseboard part way up the side wall.
5. Sun in morning, cool in afternoon and evening when most used.
6. (a) oak, (b) maple, (c) birch, (d) beech.
7. Concealed bed in closet, or bed davenport as part of furnishing.
8. A balustrade is a stair hand-rail supported by balusters, a set of small vertical pillars.
9. In an unobtrusive color blending into the color scheme of the room.
10. Rough wall finish, in regular plaster or the new plastic finishes.
11. Windows on two or three sides of living-room provide cross-ventilation and best natural light and air.
12. (a) Brick, (b) tile, (c) artificial cast stone, (d) local or field stone, (e) marble, (f) plaster.
13. Oak, maple, or birch.
14. Linoleum.
15. (a) Bookcase, (b) window seat, (c) desk.

Answers to Home Building Quiz No. 6—Miscellaneous

1. Eight lineal feet of unbroken wall space.
2. S-shaped curve in waste-line pipe, holding water and stopping return flow of sewer gas.
3. For economy of pipe runs.
4. Waste-disposal tank buried out-of-doors, wherein waste undergoes a chemical decomposition and passes off in the form of water or liquids.
5. For access to sleeping porch, open floor porch, balcony, or loggia.
6. (a) Tub, (b) washbowl, and (c) toilet.
7. Instantaneous hot-water heater.
8. Sewerage, water, and other connections made, together with pipe runs and plumber's first and highest overhead covered with cost of first bathroom, lowering cost for installing second bathroom.
9. Enameled ironware, vitreous ware, porcelain.
10. Moisture and steam more likely to warp wood lath and loosen and crack plaster. Metal lath stronger backing for tile.
11. Shower bath.
12. (a) Fiber tile board, (b) asbestos cement wall tile board, (c) sheet steel tiling.
13. (a) Soap dish, (b) tumbler holder, (c) metal mirrored medicine cabinet, (d) tooth-brush holder, (e) built-in wall heater (electric or gas), (f) towel rack.
14. Inner surface smoother than other pipe and will not rust, so water flows faster and more freely.
15. Aromatic red cedar.

Answers to Home Building Quiz No. 7—Kitchen and Laundry

1. Thirty-six inches from floor to rim.
2. (a) Cylinder, (b) oscillator, (c) vacuum cup, and (d) agitator, or dolly.
3. A single faucet wherein hot and cold water are mixed to desired temperature and flow, at housewife's control.
4. Oven heat regulator.
5. (a) Linoleum, (b) rubber tiling, (c) glazed clay tiling, (d) cork tiling, (e) hardwoods.
6. Steel basement windows.
7. Sink should be located preferably directly under a window, and it should always have a lighting fixture on the adjacent side wall or ceiling above it.
8. Curved long-neck faucet allowing for easier filling of vessels and utensils.
9. Hot, glaring, hard to ventilate.
10. Dining alcove, or breakfast nook.
11. (a) Food center with work table. (b) Heat center and stove. (c) Water center and sink.
12. By providing a built-in self-locking package receiver in service entry.
13. For ease of draining electric washer, tubs, pails, etc., and general sanitation.

DANDRUFF

A Sure Way to End It

There is one sure way that never fails to remove dandruff completely, and that is to dissolve it. Then you destroy it entirely. To do this, just apply a little Liquid Arvon at night before retiring; use enough to moisten the scalp and rub it in gently with the finger tips.

By morning, most, if not all, of your dandruff will be gone, and two or three more applications will completely dissolve and entirely destroy every single sign and trace of it, no matter how much dandruff you may have.

You will find, too, that all itching of the scalp will stop instantly and your hair will be lustrous, glossy, silky and soft, and look and feel a hundred times better.

You can get Liquid Arvon at any drug store, and a four ounce bottle is all you will need.

This simple remedy has never been known to fail.

14. Kitchen dresser or cabinet.
15. Dishwasher built into sink.

Answers to Home Building Quiz No. 8—Electricity, Gas, Oil

1. Thomas Alva Edison.
2. Kilowatt hour, unit of quantity by which electric current is measured.
3. (a) Electricity, (b) gas.
4. (a) Oil burner, (b) gas burner for house heating.
5. Benjamin Franklin.
6. (a) Gas, (b) coal, (c) oil, (d), electricity, (e) wood.
7. (a) Chimney-fed built-in or (b) gas-fired garbage incinerator.
8. Wall receptable supplying current for operating electrical attachments.
9. (a) Gravity feed and (b) motor-driven.
10. Switch permitting control of lighting from either of two different points.
11. Gas (a) log and (b) open grate burner; and electric (a) artificial coal grate, (b) glow grate, and (c) log.
12. Either (a) short circuit or (b) abnormal load or overloading circuit.
13. Light thrown upward to ceiling from which it is reflected in a soft equal glow throughout the room.
14. (a) Instantaneous coil heater and (b) automatic storage tank, using (c) gas, (d) coal, (e) electricity, and (f) kerosene oil.
15. Every 50 square feet.

Answers to Home Building Quiz No. 9—The Site and Finance

1. Twenty per cent or one fifth; better 30%.
2. Refers to a city ordinance or a condition in deed which places the location of a house a certain distance back from street line or from front lot line.
3. (a) Improved property has water, gas, electricity, sewers, sidewalks, and good (usually paved) streets, while (b) restricted property protects the owners against store and factory encroachments and other nuisances, as well as cheap houses not in keeping with the tone of the neighborhood.
4. A legal instrument giving conditions under which money is loaned on property, and legal description of the property.
5. Unit purchase cost of property usually is measured by the lineal footage across the front or street line of a lot, thus a 40-foot lot at $10 per foot front would be valued at $400.
6. 5% to 10%.
7. Process of paying off mortgage principal in stated small amounts at regular short-term periods.
8. (a) Title search is an examination of registrar's records to determine whether previous owners have acquired or sold a property in legal and proper manner. (b) Survey is a proper map of a property showing its "metes and bounds" and the location of all houses and outbuildings thereon. (c) Title guarantee policy is a legal paper given by an incorporated company after title search is made, such company making a business of guaranteeing titles and defending any court action against the property owner if title is attacked.
9. (a) Proximity, (b) scholarship standards, (c) denominational and high schools or trade schools.
10. (a) Municipal taxes, (b) county taxes, (c) special assessments, (d) insurance, (e) water tax or rental, (f) repairs and renewals, (g) improvements and accessories, (h) first and, frequently, second mortgages.
11. Savings (building) and loan associations.
12. (a) All cash, without mortgage. (b) Placing term first mortgage, usually for 50% to 60% of appraised value of land and buildings. (c) First and second mortgage method. (d) Land contract method. (e) Building loan mortgage method.
13. (a) Rock formations provide solid foundation footings and often rubble rock for foundation wall construction at a saving,

but rock excavation and blasting may increase costs. (b) Large trees are attractive and provide shade, yet if too close to the house they may cut off sunlight and air, creating dampness, and roots sometimes make trouble with pipes, walks, and foundations. (c) Hillside homes are attractive, making possible planning for interesting varying floor levels and basement garages, but drainage must be carefully studied and if on hilltop or exposed to sweeping winds, fuel bills increase.

14. (a) Contour, (b) drainage, (c) exposure, (d) outlook, (e) height, (f) existing trees.
15. (a) Builder or realtor. (b) Second mortgage institution for bonus varying from 5% to 20%. (c) Personal friend, relative, or attorney with client's funds to place.

The Show Must Go On

(*Continued from page 47*)

going to be with the circus too, and I hope you're going to be a much better clown than your pop ever was. But before you can be a clown, or anything else, there's one thing you must learn, and learn it so well you will never forget it. It's this: No matter what happens, the show must go on!"

Koko stroked the baby hand which lay so happily in his big brown one, and smiled into Eddie's rapt eyes.

"See, Ed, it's like this! Sometimes, maybe, I don't feel like going out and tumbling around in the sawdust. Lots of times, I'd much rather run away and see you; but every day, in every place I go, there are all the people waiting to see me; and, no matter how much I want to run away, I mustn't. No matter what I want, no matter what happens, the show must go on. So I stay, and act just as if I wanted to.

"Then again, perhaps, I feel sick, just like you do—sometimes. Or often, I'm sad because my boy's not with me. Then it's hard to act happy; but I do, because everybody expects me to. In the show business, we call it 'foolin' 'em!' And everybody, every single person in the whole circus, knows just what I've been telling you. That, no matter what happens, the show must go on! That's the tradition. Do you understand what your pop's telling you?"

EDDIE grinned at him. "S-s-sure!" he said, in his baby voice. "When I get to be a man, even if I got a stomach ache or pains in my back I've gotta grin, because all the boys and girls are waitin' to see me act."

"That's right. But you don't have to wait to be a man. This afternoon," Koko looked suddenly away from Eddie's eager eyes, "the circus is coming here. But something much more important is coming for you. It's going to mean that you can't see the circus this time; but it's going to mean that next year, maybe, you'll be with the circus, and with your old pop again."

Eddie's eyes and voice were full of anguished protest. "Miss the circus?" he quavered. "Me?"

"Steady, now. Wait until Pop tells you all about it: That big doctor with the beard that came to see you this morning

Digitized by Google Original from UNIVERSITY OF IOWA

says he thinks he can make you able to walk again; and he's going to try this afternoon, because tomorrow he has to go away, back to France. To do that, he's got to take you out of the ward, and do what they call an operation. Do you know what that is?"

"Yes, I know. Like Mike, that used to be in that bed." He indicated the spot with his tiny finger. "They didn't give him any lunch, and they put a white hat on his head and took him for a ride in a funny long cart with rubber wheels. He never came back, and I guess he must of got well, because Miss Beamish told us he wasn't ever going to have any more pains in his legs or anywhere else. . . . Why, Pop, what's the matter? You're not smiling, Pop! What you thinking about?"

"I was thinking of a promise I want you to make. Will you promise me something?"

Eddie nodded solemnly. "S-s-sure!"

"Will you promise Pop that when they put the funny white hat on you this afternoon, and take you away in the buggy-cart, you'll remember what I told you just now? That, no matter what happens, the show must go on! You can help the whiskery doctor and me and—yourself—if you will. If you feel kind of funny, just remember you've got to grin as hard as I have. If you do, you'll be 'foolin' 'em!' Promise now, you're going to remember that, no matter what happens to you, my old man, the show must go on!"

"I promise!" Eddie said with deliberation, and wondered why his father's eyes were brighter than usual.

"AND now which story shall it be first?" Koko called, and a spell as of sudden enchantment settled on the sunny ward while he talked; for Koko talked as he had never talked before, talked until the whole world of the circus seemed to come alive in the quiet of that place.

But even the best stories must come to an end sometime. At last Koko stood again in the doorway, waving a comic farewell to the ecstatic children.

"See you all this afternoon!" he grinned at them, his eyes resting long on the bed in the corner of the ward where a boy with daffodil-colored hair watched him with mute adoration. Then suddenly Koko crossed the sunny space between them, and lifted the child in his arms, holding him against his heart as though he would never let him go.

"Ed, my son," he said, his lips against the bright hair, "you won't forget what I told you, will you?"

Eddie snuggled his head into the curve of his father's neck. "I remember," he said.

"Let Pop hear you say it!"

Eddie's little voice repeated the words like a familiar lesson well learned: "No matter what happens, the show must go on. That's 'foolin' 'em!'"

They were silent for a brief moment, the man with the wee boy in his arms. Then Koko tucked Eddie into his bed again, turned swiftly and hurried away. This time he did not look back.

The green lawn of the hospital blossomed like a bright garden with children. They were everywhere, their heads nodding and bobbing like beds of flowers. The balconies around the court were full of children—little ones, middle-sized ones,

big ones, clapping excited hands, and voicing their approval in a pelting of happy sounds.

For the great hour had come and partly gone. Oh, what an hour to remember! First of all, there had been the rush of getting into the courtyard, a great adventure after four walls of a ward. Never before had the sunshine been so bright! From a distance had come the wavering melody of the steam piano; the courtyard gates had opened, and there was the circus, all ready and waiting to come in!

The calliope, festooned with gilded mermaids and bunches of grapes; white horses mincing along, guided by beautiful, pink-cheeked ladies with shiny dresses on; little ponies, just the right size for a boy, ridden by funny little men in high silk hats; elephants, lazily rolling, their big trunks swaying, holding each other's tail.

And seated on the first elephant's head laughing and chuckling and waving his hands in their big white cotton gloves—was Koko! Koko, Eddie's father, the man they had seen that very morning, only so different now, so glorious! Oh, to have a father like that!

There never was anything funnier than the chalk-white face with its perpendicular slits of eyes, its pink nose and its grinning mouth. And when Koko in his ruff and red and white spotted domino, slipped like a rag doll from his perch on the biggest elephant, and fell in a laughing heap right in the middle of the courtyard, the shouts of the children proclaimed that the circus had really begun.

Everything was wonderful, glorious and wonderful! The horses pranced and the spangled ladies jumped through paper hoops. The elephants knelt down just like great, big clumsy boys and said their prayers. The funny little men made pyramids and triangles and squares of themselves. Oh, it was grand!

BUT Koko was best of all! No matter what anybody else was doing, he was doing something funnier. He just didn't let you forget him for a minute. He was everywhere and into everything. The children gurgled and laughed and shouted, and called him by name, and loved him. Even the circus people laughed, as though he had never been so funny before.

They wouldn't have believed it if someone had told them that under the wide red grin on the white face Koko's mouth was set in a hard line, and under the painted silly lids his look was one of anguish, of despair. They would have laughed at you if you had told them that the ears which seemed to respond so eagerly to each approving shout were deaf to all the tumult, because one little voice was missing.

They had no way of knowing that in the brain which originated so many laughs for them, one torturing phrase was pounding over and over: "We've got to fool 'em. One chance in ten! Oh, Eddie, Eddie!"

And in a silent, white, shining room within the walls of the hospital two other people were tense with an emotion that gripped them as the joy of the circus gripped all the little spectators outside—the emotion of suspense.

In that white, silent room a big bearded man sat humped up in a chair by the side

Digitized by Google Original from UNIVERSITY OF IOWA

of a little white bed. On the other side of it, a crisp blue and white nurse with shiny hair under a pert white cap gripped tense hands in her aproned lap, and looked with stricken eyes at the little form so quiet under the white counterpane.

Doctor Ronssoy raised weary eyes and looked across Eddie's crib to Miss Beamish, and rose heavily from his chair.

"If he had been a bit stronger, Mademoiselle!" he sighed. "I have made it so that he can walk if he lives; but what can I do against such a frailty?"

Miss Beamish nodded. "I know!" she whispered.

"If I am—needed—I shall be near by. If there is anything I can do—" The shaggy man paused a minute in the doorway. "I fear, Mademoiselle, it is, however, beyond our power—now."

Miss Beamish did not answer, but reached beneath the smooth counterpane, and held Eddie's little hand, which lay in her clasp as quiet as the hand of a doll.

AS THE door closed without sound behind the doctor's big, drooping back, she leaned over the crib, gazing intently at the white flower of a face on the pillow, as though she would breathe into the tiny boy her own warm vitality. Bending close to the little figure, she whispered to him in a breaking voice.

"Oh, Eddie, you must—you must get well! Eddie, it's Beamy talking. Eddie, Eddie dear, don't you hear me? Open your eyes and look at me! Eddie, Eddie."

But the petals of eyelids did not move, and the pulse in the little hand that she held fluttered and wavered as though each uncertain beat would be its last.

Outside the courtyard grew quiet. The sunlight shifted and dimmed in the silent, white room. Miss Beamish still watched the quiet baby, and whispered to him. So intent was she that she did not hear the soft opening of the door; she started when a gentle hand was laid on her shoulder.

"Any change, Miss Beamish?" Doctor Curtis asked. "His father's here."

There was Koko, his silly clown's hat twisted between anguished fingers, the painted-on eyes strangely smudged in his white face. Miss Beamish looked at him, and shook a reluctant head.

The drooping figure in its gala red and white knelt by the bed and buried his head in his arms. Had the children seen him there they might have thought he was still laughing, for his shoulders shook.

"Eddie," he was murmuring, "you didn't fool 'em after all, did you? Oh, Eddie, come back to your pop! Come back, I tell you, Eddie!"

As if in answer to an imperative summons, a shadow of a tremor passed over the tender little face on the pillow, and the tousled gold head moved the faintest fraction of an inch. Then slowly, slowly, the eyelids fluttered open. In a voice smaller than the smallest whisper, Eddie's mouth framed the words of the lesson he had learned that morning.

"I'm foolin' 'em!" he said.

In the dimness of the shadows that had crept gently around the white crib, the Doc reached over and took "Beamy's" hand in his. And she so far forgot her professional dignity that she didn't seem to mind a bit!

Is Your Boy an "Outsider?"

BOYS!

Get your FREE Copy of the Daisy Manual from nearest hardware or sporting goods dealer. It tells how to be a crack shot!

Put yourself in your boy's place. When he sees other boys at target practice with their Daisy Air Rifles, *he* wants a Daisy, too!

Here's the sport of sports among boys! Even between father and son, target practice does untold good.

Many leading American athletes are advising your boy to be fast on the trigger if he wants to be fast on the baseball diamond and in other athletics. Experts say that target practice develops speed in the action of mind and muscle.

Give him a Daisy—for 40 years the standard boys' rifle—the rifle with which millions of alert and successful men of today started their training in marksmanship. Shoot with him out of doors. He will love his Daisy! Ask your dealer to show you the rifle illustrated—the famous Daisy Pump Gun—a 50-shot repeater for $5—and other Daisy Air Rifles, a model for every age, from $1 to $5—or sent direct on receipt of the price.

Ends Paring

Corns or Calluses

Stops all pain in 3 seconds

TOUCH the most painful corn with this amazing liquid. In three seconds all the pain is gone. Acts like an anesthetic. You wear tight shoes, dance, walk again in comfort!

No paring or cutting—that is dangerous. Besides the corn then comes back. This way loosens it. Soon you peel the whole corn off with your fingers—like dead skin. Works alike on corns or calluses.

Professional dancers by the score use this method. Doctors approve it as safe and gentle. Millions employ it to gain quick relief. There is no other like it.

Ask for "Gets-It" at your druggist. Money back if not delighted. There are imitations. Be sure to get the genuine.

"GETS-IT" *World's Fastest Way*

I Retired at Forty—But I Couldn't Stand It Long!

(*Continued from page 43*)

remember. Secretly, one of the motives for quitting work, which I didn't half acknowledge to myself, was the thought that I would be able to play every fine week-day instead of every fine week-end. I *was* "able" as far as opportunity went. But I ask you: Did you ever see the average golf club on a mid-week morning?

Some days, of course, there would be a prearranged foursome of good fellows, when some member was taking a day off to entertain an out-of-town customer. I got in on one or two of these. But, more often, there wouldn't be a mature and able-bodied male on the six thousand feet of fair green. Boys and girls, wives and sisters, old men and youths—that was the usual week-day roll call at my golf club. The gang I had always gone around with—the crowd that made the club for me—didn't show up until Saturday afternoon. And after a while, I didn't either.

As for the club in the city, it did what it could. It furnished comfortable chairs, all the latest periodicals, and many good books. But the mortuary character of any good club on, say, a Tuesday afternoon is beyond a busy man's imagining. I saw myself sitting there by those windows for the next twenty, perhaps thirty, years, smoking the same brand of cigars; and then, as my eyes failed utterly, easing myself gradually back into the deeper chairs in the darker corners—with no desire but to sleep, and nothing to do but do it!

I GAVE up the club and tried the Public Library. I could read there in an atmosphere that, while not so aristocratic, was certainly less soporific. To be sure, there were a few old men sitting about the long tables asleep over a volume of last year's "Punch;" but the great majority of the visitors walked with determined, purposeful footsteps. They went directly to definite points in the mysterious card catalogue that lined the walls. They wrote busily on little slips, and waited impatiently for big, solemn volumes, from which they made long extracts and copious notes.

I noticed that there was a sign on the table where I was sitting which read something like this: "These seats are for the exclusive use of students doing serious work." Very soon, a shabby little man, who was sitting next to me reading a newspaper, was asked to move away to make room for a bobbed-haired chit who struggled over to the seat under a load of church histories that would have warped a respectable parsonage library. The little shabby man looked rather sheepish; as if he had been caught pulling his ears or sucking his thumb. Just then, I saw a solemn library attendant heading my way. I knew my call had come, so I got up and walked out! I never went back.

I went out to dinner during the second week of my sentence—one of those etiquette-book dinners, where the men do not join the ladies until after an hour or so of he-man conversation. The talk opened with the usual humor, and continued with chronicles of the business day. Each guest had a story to tell of something which had happened to him between nine and five. I had nothing.

Not that I minded the chance to be silent. After-dinner stories always bored me. I had no ambition to bore others. The thing that troubled me was more subtle than that. I felt myself "out of it" on the listening end as well as the talking. My friends looked to each other for confirmation, for responsiveness, for the nod of understanding, for the laugh of appreciation. They seemed to treat me as a vacant chair. No one sat on me. No one put his feet on me. They were too polite for that. But they obviously treated me as a negligible factor in their masculine lives.

I had seen this thing happen before—but for other reasons. I knew one man who had been within a few short years an unknown, a success, and a failure; and I had seen his place in these after-dinner conversations rise and fall with the temperature of his bank account We all laugh a little louder at the boss's joke than we do at the office boy's. We weigh the words of a successful man far out of proportion to the importance he himself attaches to them. But once his business goes into bankruptcy, we assume that his sense of humor and his wisdom go with it.

Of course, my case was not like that. My decision to retire was in itself the best proof of solvency. But somehow I had missed the dignity which should have accompanied such a status. If I had been older, I might have received a comforting veneration. As it was, I received only indifference. I had put myself on the shelf. And my friends seemed determined to leave me there.

I'd meet a casual acquaintance on the street. I'd notice his lips starting to form the old greeting: "How's business?" then, the sudden shift to "How's the old boy?" I should have laughed. But I didn't. Instead, there usually occurred an embarrassed conversation in which he neither told me about his business nor inquired about mine. I suppose neither of us missed much. But you'd be surprised how little there is to talk about with the average casual acquaintance if you drop this topic out of your conversation.

THESE sidewalk meetings with old friends didn't occur very often. The sidewalks were there. So was I. But the old friends were busy—as I had been—behind flat-topped desks in high-up offices. I soon discovered that males who frequented the streets between lunch-time and tea-time, my usual hour of promenade, were a queer lot. Most of them were going nowhere in particular; and looked it. Others were intent, judged by their clothes and their companions, on a quick shift from luncheon dance to tea dance.

I felt old among the young fellows; young among the old ones. I had the misfit feeling that a man usually gets

when he stumbles by mistake into a beauty parlor instead of a barber shop. In fact, I had some such feeling most of the time.

I don't suppose I can hope to explain all the spiritual oozing that took place inside of me during the brief period of my idleness. What I *have* explained may seem simple to some. But little things troubled me more than big. Mentally, I was like those men on the street who weren't going anywhere. My thinking lost directness; my conclusions lost definition; my decisions didn't stick. I had no intellectual pep. I didn't even have leisure or freedom or time. I was so busy doing nothing that I didn't do any of the things I had looked forward to doing. I didn't read any more books than I used to. I read the newspaper longer, but with less zest. I could have gone to the Art Museum every afternoon and to the opera every evening; but, of course, I didn't; I didn't even go to the movies. I just wandered around with a spiritual clubfoot. I wasn't any darn good. And I knew it.

WHAT happened after that can be of little interest to anyone except me. But just to complete the record, I will tell it briefly.

One day, after walking the streets with the tea and dance boys until I couldn't stand it any longer, I stepped into a store on Forty-second Street, and bought a portable typewriter. That night and the next morning, I did nothing but write. For sixteen hours, I worked steadily at my new job. By noon, I had a full-length magazine article neatly typed. Three days later, I had an acceptance from a well-known magazine editor; and the following week, a check.

I cannot tell you how much self-respect I banked along with that check. But it was considerable.

I am in business again. Not the old grind, of course. But a very real one. Before, as a publisher, I was engaged in the making of one magazine. Now, as a writer, I am helping in some degree to make many. I write under four different names for many kinds of periodicals. An editor told me the other day that I write more industriously than any other contributor to the magazines. I don't know about that. But I do know that I have made a business of writing, a nine-to-five business; and that I am very happy.

In fact, the most important thing that has happened to me since I went back to work is something that has happened in my own heart: I have regained in labor the happiness that I lost in leisure—the happiness that is work!

ALL MEN who are in business, or who are affected by business conditions (that means everybody), will find in next month's issue a fascinating, critical analysis of the present relation between business and politics. This is a Presidential election year, and by tradition such years show a falling off in trade. But need this be true? Is there now any reason for business to fear politics? There is not, says the greatest business statistical expert in the country. This article is more than interesting—it is important! And it is important to *you*.

Not Even the Elephant Knew

(*Continued from page 26*)

into the spirit of the occasion by donning the clothes he reserved only for receiving royalty, and thus attired he bowed all the guests into the salon. It was a big party.

"That night," concludes Houdini, "Mother and I remained awake all night talking over the affair, and if happiness ever entered my life to its fullest, it was in sharing Mother's wonderful enjoyment at playing a queen for a day. The next morning, after having lived two ecstatically happy days, I escorted the Fairy Queen Mother en route to America."

Houdini does not mention that he had to borrow car fare to get out of town.

Thereafter ensued a succession of triumphs for Houdini, throughout Germany and in cities of other continental countries.

At the Colosseum, Essen Ruhr, in May, 1901, his engagement was extended from ten days to an entire month. The front doors had to be removed and a side wall torn down to enlarge the space for standees (who were charged eight marks) and the full stage was sold out at premium prices. The men at the Krupp works devised a new handcuff and challenged Houdini to free himself from it. On the night of the trial the Krupp force bought up the whole house. Houdini got himself free from the Krupp cuffs in a few minutes, and found himself a great hero.

The Circus Corty-Althoff was famed for its horses. Because of a contagious disease, the horses were all condemned and slaughtered by the German Government, and a circus without horses was unheard of. In despair, Herr Direktor Althoff engaged Houdini, to join him at Dortmund. As soon as Houdini arrived he visited police headquarters and escaped from the heavy irons that had been worn by a murderer who had been put to death three days previously with the irons on him. With this sensational start, Houdini proceeded to break all records for the horseless circus.

A series of similar successes followed the circus engagement.

IT WAS during the engagement at Hanover that Houdini was first able to make a profound impression with his straitjacket escape.

After he had escaped from the police manacles, Count Schwerin, who was chief of police, suggested that his warders had a straitjacket for violent prisoners which was probably the only restraint in Germany that could hold Houdini. "Lace me in it," demanded Houdini. The straitjacket was indeed a formidable restraint, of heavy canvas reënforced with thick leather.

It took Houdini one hour and twenty-nine minutes to get free, and by that time he was a mass of bruises and his clothes were in tatters. "The pain, torture, agony, and misery of that struggle will live forever in my mind," he wrote in his diary. But the feat was worth while. It created a real sensation among the German public. By the time Houdini quit Germany for a period in December, and opened in Paris at the Olympia Theatre, he was able to command the highest salary that had ever been paid there to a foreign performer.

Returning to Germany, for an engagement at Cologne, Houdini found himself facing a serious threat to his career. It was part of the duty of the Kaiser's bailiffs to protect the public against fraudulent performers, and some of the hounds of the law exercised their powers without much discrimination. In Cologne, a police officer named Werner Graff published an article in the "Rheinische Zeitung" denouncing Houdini as a charlatan and his handcuff act as a swindle. With American intrepidity, and a shrewd eye to publicity values, Houdini decided to hale Werner Graff into court and fight the thing to a finish. He brought suit for criminal libel.

Houdini had prepared for the case before the libel was brought. He had not entered on his career of jail-breaking and freeing himself from handcuffs in German cities without careful preliminary training. During his first engagement at the Wintergarten, Berlin, he unostentatiously apprenticed himself to a Berlin locksmith. During the two months of his stay in Berlin Houdini spent from six to ten hours a day working in this man's shop, particularly picking locks. In order that Houdini could familiarize himself with the locks used on police chains in Germany, the man ordered assortments, in quantity, of certain patterns, and would later exchange them for others. Before he left Berlin, Houdini felt pretty well assured that there was not a single type of lock used in Germany from the time of Theodoric that he could not pick.

WHEN Houdini's suit came to trial in Cologne, the police officer stated that he could prove Houdini a fraud by chaining him up so that he could not escape. Accordingly, Houdini was very solemnly chained. After a glance at the lock, Houdini stated that he was willing to release himself under the eyes of the judge and jury, but was unwilling to let others see him operate. This was an impressive bit of showmanship, and it flattered even the judge. The court was cleared, and, standing in front of the judge, Houdini whisked his chains off so quickly that none of the spectators was the wiser about his method of operation. The next morning the young American's triumph over the Kaiser's police went through the German press.

However, Werner Graff and his associates appealed for a new trial before a higher court, and five months later they marched into the courtroom with a lock specially prepared for the occasion, a master-work of master mechanics, which, they proudly announced, when once it was locked, could not be opened even with its own key. With this contraption locked upon him, Houdini was allowed to retire to a room selected by the jury, where he could work unhindered. In four minutes he smilingly reëntered the court-room and handed to the judges the lock, opened.

Werner Graff took an appeal to the highest court. There was much legalistic argument. Houdini, the Schutzmann admitted, had indeed opened certain cell doors and handcuffs, but Houdini advertised also that he could open safes, and he had not opened a single safe in Germany. Therefore, Werner Graff contended, the libel should be dismissed.

Finally, the justice wearied of the argument. He declared that he had a safe in his chambers, which offered an easy way of settling the dispute. If Houdini could open it, obviously Werner Graff had lost his case. If Houdini failed to open it, there was merit to the Schutzmann's contention.

HOUDINI was in a dilemma. He had never tackled a German safe, and he suspected that this untested strong-box might have a secret in its combination that would prove beyond his skill. However, there was nothing to do but accept the test. He requested that he be permitted to work at the safe alone, and this plea was granted.

The justice himself led the way to his chamber, and indicated a heavy steel chest of German make against the wall.

Glancing significantly at his watch, he said: "You will summon the court as soon as you are ready." Then he closed the door and Houdini was alone in the room.

For a minute or so Houdini dared not take a step toward that formidable box. Either his continental career was to end ignominiously in that room, or not, and his mind was doubtful about the outcome.

Finally he forced himself to cross the room, and he gave a vicious yank at the safe door. It swung open—it had not been locked!

After a decent interval he called in the court to reveal his task accomplished.

Werner Graff was fined thirty marks, as well as all costs of the three trials, and was compelled to publish a public apology!

Thereafter in Germany Houdini was more than a handcuff king and distinguished "Ausbrecker." He was the young man who had actually whipped the *polizei* in a court of law.

Houdini's career through this period resembled a dream of an inspired press agent. Each engagement was a fresh triumph. His progress was a succession of broken records for crowded houses. Everywhere, in public demonstrations to attract attention to his shows, he whisked himself out of the jails as if the locks were made of putty. In Leicester, England, he broke out of a cell which had been specially built by Oliver Cromwell for military prisoners. In Leeds he got free from a famous murderer's cell. At Sheffield they had a murderer's cell which, the local police boasted, had held a noted jail-breaker and the most dangerous criminal England ever had. They thought they had special knowledge about steel restraints in Sheffield; but Houdini walked out of the steel box a few minutes after they had manacled him and locked him in. At Huddersfield a new jail was the pride of the town. Before locking Houdini behind the bars the chief of police confined

"My Premier Duplex freed me from the slavery of cleaning"

Says: *Mrs. Harry Quesnell,*
1718 Chicago Ave., Minneapolis, Minn.

"I would rather let my Premier do my cleaning in an hour or so and then go out and enjoy myself than work like a slave all day and then go to bed all tired out like I used to. I paid for the cleaner out of money I saved on doctor bills and I feel like a new person now."

"I used my Premier for sweeping, dusting, cleaning mattresses, stuffing pillows, drying my hair—in fact, for all sorts of cleaning. It is wonderful how I caught the dirt from corners and crevices that were impossible to get clean before. I seldom touch a broom now and my hands are in fine condition—not calloused and hard as they used to be. You would not think that I clean a twelve room house to look at my hands today. And I can hardly believe that I do—my Premier makes it so easy!"

If you would like an interesting booklet containing the experience of women in every type of home from coast to coast, just ask the nearest Premier Family dealer or write to us direct.

Premier Pic-up

⅓ the size, ⅓ the price of Premier Duplex but the same high quality, durability and efficiency. Weighs but 4 pounds. Ideal for cleaning automobile upholstery, clothing, mattresses and carpets.

Premier Duplex

ELECTRIC VACUUM CLEANER CO., INC.
Dept. 205 Cleveland, Ohio

Distributed and serviced throughout the United States by the Premier Service Co., with branches in all leading cities.
Manufactured and distributed in Canada by the Premier Vacuum Cleaner Co., Ltd., General Offices, Toronto.
Sold over the entire world, outside of the U. S. and Canada by the International General Electric Co., Inc., Schenectady, New York.

Premier Junior

⅔ the size, ⅔ the price of Premier Duplex, but the same high quality, efficiency and durability. Takes a third less closet room. Ideal for apartments, bungalows and small homes.

A Premier for every purse and purpose

him in heavy chain-gang manacles. Houdini was out almost as soon as the chief had turned his back. In Holland, on tour with the Corty-Althoff Circus, in the summer of 1902, he had himself manacled and chained to one of the wings of a huge windmill, with the idea of freeing himself. The wing broke and he narrowly escaped being crushed to death, but the publicity attendant on the stunt did not suffer from the mishap.

Of course, with all this sensational advertising Houdini's earnings were jumping. At Leeds, playing on a percentage basis at the close of 1902, Houdini's takings for the week were £200, and for a return engagement, shortly afterward, they reached £250. These were exceptional weeks. But only three years before Houdini had looked upon an engagement at $60 (£12) for one week as a stroke of good fortune.

ON SEVERAL occasions his challengers gave him a lively time, especially when they were not inclined to play fair.

At Blackburn a local Strong Man, who challenged Houdini, manacled his arms behind his back with six pairs of heavy irons furnished with clanking chains and heavy padlocks. In trussing Houdini the man twisted his arms into such an unnatural position that they were soon blue from lack of circulation. When Houdini asked that the bonds be eased, the Strong Man retorted "Get out or give up." After nearly two hours of struggle, Houdini emerged free, with torn clothes and bleeding arms.

By 1903 Houdini was such a success that "Handcuff Kings," many of them claiming to be the original article, were springing up all over Europe. Most of them were poor charlatans who escaped from prepared cuffs that either had no locks whatever or were cleverly made so that the lock would be released by pressing a secret spring. Others were skilled performers who had managed to pick up some of Houdini's secrets.

Some of the "Handcuff Kings," particularly the frauds, made a point of advertising that they had worsted the great Houdini in a public contest and wrested his laurels from him.

While touring Holland with the Circus Corty-Althoff in the summer of 1902, Houdini received from a friend in Dortmund the advertisements of one Kleppini, who described in fat type how he had escaped from all of Houdini's handcuffs while he had left Houdini standing helpless on a public stage, securely fastened in Kleppini's cuffs.

Houdini wangled a leave of absence from Herr Althoff, and, packing a small grip with an assortment of irons, took the first train for Dortmund. Disguised as an old man, he went to the circus where the man was performing, and in the midst of Kleppini's speech telling how he had defeated Houdini, the latter leaped on the stage, tearing off his false beard in the dramatic manner he loved, and cried: "I am Houdini. I dare you to let me lock you up. Here are five thousand marks if you can escape."

Kleppini managed to evade an immediate trial of skill, but the crowd jeered at him, and afterward his manager felt compelled to call upon Houdini at his hotel and discuss terms for a challenge.

Incidentally he insisted upon inspecting Houdini's collection of cuffs. A French letter cuff, opening by a combination of five letters, attracted his attention. After expressing his admiration for the workmanship, the manager, in a tone of feigned indifference, asked what combination of letters opened the cuffs. Houdini, seemingly falling into the trap, first exacted a promise that the manager would not tell Kleppini. Then he said that the combination formed the word "clefs" (keys), and showed the man how the cuffs worked.

The next evening when the American appeared at the circus, with his collection of cuffs for the trial, Kleppini at once pounced upon the French cuffs. He dashed off to his cabinet with them and presently returned with an air of triumph.

"I will open these cuffs," he shouted. "I challenge Houdini to lock them on me!"

Such was the man's eagerness that Houdini had difficulty in getting the cuffs away from him, but he in turn insisted upon inspecting them for a minute, which was enough for his purpose. At nine o'clock the irons were formally snapped on Kleppini and he bounded into his cabinet, shouting that he would be out free in a few seconds.

"Ladies and gentlemen, you may all go home," said Houdini. "I do not lock a cuff on a man merely to let him escape."

By 10:30 the last circus act concluded, but Kleppini was still in his cabinet. An hour later the last jeering burgher had departed and Manager Sidoli instructed his stage hands to pitch the cabinet, with Kleppini in it, off the stage. Kleppini, still manacled, ran into the manager's room, and before another hour was up he sent his wife to Houdini begging to be released.

Houdini refused to go to him until newspaper witnesses had been summoned.

"Didn't you guess that I would change the combination out on the stage when you handed me back the cuffs?" asked Houdini. "Look. The letters now spell a good American word."

Quickly he turned the five-letter combination until the letters "F-R-A-U-D" came together, and the handcuffs fell open.

IN THE spring of 1903 Houdini determined to add Russia to his conquests, and accepted an invitation to open at the Establishment Yard, in Moscow, in May.

Before his engagement began Houdini went to the Moscow headquarters of the secret police with the request that he be allowed to demonstrate his skill on their restraints. First the officers demanded some tricks, so Houdini demonstrated three-card monte and the old American shell game, the stand-by of our county fairs. None of the various officers could pick the queen among Houdini's three cards and none could pick the shell which housed the little pea, even though he performed very slowly. Instead of being complimentary about his skill, they seemed to resent it, and when he suggested a test of jail-breaking, the chief, Lebedeff, replied that he might try to escape from the "carette"—if he could—whereupon the other officers nudged one another and laughed.

A "carette" did not sound very formidable, but it proved to be a sort of steel safe on wheels, with two heavily-barred air vents, used for transporting the Czar's very special prisoners to Siberia. Houdini declared that he would take a chance at it, and there was more Tatar amusement.

First he was stripped and searched, and as soon as they started searching him Houdini realized that he had never really been searched before. He was laid on a table and one man started at his head and worked down to his feet, while another started at his feet and worked up to his head. Then he was turned over and the dual process was repeated. His body was then twisted and turned in every imaginable way.

Stark naked, he was led out into the prison yard, which was very cold. The carette was searched in the same meticulous manner, and finally Houdini was locked in. It was not until the door had been firmly fastened behind him that Chief Lebedeff informed him that the key used for locking the prison van did not unlock it. The nearest unlocking key was in the possession of a prison warder on the Siberian border, about twenty-one days' journey distant from Moscow. "It would be a cold trip," remarked Lebedeff politely.

HOUDINI had stipulated that the carette be backed against the prison wall, so that he might work in secret. On the inside the door was merely a smooth sheet of steel, without any sign of a lock, but with a little high window six inches square, divided by four bars. The lock was on the outside of the door, about thirty inches below the window. Through the awkwardly barred window aperture Houdini had to do his work. For half an hour he struggled with the lock, while the police chuckled outside. Then, after a short rest, he resumed, and forty-five minutes after he had been incarcerated, the door swung open. Houdini was utterly exhausted and streaming with sweat, despite the cold.

As Houdini stepped out, he expected a chorus of applause, but instead he was immediately seized and searched all over again. Lebedeff had promised Houdini a certificate if he escaped, but Houdini was unable to secure this.

No newspaper men had been permitted to witness the test, but the story got about and Houdini became a popular hero, for everyone hated the secret police. Great throngs stormed the doors of Establishment Yard to see him, and the manager doubled his salary. Originally he had come to Russia for one month. His stay was prolonged to four, including a brief engagement at St. Petersburg, and three weeks at the famous Nizhni-Novgorod fair.

When Houdini reached St. Petersburg the Grand Duke Sergius invited him to give a special exhibition at his palace. Houdini performed there before a distinguished company. At the conclusion of his acts the Grand Duke announced that for over a month he had had the best locksmiths of the Empire building a chest for him which could not be unlocked. If Houdini really had power over locks, he could demonstrate it by opening that chest. A curtain thereupon was drawn aside in a corner of the hall, revealing a formidable steel casket.

Houdini said he would make the trial under three conditions: First, he must be allowed to inspect the chest, not necessarily alone. Second, he was to be

A REAL JOB *For Real Men*

This great nationally known corporation, the leader in its field in America, is now allotting exclusive territory on either a Spare-Hour or Full-Time basis to honest salesmen and saleswomen who furnish good references and who can handle successfully our various lines.

You Can Sell Everyone Everywhere

Personal and Commercial Stationery, Commercial and Professional Removal and other Announcements, Wedding Announcements and Invitations, also three distinct lines of Xmas Greeting Cards to sell respectively to stores, banks, business houses, professional people and individuals.

This is a life-time proposition on a very liberal and immediately paid commission basis, offering an opportunity for you to secure promotion in just a few months to a District Managership position where you will put out your own sub-salespeople and build up a permanent business of your own, worth from $6,000 to $12,000 a year.

All necessary samples, stationery and advertising are furnished at our expense.

Address immediately in full as follows

Troy at 21st Street, Chicago

stripped and subjected to a complete examination by surgeons before he attempted to open the chest. Third, the lights must be out for thirty seconds when he tackled the box.

The conditions were accepted. Houdini examined the lock system while a guard of Cossacks looked on. He was taken to an anteroom, where he removed his clothes and physicians searched his person thoroughly, including the orifices of his body. Then, still under guard, he walked up to the chest, the lights snapped out, and when they blazed on again, half a minute later, the big casket lay open.

Years later, recalling the incident to a friend in New York, Houdini was asked to explain the miracle.

"There is one place where ordinary people do not think to look," he said. "I had my lock-pick fastened to the sole of my left foot with surgeon's cement."

"Suppose they had asked you to lift your feet?" said the friend.

"I had several lines of defense. My patter was designed to make them do the thing the way I wanted it done. I gave a few false trails. Then, if worst came to worst, you know that I can do a trick or two with my toes. I was confident that they could never find anything."

Houdini's earnings for the week in which he gave the private exhibition before the grand duke were £350, a high record for a performer in Europe. He was only twenty-eight years old.

RETURNING to England, Houdini continued his triumphal progress. In every town ambitious newspaper reporters, locksmiths, police officials, and rival magicians poured upon him with a succession of handcuff challenges, and Houdini escaped from their restraints with increasing ease.

At the London Hippodrome, in March, 1904, he faced one of his most difficult tests. A representative of the London "Daily Mirror" had discovered a blacksmith of Birmingham, who, after five years of labor, had devised a lock which, he asserted, no human being could pick. The blacksmith had fitted his lock on a pair of handcuffs riveted to a piece of tubular steel like a sawed-off gun barrel. The "Mirror" submitted this restraint to the best locksmiths of London, who unanimously declared that it was a perfect piece of mechanism. With this backing the "Mirror" challenged Houdini.

At a matinée, before a highly excited audience of four thousand, a "Mirror" man snapped his "darbies" over Houdini's wrists, and the performer retired to his "ghost house" to wrestle with the strange lock. After half an hour Houdini emerged, his collar broken and water streaming down his face, and asked for a pillow to kneel on, as his knees hurt. The "Mirror" man, mindful of confederates with hidden tools, went out and procured a pillow himself. Twenty-five minutes later Houdini appeared again, still handcuffed, and apparently greatly exhausted. He requested the challenger to remove the handcuffs for a minute, in order that he might take off his coat.

The representative of the "Mirror" cannily refused. Houdini had seen the cuffs locked, but not unlocked, and the challenger sidestepped giving him that advantage. Houdini then, after some maneuvering, managed to get a penknife from his waistcoat pocket. This he opened with his teeth. Then, turning his coat inside out over his head, he proceeded to cut it to pieces, while the crowd shouted.

Again he vanished into the cabinet, and just as the crowd was settling back for another long wait he bounded out with the gleaming handcuffs dangling open in his hand. The task had taken him seventy minutes. It was a mighty victory. With a roaring crowd behind him he was carried home in triumph to his lodgings, and the next day all the London papers gave fulsome accounts of his achievement, with the "Mirror" yielding a particularly handsome tribute. Within a few days Houdini was signed for a tour of sixteen weeks at a salary of £150 ($750) a week.

At the conclusion of this tour, having conquered Europe and in four years sprung from complete obscurity to a foremost position among European entertainers, Houdini decided to tackle his own country. His diary for May 27th contains, in eloquent emphasis, the single passage, "Arrange to SAIL FOR HOME." His pockets were jingling with money, but he characteristically decided to go back second class, as he had come. Though he went about squandering money as fast as he made it on books, souvenirs and playbills of every sort, and on numerous personal benefactions, he was always most frugal in the matter of lodgings and travel, and almost invariably entered the cost of such items in his diary, not infrequently complaining that the charge was too high. Martin Beck, who happened to be traveling on the same steamship with Houdini this trip, offered to pay the extra expense if Houdini would move into the first cabin, but this offer was rejected.

"I'd rather travel as I am," commented Houdini, noting the offer in his diary.

DURING his first trip to Europe Houdini developed an avocation from which, for the remainder of his life, he got almost as much enjoyment as he did from breaking out of jails or vanishing from sealed chests. For the first time in his life he had more money than he needed, and also, playing only two shows a day at first-class houses, he had more leisure than he ever enjoyed before. From his early years he had the habit of poking into old book shops, picking up second-hand books on magic whenever he could afford them. Now he had ample time to prowl about to his heart's content and money to buy what he wanted.

Thanks to Houdini, the collector, the Library of Congress in Washington can boast a remarkable assemblage of volumes on magic and spiritualism, many of the volumes dating back to the earliest literature on these subjects. Houdini had gathered some 5,200 of these books, some of them of great rarity, and he bequeathed them to the library on the suggestion of his friend Dr. Henry Ridgely Evans of Washington.

More unique, even, was his collection of playbills of magicians of older days, and newspaper clippings describing their performances. Houdini left some 40,000 of these magicana, including mementos of all the principal Occidental practitioners of the art.

In later years the zeal for collecting led Houdini into fields other than magic. Lincoln was one of his heroes, therefore he

If I lived in the suburbs

there would be trips to and from the station along dark roads; there would be guests to see off in motor-cars; there would be dozens of situations where only a good flashlight would fill the bill.

And I would load my flashlight with genuine Eveready Batteries, to be sure of strong, white light every time I called for it. Yes, *Sir,* the battery's the thing, and Eveready's the battery. Remember this!

Get the flashlight habit. It's just common sense, Man!

accumulated the largest number of Lincoln letters held by a private collector. He followed this with similar large collections of the letters of Robert G. Ingersoll and Clyde Fitch. He owned the original Martin Luther Bible, with marginal notes in Luther's own hand, and he treasured the portable writing desk used by Edgar Allan Poe.

For several months after Houdini's death, rare books, pamphlets, playbills, and miscellaneous articles, for which he had left standing orders, poured in upon his executor from almost every part of the world. The aggregate charges for these posthumous additions to his collections ran close to twenty thousand dollars.

Once, on a visit to Dresden, where he went to see an old magician, Houdini discovered the neglected grave of Bartolomeo Bosco (1793-1863), one of the most famous of sleight-of-hand artists, whose name is still used by fakirs who eat 'em alive at county fairs throughout Europe and America. Bosco amazed Europe for many years with his feats.

Houdini found that the leasehold of Bosco's grave was about to expire, and Bosco's bones would be removed to the potter's field, and he bought a perpetual deed to the plot so that the famous old performer could lie in peace. The deed is now owned by the Society of American Magicians. This was the first of over half a dozen graves of magicians that Houdini purchased during his life.

"QUIT Your Kidding," said Doc Kinkade when he was asked to loosen up about his life. In case you've forgotten who Doc Kinkade is, he is the modest mechanical genius who tuned up the "Spirit of St. Louis" for Lindbergh's epic flight to Paris. He also tuned up for Chamberlin, Byrd, and many others. "Doc Kinkade," says Commander Byrd, "is the man who put us across the ocean and the North Pole." Next month, the famous navy aviator tells you the story of Kinkade and his unheralded triumphs.

High Hattie

(*Continued from page 31*)

for—and I thank you very much."

Too soon he replaced his hat and went on his graceful way. He gave, it is true, one glance toward the house. Harriette was glad that Sylvia was no longer on the veranda, for she was always poking her nose into things that did not concern her.

What a splendid beginning! An hour ago she and Foster had never heard of each other and yet they had already exchanged little gifts.

Other footsteps now sounded on the walk. This was Father coming home to lunch—her current dad, the title holder.

"Well, well, Hattie, working on the flower bed? Must be quite a surprise to the pansies."

The contrast was painful. Harriette dutifully accompanied this anticlimax into the house, but she felt that he cut a pretty sorry figure. He was all right in

Tones up the Gums *in a special way*

PYROZIDE POWDER contains special ingredients that give needed stimulation to gums that are easily irritated or are losing their healthy firmness. It is medicated with Dentinol, which promotes healing.

The effectiveness of this remedial dentifrice in allaying irritated gums has been demonstrated for years in dental clinics. Regular brushing with Pyrozide Powder cleans the teeth thoroughly—removes mucoid acid deposits and the daily secretion of salivary deposits (tartar). It aids in keeping the gums hard and firm.

In taste and action Pyrozide Powder is distinctive and different. The refreshed, cleanly feeling of your mouth for two or more hours after using will convince you that it is superior to any other dentifrice you have ever used.

A full six months' supply is in the economical dollar package. At all drug stores. The Dentinol & Pyrozide Co., Sole Distributors, 1480 Broadway, New York.

Quicker Results!

Only a Buescher Gives You All These Features

EASY to Play
EASY to Pay

Patented Snap-on Pads—the greatest improvement for beauty of tone—easy to replace—no more cementing. Found only on the Buescher.

Patented Automatic Octave Key—always positive.

Perfect scale accuracy—every tone always full, clear and true.

Hands never moved from one playing position.

Easier to play because of many exclusive improvements.

Convenient key arrangement, simplifies fingering of rapid passages.

BUESCHER *True Tone* Saxophone

John H. Niles, Musical Director, Palace Theater, Northfork, W. Va., wrote: "I have used nearly every make of Saxophone and never found one I enjoyed so much. The tone is true in every respect from the low Bb to high F, something I have never found in any other instrument. Also it has a wonderful action."

10 Evenings—One Hour Each

Quicker results are assured with a Buescher—you will be astonished at how easily it "comes" to you.

FREE—Saxophone Book

Illustrates all the various models, and contains pictures of many famous professionals, also first lesson chart. Send your name for copy. [463]

some ways; but she had hitched her wagon to a star.

When the toplofty young lady went forth to take the air that afternoon she did not travel alone but with a distinguished-looking gentleman. This invisible escort walked on the street side, as the cream of society always does, and she turned up to him a sweet daughtery face. Old Mr. Jennings, passing her thus, mistakenly thought that this uplifted smile was for him, and he was warmed to find her so cordial, after years of indifference.

As Harriette, homeward bound, passed the Jameson gate, her lopsided bearing was observed by one James Jameson, a boy of no importance, known in the vernacular as "Jim-Jams." Though these contemporaries were lifelong neighbors and classmates, nothing of a tender nature had ever existed between them. Mutual unpopularity was the keynote of their relations.

He thought her unbearably uppish and show-offy, and in one of those flashes of genius that come to the dullest of mortals, he had invented the epithet "High Hattie" to describe the *grande dame* next door. Harriette, on the other hand, regarded Jim-Jams as one of the lowest of the vertebrates, and often said as much, whether asked or not.

So absorbed was she today in the pally remarks of her hocus-pocus dad, that she did not observe this scoffer inside the fence consorting with a sinister little dog named Admiral. But now into her dreams came the hateful words:

"Wha's the matter of you, Hat? Have you got a pain in the neck, or what?"

Not by the faintest flicker did she indicate that anybody had spoken to her. She had that great gift.

"I bet it's a airyoplane." The fifth-rate actor ostentatiously looked at the sky.

Still no reply. Harriette was as one walking alone in a vast forest, studying bird life.

Jim-Jams now affected to believe that here was rare entertainment for man and beast.

"Looky there, Admiral. That there is a giraft. See what a long neck it's got."

"Odorous creature!" muttered Harriette to herself.

Inordinately proud of this poor little waggery, Jim-Jams gave an encore.

"Yes, sir, that a giraft. It's a stiff-necked giraft, that's what it is. They come from the jungles of Siberia."

A better epithet came to Harriette as she reached her own porch.

"Hoodlump!" exclaimed Harriette.

BEING an ardent lover of words, she characteristically turned to the dictionary for aid and inspiration. She was delighted to find that "foster," which had hitherto meant little in her life, signified "nourish, support, protect," and that a foster-father was one who did all these things, though not a genuine parent.

"He will be my foster-father," she happily reflected at bedtime. "All down through the flowing years." She intended to stay awake most of the night with this glorious idea. She was in that delicious state of mind in which charming words chased each other around. "Sunshine and moonshine and starshine." Her consciousness took a pleasant little joy-ride out through the cosmos. "Suns and moons and planets"—now a helpful phrase out of the schoolroom—"oblate spheroids." Something could be done with them. "And oblate spheroids gleaming through the gloom." With this remarkable thought the poetess knocked off work and called it a day.

She appeared the next morning in a simple but colorful gardening smock, and after her defective ancestor had gone to his humdrum fire insuring she put on a floppy hat and made known her purpose to take up horticulture in a serious way.

"The pansy bed is in a very neglectful state. I am going to work on it this morning."

"That's fine, dear!" exclaimed Mother, slightly puzzled but ever tactful.

The cynical Sylvia looked inquiringly at her little sister with those eyes which had often been highly spoken of by weak-minded idiots, but which Harriette had always thought overrated. Sylvia had an obnoxious way of seeing through the child's little pretenses; but this was obviously beyond her powers. She only realized that Harriette was gardening for the public eye.

"The hollyhocks by the back fence need attention too," she said tentatively.

This was an easy one for Harriette.

"Perhaps you can be doing the hollyhocks while I do the pansies."

SHE worked long at her self-appointed task, though one is glad to feel that she did not risk her health by over-exertion. Her newly invented foster-father did not seem to be in circulation and Harriette wondered at times whether weeding pansies was such a good idea after all. At last, however, he hove into sight. She bent close over her work, then looked up in glad surprise.

"Oh, it's the pansy girl!" Nature's nobleman bared his noble brow.

"Oh, good morning. It's Mr.—"

"Satterlee." The cream of society bowed slightly. "I have been told that your name is Deale."

"Harriette Stanford Deale."

"Happy to meet you. I hope we shall be great friends."

"Pals," said Harriette.

"Pals is right."

"And comrades."

"Comrades by all means. Likewise, sidekicks." His eyes strayed toward the veranda, as if wondering whether these philanderings had been observed. "Are you a large family, Miss Deale? Have you any brothers?"

"No, Mr. Satterlee. Nothing whatever but a sister."

"Well, sisters are nice, too."

"Some are, prehaps."

The great-hearted gentleman allowed his sidekick to put a pansy into his buttonhole, and went on his way, leaving a happy soul running loose among the oblate spheroids. "A clean-cut, red-blooded American manhood," Harriette decided on perhaps flimsy evidence. "What a noble father he will make for a young girl! . . . Odorous creature!"

The invective referred, of course, not to the vanishing cream of society but to the low vertebrate in the Jameson yard. It was impossible not to see how Jim-Jams had been carrying on. When Harriette was having her tête-à-tête with the glittering stranger, the hoodlump had died in

Mellin's Food
A Milk Modifier

The Baby's Food

The baby's food, sufficient for twenty-four hours, can be made in a few minutes by mixing together directed quantities of Mellin's Food, cow's milk and water. A very simple proceeding easily understood and readily followed.

The baby's food prepared in this manner is complete nourishment for every part of the body; thus assuring continuous growth and progressive development together with constant gain in weight.

The baby's food thus prepared is digestible nutriment for an infant of any age—no heavy, tough milk curds to disturb digestion for the curd of cow's milk is made soft, flaky and easily digested by the use of Mellin's Food as the milk modifier.

Mellin's Food Biscuits

Especially suitable when it becomes time to wean the baby from the bottle.

A sample tin sent free, postage paid, upon request.

Mellin's Food Co., 177 State St., Boston, Mass.

It's new, Different and Better

AT LAST a dressing which keeps the hair in place and *acts as a tonic too!* Your physician would recommend the new Glo-Co. It not only conditions the hair, but wars on dandruff too. Even its delightful fragrance is *new.* If you can't buy Glo-Co at your favorite drug store, department store or barber shop, send fifty cents for a full-size bottle to Glo-Co Company, 6511 McKinley Ave., Los Angeles, Calif. Same price in Canada, 10 McCaul Street, Toronto.

GLO-CO
LIQUID HAIR DRESSING
As necessary as the morning shave

horrible agony on the front lawn. Not sure that he had been observed, he had moved into a great open space and perished again, to the great delight of Admiral, who was easily pleased. Not for worlds would Harriette have admitted that she saw this burlesque show.

THE next day Jim-Jams was again scandalized by the exchange of amenities between Harriette and the summer resident—a talk during which their friendship ripened splendidly. After Foster Satterlee had departed, Jim-Jams accosted Harriette thus:

"What's the idea of you getting dippy about a fellow that is old enough to be your father? Are you a dumb Dora, or what?"

The poor zany meant no kindness. It was his innocent boyish purpose on this fragrant, sun-drenched June day to add his little mite to the sum of human unhappiness. He had met Harriette in many contests of satire and irony and his percentage of victories was low, but here was a situation to his liking.

"Is that any way to ask?" Thus the misguided Jim-Jams hastened happily to his doom. "You ought to get a stepladder when you talk to that ol' standpipe. When you talk up at him like that you look like his little girl."

Harriette seized his hand and pumped it with vigor:

"Thank you, James, you are very kindly."

The victim issued an astonished noise. Our beautiful language has no adequate word for this sound, yet it was in a way something like "whupff"—a sort of verbal blow-out. His weak little japperies withered and died. Harriette smiled sweetly, elevated her nose and sailed away, leaving him utterly deflated. He had fanned with the bases full. It was the sad, familiar story: Jim-Jams came in like Napoleon Bonaparte and went out like a fishworm.

The next morning found Harriette again at her bitter toil, but her heart was not in horticulture. Yesterday's sweet communion had been observed by the sharp-eyed and nose-poking Sylvia, and this conversation had ensued:

"Who was that sheik you were talking with today?"

"Which sheik?" Sparring for time, Harriette tried to create the illusion that she handled sheiks in wholesale lots.

"That nice-looking blond one with the ritzie clothes."

"Oh, that one. Why, his name, I believe, is Mr. Satterlee."

"What is he doing in Pequot?"

Harriette assumed her loftiest attitude.

"Prehaps he is spending his vacation here. My goodness, I haven't got time to find out what everybody is doing in Pequot, with all my garden work and all."

"Well, I *wondered!*"

"I know what she meant by that," thought Harriette. "She meant pansies."

Her love for those flowers, never ardent, was growing cold. The little talks with Foster were sweet, but the intervals were long and dreary. It was about time for him to lavish her with a few heart's desires; her foster-father ought to begin doing a little fostering.

The morning wore on and grew hotter. The wind blew dust in her eye and before

she got it out her eyes were tearful and, no doubt, red. She was tempted to drop floriculture and retire to some shadowish nook; but a happy thought struck her. If Foster could see her in this distressed state, he would take pity upon her and do something handsome. If he had no yacht or costly motor car, he might at least ask her down to the Red Cross Drug Store for an ice-cream soda.

So she stuck it out for another bitter half-hour; then came her bright reward.

"Well, hello, Pansy!" came the loved voice. "How is every little thing? Why, what's the matter? Don't tell me you're crying!"

The sympathy in his voice turned on the tears. She actually was crying.

"It's nothing much." She smiled bravely. "A little dirt in my eye prehaps."

"We must do something about that," said the red-blooded American manhood. He clasped her little hand in his. "I'll take you in to your mother, or somebody."

"Oh, no, that isn't necessary. I'll be all right."

"Come, Harriette, mind Papa." At any other time she would have been thrilled from head to foot by his whimsical phrase, but not now. There was nothing she wanted less than to expose Foster Satterlee to her home life; but this masterful man would not be denied. Every step up the graveled walk was, to her, two feet toward doom, and she could see with perfect clarity the hideous thing that was about to be.

"Don't you worry, old sidekick. We'll have you fixed up in a minute. Everything will be all—"

THEN it happened! The hall screen door flew open as if pushed by the hand of fate, and one accounted beautiful by addicts came running out, with a look of hypocritical concern in her large and effective eyes. To Harriette she seemed a trapdoor spider pouncing upon her prey.

"Miss Deale—isn't it?" Foster removed the flippant hat. "Your little sister seems to have something in her eye. I thought we'd better—"

"That's very kind of you."

Mother also appeared, and a ruinous division of labor now occurred—Mother took charge of Harriette and Sylvia took charge of nature's grand duke.

"Cast aside like a broken weed," murmured Harriette later in the enforced privacy of her own room, to which she was sentenced for a period of rest. "From the minute she got her tender hooks in him he forgot all about me." It was her hour of bitterest disillusion. "All men are like that," was her deliberate and original conclusion.

Harriette crept to the front window and looked out upon the formerly attractive lawn. The porch roof mercifully hid the occupants of the veranda from her lethal glance, but by listening carefully she could torture her ears with social voices rippling along as if there were no sorrow and suffering in the world.

"Gabble, gabble, gabble!" said Harriette maliciously.

On the afternoon of the tragedy she took her blighted life out Oak Street and showed it to Geraldine McIntyre. A more discerning person might have seen from the stricken face that Harriette was a mere hollow shell; but Gerry asked with ill-timed cheerfulness:

"Well, how are you and Fothter Thatterly getting along?"

Harriette seized her surprised friend by the wrist and said solemnly:

"Do me this favor, Gerry. Prehaps this is the last thing I'll ever ask of you. Never mention the name of Foster Satterlee again."

"Whath the matter with him?"

"He has proved unworthy of my daughtery love."

Harriette explained the matter in grim detail, she stage-managed her emotions skillfully and rattled her dead self with gusto. One not knowing that she was merely a picturesque ruin might have thought that Harriette was having rather a good time.

"Everything is all entirely clear now," she concluded. "He only scraped up an acraintance with me so he could meet Sylvia. He used me for a scrapegoat."

When the last bitter drop had been extracted from this story, Gerry was silent for a decent interval. Then she said:

"Wouldn't it be queer if—" With maidenly delicacy she left the hideous words unspoken.

"That would be more than my heart could bear," said the scrapegoat.

THE great river of time flowed on, and one Pequot day followed another, according to its incurable habit. Harriette's capacity for woe was limited and she gradually reverted to normalcy. Once more the pansies languished.

Jim-Jams lost his hunted look, the comfortable old relations were renewed and hymns of hate were exchanged over the party fence. Sylvia's nightly gathering of weak-minded idiots was enriched and enlivened by a colorful personality. Mrs. Rickhill made a belated call upon Mrs. Deale, and cleared up certain mysteries which had baffled Harriette's competent mother.

"Sam," Mrs. Deale said to her husband that night, "it seems that you have been under examination as a father by your younger daughter. Well, I'm sorry to say you flunked!"

"Hattie turned me down? I've sometimes suspected that I didn't give satisfaction. What's the matter with me, Catherine?"

She stated the main counts of the indictment as relayed—Harriette to Tillie to Mrs. Rickhill to Mrs. Deale. Much precious truth must have been lost in transit, but enough remained to convict Sam Deale of conduct unbecoming a father.

"You can't give up your business and change your name and grow more hair; but if you would try to be more like Foster Satterlee, you might be forgiven."

"Satterlee? Oh, that's the New York one with the dizzy neckwear. Has she a grand passion for him?"

"Well, baby grand I should say. You see, she adopted him as a kind of ideal father. She looked you over, and decided that she ought to carry a spare."

"How about you, Catherine?"

"Oh, I'm not thinking of making any change just at present."

"I mean, do you pass muster all right? I suppose you're a perfect mother."

Mrs. Deale elevated her nose in Harriette's best manner.

Bewildering!

How bewildering it must be for you, by merely looking at a hosiery advertisement, to know the quality of the hose itself.

The pretty girls who sit upon the printed page displaying soft, seductive curves—and the soft, seductive phrases setting forth the fetching beauty of the hose—these things just make it more bewildering to decide which hose to buy.

We believe that we have found the answer! We have priced an exquisite, fine gauge chiffon Iron Clad so low that you *can't* go wrong. Pure silk to the top, in the season's latest shades—4-ply mercerized heel and toe—double sole—new patented improved foot assuring perfect fit, smooth toe and non-wrinkle ankle—and with it an Iron Clad *guarantee* of satisfactory service or a brand new pair of hose—for *one dollar!*

14,000 dealers are selling Iron Clads. If your dealer can't supply you, send us your remittance of $1.00 a pair with a request for Style 810, and we'll mail your hose to you, paying the postage ourselves. State size desired (8 to 10½) and choose your favorite from these lovely shades: Atmosphere, skin, champagne, blonde, French nude, black, white, grain, parchment, sandust, Aloma, rose blush, peachbloom, moonlight, silver grey, mauve taupe, gun metal, white jade, honey beige, tawny and Kasha beige.

COOPER, WELLS & CO., 204 Vine Street, St. Joseph, Mich.

HARRIS TWEED. Very high class material. Suit-lengths by mail. Samples free. State shades desired.

"Perhaps not perfect. But I must say I've had no complaints from the customers."

"You must help me to lead a better life."

"All right, I'll reform you. I'll get it all out of her in time, and let you know."

"To tell the truth—I've always been a little afraid of Hattie."

"Harriette, Sam."

"I mean Harriette. I never understood her, the way I do Sylvia. I can always tell what Sylvia is thinking about."

"Can you, dear? What's she thinking about these days?"

"That's easy. Boys, clothes, tennis, swimming, motoring—"

"There you go flunking again! No; she's thinking about Foster Satterlee."

"Sylvia too? He seems to be doing well in our fam—" A look on his wife's face stopped him short. "You mean it's—serious?"

Mrs. Deale nodded wordlessly.

"Is he—good enough?"

"I don't know yet—he seems nice."

"How did she meet him?"

"Harriette found him in the street and dragged him in. I must add that he wasn't hard to drag."

Mr. Deale spoke lightly, but there was a serious undertone in his voice.

"If Harriette puts her 'O. K.' on him he must be pretty good. Believe me, that young lady is very, very choosy!"

IN THE following weeks Foster Satterlee became a familiar sight at the Deale home and he seemed to be winning his way with the other members of the family; but his discoverer remained haughty and aloof. Once in a while she tossed him a condescending smile, and that is more than she did for her sister.

Sylvia had committed grand larceny, and Harriette had decided to be bitter and unforgiving right on down through the flowing years. And all the time she could see the upraised hand of fate about to give her a terrible whack.

The blow fell upon a magic moonlit night in late August with the scented breezes stirring the white curtains of Harriette's little bedroom. Everything seemed beautiful in that light—even Sylvia seemed beautiful as she sat on her little sister's bed and told her story.

"I just had to wake you up and thank you," said this strangely sweet Sylvia, "because I owe all my happiness to you. You managed everything so beautifully from the beginning—all that pansy business and that day when you pretended to have something in your eye. You're a perfectly darling faker, and I love you."

With Sylvia's words and kisses all Harriette's bitterness vanished.

"I hope you and Foster will be very, very happy," she whispered. Before the imaginative girl fell asleep she had half convinced herself that she had executed this affair with great shrewdness.

The next morning Foster Satterlee appeared before the Deale mansion in a glittering and (by some standards) costly motor car. Upon seeing him, Harriette retreated to her room with a happy idea of presently coming down the stairway with queenly digilty to welcome Foster into the family.

It now occurred to her that she ought

Sensational New French Invention gives

A Perfect Marcel Wave

in 15 minutes — cost 2¢

Not a concoction from a bottle—not a sticky, messy lotion—not a "trick" brush—not a "magic" cap—not an antiquated "curling" device—not a "scientific" substitute for the old-fashioned kid curler. This amazing French invention is *positively guaranteed actually to marcel wave any head of hair in 15 minutes at a cost of less than 2c.*

By Mlle. Renee Duval

FROM Paris I have brought to American women the greatest beauty secret of all time. French hairdressers have guarded it jealously for many years. This secret will enhance the beauty of any woman's hair a hundred fold. And there is but one simple, easy thing to do. Now every American woman and girl can know, for the first time, the real and true secret of the French woman's always perfectly marcelled hair, a thing that has caused American women much amazement.

Simple to Use—Perfect in Results

It is so simple; a small, inexpensive, easy-to-use thing—the invention of a famous French hairdresser—it is called the Marcelwaver. I brought it to America—my friends here perfected it—then sent it to 1,000 American women to try for themselves. It gave such perfect results—proved of such great convenience—saved those who tried it so much money—that every one of these 1,000 women asked to keep it—and their friends sent me orders for thousands of Marcelwavers.

AGENTS!
Men and Women

Marcelwaver is taking American women by storm. Biggest earnings ever being made by agents everywhere. You must get in on ground floor before all territory is taken. Send—today—for complete information—all FREE!

This Secret Is Yours FREE!

Do not send me money—just your name and address on the coupon below. I will at once send you this secret—and a FREE copy of my famous book, "How to Marcel Wave Your Own Hair." Send today.

MARCELWAVER CO., Dept. 66-E Cincinnati, Ohio

MARCELWAVER CO., Dept. 66-E Cincinnati, O.

Please send me at once your precious secret of a perfect marcel wave in 15 minutes at a cost of less than 2c. Also a copy of your famous book—"How to Marcel Wave Your Own Hair." All this must be FREE to me.

Are You Going Away This Summer?

WHAT freckled noses—and sun-browned cheeks! A whole flock of happy laughing girls stepped off the train. And it seemed to me that any one of them could have won a beauty contest!

Long swims in the lake had done that—a week or two of living out in the country. Dancing in the moonlight, too, with lanterns strung among the trees.

Vacation time! Aren't you anxious to go this year?

Let us count up what you'll need to take along. Frocks—lovely, summery ones to put in your trunk. A hat or two—walking shoes and a pair of dancing slippers.

Earn the money for them now! There is a way—thousands of girls are doing just that. They have learned our fascinating secret—and in their leisure time, they are earning dollars and dollars of extra money.

We are all girls and women like you. So you can do it. You can be packing your trunks, too, in a few more weeks—and enjoying the happiest time you've ever had, by simply joining the Pin-Money Club, The American Magazine's money-making department.

WALK RIGHT IN OUR DOOR

THERE are no fees—I am eager to hear from you. And from you, too—you wives and mothers—for the work we do can be done right at home in your spare time.

Mrs. Harper of Pennsylvania earned enough last summer in the Club to treat the whole family to a trip into Canada with their car. Wasn't that the jolliest way to go traveling?

And this is a portion of a letter from a busy, fun-loving mother in the West:

> "This summer I've bought with my Club earnings gasoline and oil for trips to the beach—whole days of fun and freedom; many little luxuries like ice-cream treats and shows; and extra money to help meet the running expenses of a family of six."

MARRIED girls, school girls, even those who are tied at home with illness perhaps—are all welcome in our Club. This is the month to begin! Write me today, before you forget it. My address is

Margaret Clarke

Secretary, Pin Money Club
The American Magazine
Department U
250 Park Avenue New York City

to dress for this ceremony, and with incredible speed she donned a frock which had burst upon a delighted world at Gerry McIntyre's birthday party. Just as she became a lily of the field, Sylvia opened the door and looked in.

"How lovely!" exclaimed that reformed character. "Foster wants to speak to you."

A graceful young lady in white descended the stairway; at that moment she was less the poetess and more the actress. The duchess extended an elegant hand of greeting and said: "Good morning, Foster."

But he would have none of this cold formality.

"Little olc sidekick!" he cried. He gathered her up in his he-manly arms and gave her a loud, brotherly kiss.

"You're going out in the car with me today," he said in his masterly way. "Just you and I—no mother, no sister. We're going to start right now, and goodness knows when we'll be back!"

As the countess went down to the car on the arm of the grand duke, she observed an odorous creature leaning against a nearby tree and trying to advertise his existence by grimace and gesture. There was no sign of recognition in her haughty eyes; to her there was nothing whatever present but a tree. She wrapped the cloak of invisibility about the unlovely form of the hoodlump, Jim-Jams. It was a gift.

The history of that perfect day was told in glowing prose the following afternoon to a large and appreciative audience consisting of two authentic girls and a host of unseen admirers. She and her new brother had lunched lavishly at Chilton, fifty miles from home. At two-thirty they entered a movie palace in remote Fenway. At five they were in Milltown, where Foster threw off all restraint and lavished her with a four-dollar hat.

"I think thath abtholutely grand!" said the dentally deficient Gerry McIntyre.

Six o'clock found the precious pair pledging eternal palship and comradishness in a costly refreshment parlor in Smithville. Banana splits were consumed there, likewise chocolate sodas, éclairs, peanut brittle, and cherry pie.

At this point little Tillie Rickhill rubbed her stomach indelicately and said, "Oo!"

It was dark when they returned to Pequot having, it would seem, violated all the speed and dietary laws in New England.

"We're going to be sidekicks forever," said Harriette. "All down through the flowing years like a great river of time."

"If a perthon could have a father like that!" Gerry sighed.

"My father is doing better lately. He's lost one daughter, and prehaps he is afraid that will happen again. He treats me more respectively now."

"Well," said Tillie, "I thought it was kind of dumb to have that Satterlee for a father."

"I changed my mind about that." Harriette pointed her nose toward the far horizon like a camel. "I chose him to be the father of my future niece."

Sunrise

(*Continued from page 34*)

resentment against nature stirred in me. Why should there be tempests and blizzards?

Toward dawn I slept; and when I woke, golden light was streaming over my bed. Not a breath of wind was stirring. Dressing quickly, I went out into the grove of young white pines near my house. When I saw what I did, I was ashamed of my feeling during the storm of the night before. Here were the trees hanging, as Whittier beautifully says, "like crystal chandeliers," the snow and sleet on their brown branches softly taking fire in the calm sunrise. Here was breathless beauty, an innocence and a loveliness that shone with virtue. On no two kinds of trees did the snow cling the same way: the swarthy heavy-foliaged white pines bent to the ground with their burdens; the silvery branches of the birches were delicately ridged with fairy hills and valleys of snow; the shagbark hickories had caught and were wearing on their windward sides shining garments. The old rail fence that sagged down toward the frozen pasture had arrayed itself in ermine, tinged rosily where the level sunbeams glistened upon it. In the air was a delicious sense of relenting, the thrilling certainty of returning love. Sparkling gladness surrounded me, called into being by the wild storm. However grim the tempest, it passes, and peace ensues, a peace that is impressive because it follows war. After a storm, always a calm; after darkness, light; after the mournful shadows and the berserk wind, sunrise again—not only over the earth but also in the heart.

One night I slept among the sand dunes of a wild Southern sea island. I happened to be the only human being in that solitary beautiful wilderness. Deer roamed those tropical woods by hundreds; long lines of wild ducks sped veeringly into its Lethe-like streams; wild turkeys raked the pine straw under the huge yellow pines and fed ravenously upon the acorns of the live oaks.

The place was as perfectly wild as it had been before the days of Columbus. In such a place a man is likely to be keenly aware of all that is about him; yet I had expected to be impressed chiefly by the wild life. It was not so. A sunrise over the lonely ocean stirred me far more than the sight of huge stags, shockingly tame; monstrous pines literally draped with wild turkeys gone to roost; and incredibly placid ponds swarming with wild fowl.

The deep woods of the island marched down to the rolling dunes; beyond the dunes was a fine stretch of beach, tirelessly trampled by the Atlantic. In a hollow between the dunes I slept, rolled in a blanket. Over me blazed the stars, tremulous with beauty. What woke me was the morning flight of the mallards and the black ducks and the teal; with glad cries they left the lagoons of the island for a sunny day among the sea marshes. I lay looking at them in the pearly morning heavens; like them, what was I but a child of nature rejoicing in the return of day? Then I

Digitized by Google Original from UNIVERSITY OF IOWA

turned to face the sea and the sunrise.

The tide was flooding; and as the shoals before me extended for more than a mile, the playing of the white horses was spectral and spectacular. Tossed and snowy beauty, dimly illumined now, made the sea a visionary loveliness. The deep rose of the eastern sky turned scarlet, while long blushes of crimson stole softly to the heavens' high arch; a misty amethyst tinge came over the waters.

Now came the sun, its gorgeous shafts of fire reddening the rolling foam of ten thousand waves. Was there ever so gorgeous an arrival? The whole ocean was burning unconsumed before me, and upon the glossy shore there was not a shell that did not gleam and blossom with radiance. The sea and the sun! I gazed spellbound at these majestic forces, formed I know not by what amazing process of evolution; now harnessed, obedient—the sea keeping his bounds and the sun his destined course. The sea at sunrise! I searched my heart for words to express my feelings at sight of it. The words of the Shepherd King came to me, and they seemed adequate: "The sea is His, and He made it."

THEN there was that sunrise that I spent with old Asher, a hunter; a man of sinister reputation; something of a feudist; but in appearance a patriarch of his clan. Tall and full-bearded he was, with a craggy face bronzed by the outdoor life of seventy years. Renowned as a hunter, he was also a leader of the people of the woods; and as such he was frequently in personal encounters. He and I had long been friends; and when I met him at dawn on that fateful morning in Hell Hole Swamp, he and I naturally fell to talking. I asked him where he was going.

"I got to see a man," he said; and he said it in such a way as to promise no good to the man to be visited. I could see from his expression that the subject was a delicate one. As we stood on the old bank, with the wild greenwood awakening around us, I heard the joyous sweet call of the Carolina wren ringing with silver tones through the morning mist, and I called Asher's attention to it. Apparently, however, he was not interested. Then over us passed in gorgeous splendor a stately flight of snowy wood ibises, bound for the distant salt marshes. Both Asher and I watched them stream away over the lofty pines; and just as they were disappearing the first rays of the risen sun glinted refreshingly on their plumage. The tall beauty of the pines was soon flooded with light. Rapture was in the air, fragrance, serene joy, peace. We could not escape all this, Asher and I. But I did not realize its true effect upon him until, when we were about to part, I found him going my way. He said something about returning home. When we did part a half-hour later at his gateway he said:

"I'm glad I run into you this morning. If we hadn't stopped to talk, I might not have noticed the sunrise. But for that, I might have kilt a man. Don't it beat all how hard it is to be mean at sunrise, if you once stop to look at it?"

"Hard to be mean at sunrise." To me they are memorable words; and they came spontaneously yet thoughtfully from the depths of a heart deeply moved. But for a sunrise, Asher might have "kilt a man." It is one of those things that goes with me

1.—*Tufted Pro-phy-lac-tic*—Most dental arches are full-formed and require this type of brush.

2.—*Oval Pro-phy-lac-tic*—Scientifically designed for the small, more sharply oval arch.

3.—*Masso Pro-phy-lac-tic*—For dental arch that has tender gums. Massages as it cleans.

One of these three New Pro-phy-lac-tics exactly suits your dental arch. Let your mirror help you choose it.

All Different All New

for the first time Pro-phy-lac-tic designs tooth brushes to suit different types of dental arches

TEN seconds with your mirror . . . and you know exactly what tooth brush will do the most to help you gain gloriously white teeth, coral-firm gums.

Your mirror quickly reveals that your dental arch (teeth and gums) is one of three types. Yours, like most, may be full-formed as shown by a face and mouth of average size. It may be small, tending toward the oval. Or . . . still a third condition may prevail—that of teeth and gums that call for special brushing care.

Whatever type of arch you have, Pro-phy-lac-tic now makes a brush that exactly suits it . . . Tufted Pro-phy-lac-tic for the full-formed mouth and dental arch; Oval Pro-phy-lac-tic for the smaller, more sharply oval dental arch; Masso Pro-phy-lac-tic for teeth and gums that need health-renewing massage as well as cleansing action.

Give your teeth this chance

Look into your mirror. Decide what type of dental arch you have. Then buy the Pro-phy-lac-tic Brush that suits you best. Use it for several weeks. Then examine your teeth and gums again—if you want to see how much the right tooth brush can do to give you whiter, sounder teeth—firmer, healthier gums.

All Pro-phy-lac-tics are alike in one respect—their uniformly high quality. All have special bristles, transparent handles in new and beautiful colors, and are packed in individual packages delivered to you perfectly clean and sterile.

Pro-phy-lac-tic Brush Company, Florence, Mass.
Pro-phy-lac-tic Brush Co., Canada, Ltd., Montreal

Pro-phy-lac-tic Tooth Brushes

different in shape and size . . . alike in quality

_____

down the long years, giving reassurance, tinging the commonplace with the mystic bloom of wonder, suggesting to the heart that the pageants of nature always have in them spiritual power for us if we do not drive through life so fast that we are unwilling to give their silent splendor a chance to redeem our souls.

IT IS FUTILE to deny that human nature does not crave the sensational; but are we not shortsighted in imagining that in the brief and busy mortal span that is ours we are dependent solely upon ourselves and upon others like us to supply us with thrills? Besides, human performances can be gauged, can be imitated; many of the most spectacular are mere tricks. They utterly lack the superb aura of mystery that invests myriads of the masterful achievements of nature, which are the achievements of God. If we love thrills are we not missing inimitable chances if we fail to perceive many of those spectacular pageants staged by nature? For poetic beauty what scene presented by man can compare with a sea moon setting beyond white-rolling waves? What form of entertainment can man devise more splendid, more satisfying than a gorgeous sunrise in a mountain land? I especially remember a great pageant that I watched near Mount Mitchell, the loftiest crest in America east of the Rockies.

One of my harmless pastimes is searching for Indian arrowheads; and on this particular morning I had gone down an old mountain trail to investigate a reputed ancient Indian camp site, high on a flat-topped hill overlooking a wild gorge. I found the hill top to be an old pasture, so grown to heavy grass that I knew my search for relics would be vain. But my trip was not, for I met little Ben Lance, a mountain boy who had just driven his cows into that wild mountain pasture. He was shy but friendly; a lad only ten years old, yet he had about him an air of sturdy manliness and independence; a shy friendliness that immediately won my heart. I asked him his name, and he told me not only that but also much about his life in the mountains. He came of ancient English stock, though he did not know it; his manner betrayed a long inheritance; he had an aristocracy of manner that only one who is truly democratic of heart can assume. As we sat together on a gray boulder, facing Mount Mitchell, the awful and sublime rose of sunrise began to bloom for us behind the shoulder of that mighty mountain, momentous and huge and black against the eastern sky.

"Ben," I said to my small companion, "you often see the sunrise from this pasture, don't you?"

"I calculate," he said, with his quaint drawl, "that she will be here just the same time I is. I is late sometimes, but the sunrise she ain't never late. I guess that's because God manages that."

I pondered the child's words as we looked together at the flaming waves of heliotrope that were fringing the mountain crest. Every tree on the skyline of those tremendous slopes stood out vividly; dark lay the valleys beneath.

"What do you know about God, Ben?"

He looked at me with clear, intelligent eyes.

"I know He made everything," he said; "and He watches how we behave. I like to be here when the sun comes up," he went on; "it makes me feel how great God is, and then I ain't skeered of nothing."

Childish ramblings, some would call them; yet to me they brought a heartening message. Here was a lonely little lad who felt God in the sunrise; who knew in his own way the meaning of communion. Ben Lance had learned by himself the most interesting thing that all nature has to teach us: that God is close to us, is all-powerful, is loving. He learned it from the sunrise.

BUT all the beauty and all the wonder of the dawn would mean little if they did not infallibly suggest to the heart a spiritual dawn beyond our mortal night. In all the vast realm of human concern, nothing has any real importance beside the question of personal immortality. If this one immortal hope of man is vain, all other fulfilled hopes are well-nigh futile. Our trust in immortality is our chief bond to God; without immortality, our claim of divinity in our natures is both ludicrous and pathetic. But we feel that we are true children of God. Being primal and native, man's instincts are commonly right; and he has had, in all times and in all lands, the instinct for immortality. He believes that he shall survive the dark passage of the misty river of death. Nor, even to the most practical mind, need this survival seem incredible; for through what varying forms has a man not passed during his few years on earth! Conceived mysteriously, borne about by his mother in palpable darkness; living as an innocent and happy child; then as a youth, then as a man, then as an old man. He has been many persons, yet one person; and always in him, to distinguish him from the brute creation, he has felt the divine fire, the far kinship to the celestial.

Sunrise suggests to me not only the power of God grandly to continue what He has begun but it also conveys the reassurance of the Creator's love returning to us daily, bringing joy and forgiveness; and to any reflective heart it intimates that no night is final; for, since with God all things are possible, His almighty love has, I confidently believe, prepared for us a radiant future beyond the sundown of death. And if we meditate but momentarily upon what He has done and upon what He does do, confidence in immortality is natural, reasonable, and, to my way of believing, to be counted upon as infallibly as the sunrise.

ONCE IN A WHILE a man arises who is so bewilderingly facile that he's a whole host unto himself. Such a man is Chase Salmon Osborn, about whom you will read next month. Born and bred in poverty, he became the governor of Michigan after vicissitudes, exploits, and adventures which put the dime novel in the shade. His "nose" for iron led him to discover great iron deposits; his love of adventure led him into Central Africa, Madagascar, and the Andes; his love for humankind led him to give back the vast wealth he had collected, keeping for himself only enough to live on. An amazing man, who can talk on any subject and is an authority on many.

Gold is Where You Find It

(*Continued from page 41*)

about . . . about the boys behind the mills."

And he told her, with sparkling humor clothing the stark tragedies of his childhood; and after he had gone that night she stood for long in the middle of her tranquil room, trying to determine why her pulse was quick. That terrible, drab, cruel background! But sympathy for it, alone, would not move her so.

After a time she commenced to wonder if he had been playing a trick on her. He had spoken no word of love, made no familiar gesture.

The first break in his attitude came in September.

"How long," he asked, as he pulled off his overcoat, "does a man know a girl of your sort before he calls her Janet?"

"I haven't the least idea, Marc," she said, and he rubbed his palms boyishly.

Later: "We seem to get along. I don't bore you, or you wouldn't keep asking me back. Sometimes I wish you'd quit your job. A girl like you doesn't like to go to places with her employer, and there are so many things to do—"

"Don't be silly!" she interrupted.

"I know a place," he said, "away out; an old, old inn, where the food is surpassing fine. And now, with the forests beyond town all gaudy. . . . Sunday, for dinner?"

They sat in the beamed room by a lazy open fire, alone, and he made love to her across the table.

"SOMEHOW I knew, from the moment you walked into my office that I was going to love you," he said, so quietly. "But there were complications. I wanted, first, to find out about your sort. Then I wanted to see you outside the job, so I could find out about you. . . . How could I? But you played up. . . . That's part of being your sort, isn't it?"

She sat very still, though she thought her heart would rock her.

"You made yourself easy to know. You made it easy for me to tell you about myself. You have . . . poise, and assurance. All my life I've wanted to be sure of myself, like that. All my life I've been wanting the love, the understanding, the companionship of a woman. I know, now, I've been wanting your kind. I've known for months, that I wanted just you!"

He was so gentle now!

"You don't say anything," he breathed, after the pause, and she saw him fight back misgiving.

"I have nothing to say. I . . . I don't know what *I* want, Marc."

"You have had your chance at all the obvious things—position, devotion, courage. What is it, Janet, besides these?"

She averted her face, because the intensity of his want hurt her, knowing, as she did, that she could not satisfy it.

"I don't know, I tell you!" Her low cry was almost fright. "Don't think I fail to appreciate; don't feel I'm cold and hard! Oh," she threw out a pleading hand. "Stability! It's what we both want,

For beautiful walls and ceilings *decorate with* Mello-Gloss

and eliminate the heavy expense of frequent decorating

HERE is a paint that fairly transforms your rooms! Lowe Brothers Mello-Gloss. It makes your walls and ceilings *a part* of your decorative scheme. It makes them more complementary to your drapes and hangings. More effective as a background for your furniture.

And this paint is so remarkably serviceable and lasting. Walls and ceilings that are finished with Mello-Gloss can be *kept* clean merely by using soap and water or Lowe Brothers Cleaner. They can be cleaned five or six times, and each time look like new. This means that by finishing with Mello-Gloss, your first cost constitutes your entire decorating expense for years.

Before you choose your decorating materials, see The Lowe Brothers Dealer. Let him tell you about Mello-Gloss, which has slight luster; or about Mellotone if you prefer a *flat* finish, one without luster.

Be sure to get a copy of "The Art of Color in the Home." This unusual booklet contains valuable information and expert advice on home decoration. It is profusely illustrated in color and can be obtained free from any Lowe Brothers dealer or mailed from Dayton direct to your home for 10c in stamps.

"He saves $100 a month"

"SEE that man at the receiving teller's window? That's 'Billy' King, Sales Manager for The Browning Company. Every month he comes in and adds $100 to his savings account.

"Three years ago he started at Browning's at $25 a week. Married, had one child, couldn't save a cent. One day he came in here desperate—wanted to borrow a hundred dollars—wife was sick.

"I said, 'Billy, I'm going to give you something worth more than a loan—some good advice—and if you'll follow it I'll let you have the hundred too. Take up a course with the International Correspondence Schools and put in some of your evenings getting special training. The schools will do wonders for you, I know. We've got several I. C. S. men right here in the bank.'

"That very night Billy wrote to Scranton, and a few days later he had started studying at home. Why, in a few months he had doubled his salary! Next thing I knew he was put in charge of his department and two months ago they made him Sales Manager. It just shows what a man can do in a little spare time."

* * *

Employers are begging for men with ambition—men who really want to get ahead in the world and are willing to prove it by training themselves in spare time to do some one thing well.

Prove that you are that kind of man! The International Correspondence Schools are ready and anxious to help you prepare for something better if you will only make the start. Do it now! At least find out what the I. C. S. can do for you.

Marc, so badly. . . . But what in a man gives a girl like me promise of it?"

They drove silently into town through the dusk, and he walked up the one flight to her apartment.

"Don't you know now?" he pleaded.

Her eyes were closed in suffering.

"I'm . . . I'm all confused. Sometimes, it seems as though I'll *never* be sure."

And so until winter they went about, self-conscious, now, in each other's presence. He came to see her again, but a barrier was between them because his desire was so intense, her search for the quality she demanded so futile. She saw him plunge into his work, as though to bury misgivings; saw him fight fearlessly, gloriously, through the paving scandal; saw circulation mount; saw, with the clarity of a moving pencil, the situation screw up and up to the making point, which was so dangerously near the breaking point.

Oh, he wanted so much to have his paper! He grew gaunt with the struggle, and his eyes did not smile.

JANUARY the fifteenth. That was the date he had set for himself. On that day new advertising contracts would go into effect, with volume enough to make the showing his impatient creditors demanded. But a single doubt in the minds of one of these would spell ruin. They must stay with him, all of them, through this final phase of his fight.

"I want to see Mr. Howell."

Janet looked up to see a bland man before her desk.

"Yes? And who, please, is calling?"

"Mr. Baxter, H. H. Baxter."

This was Baxter, then, of Baxter and Rudyard, who had made and lost a fortune in real estate, and were rumored to be on the point of making another.

Wearily Howell received her message. "All right."

"Go right in, Mr. Baxter."

Mr. Baxter went right in. He closed the door behind him, holding the knob to seat the latch securely. But that latch needed attention, like other equipment about the office. It held a moment, but the slight jar of the man's steps as he crossed to a chair loosened it. The door swung open an inch, letting their voices out.

The exchange of preliminaries, with a tinge of dislike in Howell's tone.

"Got a story I thought would interest you." Pause. Howell made no response, forcing this caller to state his errand. Baxter cleared his throat:

"Traction company's going to make an extension through the Fern Run district. That ought to be of interest, Howell."

Another pause. Then: "How can United Traction make such an improvement? Man, they can't even keep up the extensions required by their franchise. I happen to know what shape they're in."

"Well, I'm telling you they will. The other papers will say so."

"I'll have one of the boys see them."

Janet heard Baxter move in his chair.

"Chances are, they'll deny it."

"So? That settles it for us, then."

"The other papers don't feel that way." Then: "Look here, Howell, Mr. Chapman'll appreciate this."

Chapman! Janet knew Chapman, a director and chairman of the discount committee of Security Savings, where a past-due loan was being carried until the fifteenth. Chapman had sent disagreeable messages to the publisher of the "Express." She knew his attitude had been, and still was, a harrying factor.

"I'd be glad to please Chapman . . . some way. But I can't do this."

Then, in a tone she knew he used only when his darkest suspicions were aroused:

"You're interested in Fern Run, Baxter. Got a big subdivision out there, haven't you?"

"To be frank, we have. That's why I'm here."

"Car line means a lot, eh?"

"Naturally."

"Matter of fact, according to gossip, you fellows are out on a limb again. If you could move Fern Run, it'd put you in the clear?"

"No, to the first; yes, with qualifications, to the second."

"And haven't I heard that you've just formed a new corporation to take this tract over, and are peddling the stock upstate?"

"I didn't come in to discuss our affairs."

But Howell interrupted, voice rising:

"What's the racket, Baxter? You want us to be the goat on a fake story, so you can unload on some suckers?"

"You're going pretty far, Howell!"

Both men were on their feet.

"I came here to give you a tip on a story; and, if you must know it, Chapman told me to tell you he wanted it published."

Howell's hand smacked down on the desk.

"You can't play me for a crook!"

The silence was thunderous. Then Baxter cleared his throat and laughed.

"All right, Howell; I'll come clean. This extension will be built . . . sometime. All we need is this one thing to close our deal. They can't lose in the end. They may wait a little but—"

"But you can't save your own skins without a lie, eh?"

"Steady, now!" He was trying to be conciliatory. "Chapman is in to his ears with us. If we don't swing this, we smash. If we go, he loses a hundred thousand, flat! He told me to tell you to print this story, and he added this for me; not for you, just for me: That if you don't print it, he'll see that your connection with the 'Express' is a joke by noon tomorrow, when the Security Savings Board meets. Now"—savagely—"do you believe *that?*"

WHEN Howell spoke—after a long, long interval—his voice was hard and rough as it used to be, probably, after shouting his papers all day long in a raw wind.

"Yes, Baxter, I believe that. Chapman swings the board; he'll have no charity. He's got me down—and he'll strike.

"But I've a message to charge you with for Chapman: Tell him that *until* my connection with this paper is a joke, I'm impelled to use behind-the-mills methods on any man who makes such a proposal to me. There, sir, is the way out!"

Janet could see him, as Baxter stormed through the doorway, with his finger still leveled at the exit of the little office where he had dreamed his dreams and fought his fight. She was in full view, but he did not see her. Slowly he lowered his hand, and then sat down in his chair and picked up a proof that lay on his desk.

Digitized by Google Original from UNIVERSITY OF IOWA

Though she watched for a long time he sat there holding that piece of paper, not reading, scarcely breathing, it seemed; in the attitude of work, but not working. Simply staring into the ruin of his hopes. . . .

She did not speak; one, with a sense of the fitness of things, does not speak to another in a moment like that. She walked home, cold and frightened. She was restless that evening. She wanted to telephone Marc and call him to her, but did not. What could she say? Or do? She did not sleep until late, and when she did it was to dream of a man stricken.

Howell betrayed nothing the next forenoon. At twelve a telephone call came for him.

"Mr. Chapman is calling," she said, standing in the doorway.

"Oh, yes," almost gruffly. "Tell him I am coming down."

He left at once. He was gone until the last rumble of the presses had died. When he returned, he walked briskly. He smiled at Janet as he passed her desk, and she heard him opening and closing drawers in his office.

A half-hour of this. Then: "Oh, Janet?"

THE place was very still as she entered. He had piles of books and papers about, was tying one bundle with cord, and did not look up.

"I'm awfully sorry; but I'm not sure they will want you here after today."

"They?" she echoed.

"Yes, you see, someone from Security Savings will be here in the morning. I've —I couldn't quite make a go of it."

He looked up at her then, and smiled, and there was no pain in his eyes. His face was serene. He was beaten; but he had fought the fight and kept the faith.

"I'm so sorry," he said again. "You've done remarkably well. If you want, I shall tell them—"

Her nails were biting her palms. Her heart was pelting its chamber. She was living again those moments when her father came home, smiling through his ruin.

"Marc!" Her voice was shrill, so shrill that it startled her. "Marc Howell!" He stood erect, sharply. "Marc, it's gone? . . . the 'Express'? But I'm here, Marc! . . . I'm waiting . . . with all the love . . . all the faith . . . the belief and faith—"

He had her by the arms, he was shaking her, and his face frightened her, it was so savage.

"Look here!" he choked. "Is this . . . because I'm busted?"

"No! No! No!"

"If it isn't sympathy— What is it makes you love me, now?"

His look was so intense that she drew back. It seemed as though his whole life hung on her answer.

"I don't know, Marc. I . . . I love you." He trembled so! "I—" She brushed her eyes and looked up into his face with a glorious smile. "It's been so silly. It's such a common word . . . for such a precious thing—nobility!"

"I'm not noble; I'm just a kid from behind the mills, remember!"

"Gold," she said, as she drew him close, "is where you find it!"

Bad Breath! Tired Digestion! Constipation!

—frequent signs of "intestinal toxicity"

WE ALL know them, those dreadful days. With head throbbing dully—a mouth like . . . (you know the idiom)—and no appetite for even the most tempting food! Hateful days that seem to last forever!

We should take such days seriously. For the things we experience then are usually Nature's danger signals—warnings of intestinal toxicity.

Ordinarily it's simply a case of eating and drinking too much . . . and too much, too often! But it is not a condition to be neglected—nor one to be dismissed by the indiscriminate use of a pill or two. The consequences may be far too serious.

In combating intestinal toxicity, thousands of people every day are discovering in ENO's Effervescent Saline exactly the assistance they needed. Unlike drastic, bitter cathartics, its gentle, thorough action is never a shock to the system. Instead it is a delightful, easy, refreshing laxative that never gripes nor interferes with your daily routine.

Its alkaline reaction tends to sweeten your stomach and clear your head. It is pleasant to take, not harsh nor drastic —simply speeding up normal action.

There's no excuse for bad breath, which frequently is caused by poisons taken up by the blood and eliminated through the lungs. . . . Reasonable care in diet, including plenty of fresh vegetables and fruits . . . normal daily exercise . . . quantities of water . . . and ENO's regularly should keep you fit and feeling like a million.

Try ENO's tomorrow morning and see for yourself. This famous effervescent saline has been the standard the world over for over half a century. Your druggist has ENO's at 75c and $1.25 a bottle.

Prepared only by J. C. Eno, Ltd., London, England. Sales Agents: Harold F. Ritchie & Co., Inc., Belmont Building, Madison Avenue at 34th Street, New York.

ENO — health precaution—will cost you less than 3c a day.

When you get up, simply take a glass of water and add a generous teaspoonful of ENO. *Taking this sparkling, delightful saline regularly will help to keep you fit throughout the hardest day.*

For a business headache, nothing is better than a glass of ENO. *Try it, at the better soda fountains everywhere.*

Other People's Children, Dogs, and Radios

(*Continued from page 57*)

twitching, his ears and nose quivering. I do not tell myself nor my friends that he is dreaming of angels or of heaven. I do not presume to do this. Only he and his Maker know what he thinks. That is one reason I respect him so much—too much to interpret his actions to suit my own whim or my love of exaggeration.

So much for other people's dogs.

When I begin with other people's radios I may as well admit that I am touching on a subject of which, technically, I know absolutely nothing. Yet some of us are able to say most about that of which we know least.

As I have already confessed, I have never owned a radio. I will go further and say that I have never even manipulated one—turned it on, adjusted it, started it, or whatever the term is that one uses with regard to this wonderful invention. Nor have I ever lived in a house with one. But I have visited and made calls in the same house with a radio.

Right here I pause to give vent to a truthful statement. I consider the radio one of the greatest of blessings to many persons. It is a mental—perhaps spiritual—life-saver to millions. If I were living in the country, or were lonely, or had many leisure hours on my hands, I would rejoice at the radio as one that findeth great spoil.

But—that does not mean that I want to listen to the radio upon *all* occasions. Nor does it mean that I do not at times resent my neighbors' radios.

I am not complaining that I have a close neighbor whose radio brings to my ears things that disturb me when I am trying to work. I believe there are radios in the apartment house in which I live for a part of the year. They do not annoy me. In the winter when doors and windows are closed I do not hear them. In summer I go where I am sufficiently isolated to have the delicious peace for which I long. No, the radio that I resent is that which someone insists on turning on at the wrong time.

FOR instance: Some months ago a woman asked me to set a time when I would spend an hour with her grandmother.

"Grandmama gets out very little," she implored, "and she is lonely. She is really hurt that you call on her so seldom."

It so chanced that I was more than usually busy at that time. However, I did not say so, but asked if she would like me to come the following Sunday afternoon. She said she would, and I did not tell her that I was going to break another engagement in order to call on her grandmother, of whom, by the way, I am very fond. Promptly at the hour set I presented myself at her door. The brother of the granddaughter admitted me.

"Good afternoon!" he said. "Won't you come right in? We are just listening to the services at the Y. M. C. A."

I followed him into the living-room, keeping step to "Onward, Christian Soldiers," the strains of which were blaring forth from a loud speaker. They were silenced long enough for me to greet my hostesses—the grandmother and granddaughter. Then the younger woman made the statement that her brother had made.

"Yes," the grandmother supplemented, "and Rev. Dr. Blank is speaking at the Y. M. C. A. this afternoon. He is really remarkable. But if you would rather talk, we'll shut the radio off."

What could I say—being an ordinarily courteous and kindly person? Of course I disclaimed any desire to interfere with her listening to Doctor Blank's discourse. She smiled her pleasure, as did her young companions, and again the radio was started. For forty-five minutes the Rev. Dr. Blank held forth in sonorous periods. Then there were some more hymns. By that time my hour was up. I was expecting friends to dinner and had to go home to give a new servant some instructions. I rose to my feet.

"Oh!" my hosts demurred; "are you going already?"

"I must," I said; "I am expecting friends to dinner."

"I am disappointed," the dear old lady remarked reproachfully. "I have been looking forward to a nice talk with you, and here you are going away without my having a chance for even a brief chat."

I did not remind her that that chance had been overlooked. Nor am I claiming that my conversation would have been more interesting than the preacher at the Y. M. C. A. All I claim is that when people want to listen to their radios they should not urge busy mortals to come to *talk* to them.

A FEW weeks ago I was dining with a friend whose husband is a radio fan. At least six times during the after-dinner conversation the husband interrupted us when we were in the midst of most interesting discussions, to ask us to listen in on this or that speaker or entertainer. Once someone in Washington was delivering an interminable speech in a raucous voice. This proved unacceptable to our host, so we guests were allowed to continue our discussions until the speech was over. Then we were urged to "listen to this," which proved to be some dinner music at one of the hotels. Later, a really charming talker was cut off in the middle of a delightful discourse because friend husband wanted to get some particular orchestra. Connected conversation became so difficult that at last we gave up in despair.

When I left, one of the men escorted me to my taxi. He was so grave that I looked at him inquiringly.

"What are you thinking?" I demanded.

"That I would like to teach radio owners a code of ethics!" he exploded.

I laughed with conscious relief. My companion was uttering a sentiment that had smoldered within me for the past two hours.

And, anyway, what hostess would forgive one for saying what one thought of other people's children, dogs, and obtrusive radios?

Sunset Pass

(*Continued from page 63*)

"Well, Rock, I had hard luck. Two bad years for water and grass. Then Dabb shut down on me. I held the little end of a deal with him. Next, I sold some cattle, put the money in a bank, an' it busted. Then Preston moved into the country—an' here I am."

"How in thunder did you get *here*?" demanded Rock bluntly.

"Right off I made a mistake," returned Slagle, nodding his head. "Preston was keen about my ranch in the Pass. He made me a good offer. I refused. He kept after me. I had some hard words with his son, Ash, an' it all led to a breach. They kept edgin' my stock down out of the Pass, an' I didn't have the riders to drive it back. That way, then, an' in others, I fell more in debt. No banks would give me credit. I had finally to sell for about nothin'."

"To Preston?"

"Sure. No one on the lower range would take it as a gift. It was a poor location, if any other outfit rode the Pass."

"Ahuh! Then, as it stands, Preston about ruined you?"

"No, Rock, I couldn't claim that. My deal with Dabb hurt me most—started me down-hill. Gage Preston never did me any dirt that I actually know. When I went to him an' told him his outfit was drivin' my stock off grass an' water, he raised the very Old Ned with his sons, in particular Ash Preston, who's sure rotten enough to taint the whole other twelve Prestons."

"So this Ash Preston *is* rotten?" queried Rock, deliberately, glad to find one man not afraid to voice his convictions.

"ROCK, I don't talk behind any cattleman's back. I told Gage Preston this, an' I told Ash to his face."

"Then what happened?"

"Well, the old man stalled off a shootin' match, I reckon."

"Have you ever met since?"

"Lots of times. But I've never had the nerve to draw on Ash. I know he'd kill me. He knows it, too."

"What you mean by rotten?"

"Mebbe it's a poor word. But I know what I mean. Did you ever see a slick, cold, shiny rattlesnake, just after sheddin' his skin, come slippin' out, no more afraid of you than hell, sure of himself, an' ready to sting you deep? Well, that's Ash Preston."

"Ahuh! And that's all you mean?"

"Reckon it is, Rock. I've lost cattle the last five years, some hundreds in all. But so has Preston, an' other ranchers, all the way from Red Butte to the sand. There's rustlin', more perhaps than when you helped us clean out the Hartwell outfit. But, sore as I am, I never laid any of it to Ash Preston."

"I see," rejoined Rock, studying the other's masklike face. "Glad to get your angle. I'm goin' to ask Preston for a job."

"I had a hunch you were. I'm wishin' you luck."

"Walk out with me and see my horse, Jess," rejoined Rock, turning. . . . "Do you aim to hang on here?"

"Were You *Born* a Money-Maker?"

Other Men Are Cashing In On That Simple Secret—So Can You!

"I'M going to let you in on a little secret, Tom. It cost me ten years to discover it, but if you can use it—and you can—you're welcome to it.

"When I was your age, I was always wondering why the boss never seemed to take much interest in me—why, for instance, when he needed a new department head he would always pick the other fellow. Oh, I got a little 'raise' now and then—maybe an extra five a week, every year or two—but the jobs that paid real money always went to someone else.

"Then two things happened—

"First, Bob Harris was promoted to Chief Accountant—salary $6,500. I knew Bob didn't have any more natural ability than I had—yet the fact remained that he got the place. And I had to admit that he was better able to swing it!

"On top of that, Bert Winslow, who hadn't been with our organization half so long as I, was stepped up to General Sales Manager—salary $8,000.

"Well, I took myself aside, and for the first time in my life I looked the situation squarely in the face. That night I clipped and mailed a LaSalle coupon.

"First thing I knew, a vacancy occurred—not the *big* job yet, but a job much bigger than the one I had been filling. I landed it—made good—then got a better job—and a better one yet—

"I told you I was going to let you in on a little secret. Well—the secret is this: Always try to give a little more than you are paid for! ***And in order to give more, first get more to give!"***

Are you disappointed with that simple secret? You needn't be.

It was no other than that simple secret—backed and reinforced by LaSalle training—that took H. A. Nelson from a New York dock (where he landed from Holland in 1917, unable to speak a word of English) and lifted him to the general managership of the Chemical Supply Company of Cleveland, Ohio.

It was that same little secret—supported by LaSalle training—that lifted E. J. Dryden, of Laredo, Texas, from a clerkship at $150 a month to the position of Auditor of a big wholesale house, where today his earnings are better than $11,000 a year.

It was that same simple secret—brought to its full power by LaSalle training—that advanced C. R. Stowell, $50-a-week salesman, to the position of Sales Manager of the Clear Lake Beach Company, Los Angeles, Calif., and to a yearly income of $30,000.

Send for These Free Books—They Tell You How

You want to make more money—you're set on that. You want to make it as soon as possible—with the least lost effort.

Then there's one thing you should do immediately—you should send to LaSalle Extension University and find out how you can turn that secret into cash.

Face your problem—decide the field in which you want to make a big success—then fill in, clip and mail the coupon NOW.

We Guarantee Your Dog Will Eat Sergeant's Dog Food

It is not only natural that the makers of Sergeant's Dog Medicines should make a Dog Food, but it is equally natural that they should make the best dog food on the market. For more than fifty years the Polk Miller Products Corporation has been seriously studying dogs and their diseases. We have learned that a large part of dog ailments are caused by improper feeding. Long experience has taught us what dogs should be fed.

A Complete Ration

Sergeant's Dog Food contains clean, freshly cooked beef and whole wheat flour, together with other ingredients mixed in just the right proportions. A dog can live and thrive on Sergeant's Dog Food and water.

Keep Your Dog in "Show Form"

Sergeant's Dog Food produces bone and muscle. It makes for lots of pep and vitality. Your dog's teeth will last longer. His digestion will be better. He will have a glossier, healthier coat. Ideal for puppies after weaning.

Famous Dog Book Free

We urge you to write for a free copy of Polk Miller's famous Dog Book. It contains the accumulated experience of fifty years. In clear, non-technical language it tells the symptoms of dog diseases and the best treatment for each. There are useful articles on feeding, breeding and rearing dogs. This book has been the guide for millions of dog lovers. It has saved the lives of untold thousands of valuable animals. It is free.

Expert Advice Free

If your dog develops a condition not fully explained in the Dog Book, *write us at once.* State age, breed, sex and all symptoms. Our expert veterinarian will answer personally, sending, without charge, complete instructions for care and treatment. Sergeant's Dog Medicines, standard for over fifty years, are on sale at dealers everywhere. If you cannot obtain them, write direct. Address Polk Miller Products Corp., 1569 W. Broad St., Richmond, Va.

Write for a Free Sample of Sergeant's Dog Food

Sergeant's
DOG MEDICINES
"A medicine for every dog ailment"

"Thank heaven, I don't," replied Slagle, with a first show of feeling. "My wife—she's my second wife, by the way—has had a little money an' a farm left her, in Missouri. We're leavin' before winter sets in."

"Glad to hear you've had a windfall, Jess. . . . Now, what do you think of that white horse?"

ROCK had been two hours leisurely climbing the imperceptible slope up to the mouth of Sunset Pass. It was mid-afternoon. The clouds had broken somewhat and already there were tinges of gold and purple against the blue sky.

At last he entered the wide portal of the Pass, and had clear view of its magnificent reach and bold, wild beauty. The winding Sunset Creek came down like a broken ribbon, bright here, and dark there, to crawl at last into a gorge on Rock's left. The sentinel pines seemed to greet him.

They stood as he remembered, first one, isolated and stately, then another, and next two, and again one, and so on that way until at the height of the Pass, they grew in numbers, yet apart, lording it over the few cedars on the level bench, and the log cabins, strange to Rock, that he knew must be the home of the Prestons.

Many and many a time had he camped there, realizing and loving the beauty of that lovely aloof spot, yet never had he imagined it as a site for a ranch. But it was indeed the most perfect situation of any he had ever seen. And it was Thiry Preston's home.

Slowly Rock rode up and entered the beautiful open park. The road cut through the center and went down the other side. Rock had a glimpse of gardens, corrals, fields, and then the purple pass threaded with winding white.

There were no rocks, no brush, no fallen logs or dead timber. The few cedars, and piñons and pines stood far apart, as if distributed by a mighty landscape artist. Some of the cabins were weathered and gray, with moss green on the split shingles. They had wide eaves and sturdy gray chimneys built outside, and glass windows.

Other cabins were new, especially a little one, far over under the overhanging green slope and near a thin line of white water falling from a mossy rock. The largest of the pines marked this little cabin, and towered over it protectingly.

Just then a hound bayed, deep and hollow, no doubt announcing the advent of a stranger in the Pass. Rock, having come abreast of the first cabin, halted his horse.

The door of this cabin opened. A tall belted and booted man stalked out, leisurely, his eaglelike head bare, his yellow hair waving in the wind—Ash Preston.

Rock felt that seldom indeed had he been looked over as he now was by this Ash Preston. No hint of recognition in that live blue gaze!

"Howdy, stranger. Off the trail?"

The omission of the invariable Western "get down and come in," was not lost on Rock.

"Howdy to you," he returned. "Is this Gage Preston's ranch?"

"Yes."

"Then I'm on the right track. I want to see him."

"Who're you, stranger?"

"I'm Trueman Rock, late of Texas."

"Rock. . . . Are you the Rock who used to ride here before we came?"

"Reckon I am."

Ash Preston measured Rock again, a long penetrating look that was neither insolent nor curious.

"You can tell me what you want with Preston. I'm his son Ash."

"Glad to meet you," said Rock pleasantly; and that was true, even if he had to feign the pleasure. "Do you run Preston's business?"

"I'm foreman here."

"Reckon my call's nothin' important," returned Rock easily. "But when I do call on a cattleman I want to see him."

"Are you shore it's my father you want to see most?" asked Ash, without the slightest change in tone or expression.

"Well, I'm callin' on Miss Thiry too, for that matter," rejoined Rock. "But I'd like to see your father first."

"Miss Thiry ain't seein' every rider who comes along," said Preston. "An' Dad ain't home."

"You mean *you* say he isn't home to *me?*" queried Rock, deliberately.

"Wal, I didn't expect you to take it that way; but since you do we'll let it go at that."

"Excuse me, Preston, if I can't let it go at that," Rock returned, coolly. "Would you mind tellin' me if any of the other ten Prestons are home?"

THERE the gauntlet went in the face of Ash Preston. Still he did not show surprise. The intense blue of his eyes, steady on Rock, changed only with a flare. Whatever he might be when drunk, when sober as he was now, he was slow, cold, complex, cunning. He was flint, singularly charged with fire. Rock would have felt easier in mind if Preston had shown less strength and perception. But he gave Rock the same status that Rock gave him. It augured ill for the future.

"Wal, Rock, all the Prestons are home, if you're so set on knowin'. But there's one of the thirteen who's advisin' you to dust down the road."

"Reckon that must be you, Mister Ash?"

"An' that's shore me."

"Well, I'm sorry. I don't know you. And sure you don't know me. I can't ever have offended you. Why are you so uncivil?"

Preston's glance, straying over Rock and the flashy saddle and beautiful horse, betrayed something akin to disfavor, but he did not commit himself further than to make a slight gesture, indicating the road down the Pass.

"Plain as print," went on Rock bluntly. "But I'm not takin' your hunch, Ash Preston. I'll stay long enough, anyhow, to see if the rest of your family are as rude to a stranger as you are."

In one sliding step Rock reached the ground. And at that instant heavy boots crunched the gravel.

"Hey, Ash, who're you palaverin' with?" called a deep voice.

Ash wheeled on his heel, as on an oiled pivot, and without answer strode back into the cabin, to slam the door. Then Rock turned to see who had intervened. He saw a man of massive build, in the plain garb of an everyday cattleman.

Digitized by Google
Original from UNIVERSITY OF IOWA

Rock perceived at once that he was father to Thiry and Range Preston; but there seemed no resemblance to Ash. He might have been fifty years old. Handsome in a bold way, he had a smooth, hard face, bulging chin, well-formed large lips, and great deep gray eyes.

"Stranger, I reckon Ash wasn't welcomin' you with open arms," he said.

"Not exactly. . . . You're Gage Preston?"

"Shore am, young man. Did you want to see me?"

"Yes, I asked for you. He said you weren't home."

"Dog-gone Ash anyhow," replied the rancher, with impatient good humor. "Whenever a cowpuncher rides in hyar, Ash tells him we've got smallpox or such like. He's not sociable. But you mustn't judge us other Prestons by him."

"I was tryin' to argue with him on that very chance," said Rock smilingly.

"Hope Ash didn't take you for a hoss thief. 'Course he knowed Leslie's white hoss. We seen him only yesterday."

"Well, your son didn't say. But I reckon he thought so. I bought this horse from Leslie."

"Grand hoss he is, you lucky rider," replied Preston, with a huge hand on the white flank. "Hyar, Tom," he called, turning toward a lanky youth in the background. "Take these hosses. Throw saddle an' pack on the porch of the empty cabin. . . . Wal, stranger, you're down, so come in."

ROCK had not noticed that the next cabin, some distance away under the pines, was a double one of the picturesque kind, long, with wide eaves, a porch all around, and ample space between the two roomy log structures. Evidently, the second cabin was a kitchen. But both had large stone chimneys. Deer and elk antlers, saddles and skins, hung on the walls between the cabins. Table and benches there indicated where the Prestons dined.

"Reckon it'll be pleasanter sittin' outside," said Preston, and invited Rock to a rustic seat under the trees. "What'd you say your name was?"

"I didn't say, yet," laughed Rock. He liked Preston, and could not help but compare the son most disparagingly with the father.

"Thiry didn't tell me, either," went on the rancher. "But I know you're the young fellar who was polite to her, an' did somethin' or other for her thet made Ash huffy."

"Yes, I am. It wasn't much, certainly nothin' to offend Miss Thiry's brother."

"Aw, Ash was drunk. An' he shore ain't no credit to us then. But, young man, I'll say you didn't lose any time trailin' Thiry up," went on Preston quizzically, with a twinkle in his big gray eyes.

"Mr. Preston, you—I—I—" began Rock, somewhat disconcerted.

"You needn't lie about it. Lord knows this hyar has happened a hundred times. An' don't call me 'mister.' Make it plain Preston, an' Gage when you feel acquainted enough. You're not tryin' to tell me you didn't foller Thiry out hyar."

"No—not exactly. But I came to ask you for a job.'

"Good. What'll you work fer?"

"Reckon the same as you pay any

TRADE **YALE** MARK

Fine Builders' Hardware

YALE Builders' Locks and Hardware are made of carefully selected metals to assure the necessary strength and durability. All parts are accurately machined and fitted, insuring easy and firm operation. The key mechanism provides the highest form of lock protection and the beauty and durability of finish gives a distinctive elegance.

The whole ensemble of Yale Locks and Hardware is correct in design, staunchly built by master workmen and given a final thorough test and inspection to insure its accuracy. It is the best that skilled artisans can produce, and, yet, is moderate in price.

YALE MASTER-KEY SYSTEM

In the Yale Master-key System, all locks in manufacturing plants, office buildings, institutional buildings, hotels, the home, etc., are keyed differently, each lock having its own individual key which will not operate any other lock, but one master-key will unlock them all. A system of Yale Master-keyed Locks may be divided into groups, the locks of each group being controlled by a "sub-master-key", each lock in any group having its own key, differing from all others and all the locks in the entire system being controlled by a "grand master-key". Master-keying must be built into the locks during their construction. Send for complete story of the Yale Master-key System.

other rider. I'm an old hand with ropes, horses, cattle—anythin' about the range."

"Wal, you're hired. I'm shore in need of a man who can handle the boys. I run two outfits. Ash bosses the older riders. If you fit in with the youngsters, it'll shore be a load off my mind."

"That suits me fine. I reckon I can hold up the job."

"Wal, you strike me all right. But I gotta tell you that no young man I ever hired struck Ash right. An' none of them ever lasted."

"PRESTON, if I turn out to be of value to you, will *you* want me to last?" queried Rock, and this was the straight language of one Westerner to another.

"Wal, I like your talk an' I like your looks. An' I'll say if you can handle my boys an' stick it out in the face of Ash, I'll be some in your debt."

"I don't know Ash, of course. But I can take a hunch, if you'll give it."

"Wal, Ash sees red whenever any puncher looks at Thiry. He cares fer nothin' on earth but thet girl. An' she's awful fond of him. She's never had a beau. An' Thiry's near twenty-two."

"Good heavens! Is her brother so jealous he won't let any man look at her?"

"Wal, he wouldn't if he could prevent it—thet's daid shore. An' far as the ranch hyar is concerned he does prevent. But when Thiry goes to town accidents happen, like you meetin' up with her. Thet riles Ash."

"In that case, Preston, I'm afraid Ash will get riled out here. For I reckon the same kind of accident may happen."

"Hum! Hum! You're a cool hand to draw to. What'd you say your name was?"

"I haven't told you yet. It's Trueman Rock, late of Texas. But I used to ride here."

The rancher apparently met with instant check to his mood. "What? . . . Trueman Rock! Are you thet there True Rock who figgered in gun-play hyar years ago?"

"Sorry I can't deny it, Preston."

"You rode fer Slagle—when he had his ranch down hyar below in the Pass? It was you who run down thet Hartwell rustlin' outfit?"

"I can't take all the credit. But I was there when it happened."

"Say, man, I've heerd aboot you all these years. Darn funny, I didn't savvy who you were."

"It's been six years since I left here . . . and perhaps you heard some things not quite fair to me."

"Never heerd a word thet I'd hold against you. Come now, an' meet these hyar eleven other Prestons."

Rock faced the ordeal with mingled emotions, chiefly concerning Thiry, but with nothing of the innibition he had labored under while encountering Ash. Thiry, however, to his keen disappointment, was not one of the half-dozen Prestons who answered the rancher's cheery call.

Mrs. Preston appeared a worthy mate for this virile cattleman. She was buxom and comely, fair like all of them, and some years younger than her husband.

"Ma, this is Trueman Rock, who's come to ride fer me," announced Preston. Then he presented Rock to Alice, a girl of sixteen, not by any means lacking in the good looks that appeared to run in the family. She was shy, but curious and friendly. Rock took instantly to the ragged, barefooted, big-eyed children, Lucy and Burr; and signs were not wholly wanting that they were going to like him.

"Where's Thiry?" asked the rancher.

"She's ironin', Dad," replied Alice.

"Wal, didn't she hyar me call?"

"Reckon she did, Pa, for you'd most woke the daid," replied his wife; and, going to the door of the second cabin she called, "Thiry, we've company, an' Pa wants you."

Whereupon, Thiry appeared in the door in a long blue apron that scarcely hid her graceful symmetry. Her sleeves were rolled up to the elbows of shapely arms. She came out reluctantly, with troubled eyes and a little frown. She showed no surprise. She had seen him through the window.

"Good afternoon, Miss Preston," greeted Trueman, evincing but little of the pleasure that consumed him.

"Oh, it's Mr. Rock, our new grocery clerk," she responded, with manner and tone that was a little beyond Trueman. "How do you do? And aren't you lost way out here?"

"Hey, Rock, what's thet aboot you bein' a grocery clerk? I reckoned I was hirin' a cowboy."

Whereupon Rock had to explain that he had been keeping store for Sol Winter when Thiry happened in. Thiry did not share in the laughter. Rock thought he saw the gray eyes quicken and darken, as she glanced swiftly from him to her father.

"Thiry, he's goin' to handle the boys," replied Preston, as if in answer to a mute query.

"You are a . . . a cowboy then," she said to Rock, struggling to hide confusion or concern. "You don't know the job you've undertaken. . . . What did my brother Ash say? I saw you talking with him."

"He was tellin' me your Dad would sure give me a job. . . . And that you'd be glad," replied Trueman, with the most disarming assurance.

"Yes, he was," retorted Thiry, blushing at the general laugh.

"YOU'RE right, Miss Preston," returned Rock ruefully. "Your brother was not . . . well, quite taken with my visit. He told me you didn't see every rider who came along. And that your father was not home. And that—"

"We apologize for Ash's rudeness," interposed Thiry hurriedly. She had not been able to meet Rock's gaze.

"Never mind, Rock. It's nothing to be hurt aboot," added Preston. "Ash is a queer, unsociable fellar. But you're shore welcome to the rest of us. . . . Thiry, if you never heard of True Rock, I want to tell you he's been one of the greatest riders of this range. An' I need him bad, in more ways than one."

"Oh, Dad, I—I didn't mean—I—of course I'm glad if you are," she returned, hurriedly. "Please excuse me now. I've so much work."

Somehow, Trueman divined that she was not glad; or, if she were, it was owing to her father's need and then it was not whole-hearted. But the youngsters saved

Digitized by Google Original from UNIVERSITY OF IOWA

him. They sidled over to him and began to ply him with questions about the white horse, which had captivated their eyes.

"What you call him?" asked Burr.

"Well, the fact is I haven't named him yet," replied Rock, surprised at the omission. "Can you think of a good one? What do you say, Lucy?"

"I like what Thiry calls him," she said shyly.

"Your sister has a name for him? Well, that's nice. Tell me. Maybe I'll like it," said Trueman, with a feeling of duplicity.

"Egypt," announced Lucy, impressively. "Isn't that just grand?"

"Egypt? . . . Oh, I see. Because he's like one of the white stallions of the Arabians. I think it's pretty good. . . . We'll call him Egypt."

"That'll tickle Thiry. I'll tell her," cried the child joyously, running into the kitchen.

Rock contrived, while letting Burr drag him 'round to look at the antlers of deer and elk, to catch a glimpse of Thiry at her work. She was alone in there, for Lucy had come running out. Rock thought she looked very sweet and domestic and capable. On the way back around the porch he stopped a moment to have another glimpse. This time she glanced up and caught him. Rock essayed to smile and pass on, to make his action seem casual.

But her gaze held him stock-still, and it was certain he could not find a ready smile. She ceased her ironing and transfixed him with great eyes of wonder and reproach, almost resentment. She accused him, she blamed him for coming. He had brought her more trouble. Rock was so roused that he forgot himself, and returned her look with all the amaze and entreaty he felt. Then the paleness of her face seemed suddenly blotted out; hastily she bent again to her work.

"COME, Rock, let me show you the ranch," called Preston. "We're shore some proud of it."

"You ought to be. I've seen a sight of ranches; but this one is the finest," returned Rock as he left the porch.

"Pa, soon as Thiry's done we'll have supper, so don't go far," spoke up Mrs. Preston.

"All right, Ma. I reckon Rock couldn't be driv very far," replied the rancher, drawing Rock away. "When we first come hyar, aboot five years ago, Slagle, as you know, lived down below. He wouldn't sell, an' he swore this divide was on his land. But it wasn't, because he'd homesteaded a hundred and sixty acres, an' his land didn't come half way up. Wal, we throwed up a big cabin, an' we all lived in it fer a while. The kids were pretty small then. Next, I tore thet cabin down an' built the double one, an' this one hyar, which Ash has to himself. He won't sleep with nobody. Lately, we throwed up four more, an' now we're shore comfortable."

The little cabin over by the creek under the largest of the pines was occupied by Alice and Thiry, and they, according to Preston, had just about put that cabin up themselves. But Rock's quick eye gathered at once that Preston or some one of his sons was something of an architect, and a most efficient carpenter.

Too busy to keep well!

The medical profession admits frankly that a high percentage of ill health is due to a condition that might so easily be prevented

WE Americans, what a hurly-burly race we are! Getting up by the alarm clock; racing through our meals; hurrying from this appointment to that as though our lives depended upon it.

Many of us never give a thought to our health until it has begun to decline. And as a result, millions of us are below par every day, due to a condition that in most cases might so easily have been prevented.

To constipation, physicians trace a high percentage of illness. And they say that one of the chief causes of constipation is lack of bulk in the food we eat every day.

By the simple expedient of providing more bulk in the daily diet, most people could easily escape constipation and its penalties.

** Ordinary cases of constipation, brought about by too little bulk in the diet, should yield to Post's Bran Flakes. If your case is abnormal, consult a competent physician at once and follow his advice.*

Millions of men and women have avoided constipation by eating Post's Bran Flakes every morning for breakfast. This delicious cereal supplies bulk which is so necessary in our food.

Make this two weeks' test and note the difference

Constipation must not be neglected!* Start our test now. Mail the coupon for a free sample which shows how delicious this food is. Or order a large package from your grocer. Don't expect the one serving from the sample package to correct constipation. To be effective, bran must be eaten regularly.

Every day for two weeks, eat Post's Bran Flakes with milk or cream. Its crispness and flavor will delight you. Vary the dish, if you like, with fruit or berries. It also makes marvelous muffins and bran bread.

We predict that after two weeks you will find this delicious bulk food a natural regulator and will notice a big difference in the way you feel.

Then follow the example of millions of healthy people who eat Post's Bran Flakes every morning.

Lilac keeps your skin clear!

Unseen nicks

can raise hob with your skin

Unseen nicks the razor always leaves give germs a chance to start embarrassing little skin trouble-spots.

Now they need *never* happen!

Try this simple way of protecting your face—cleanse it all over, after each shave, with Pinaud's Lilac.

Lilac is the purest and finest skin antiseptic known. It's tonic, too. Gives your skin a ruddy glow!

And the same wonderful ingredients, newly processed, make Lilac *blander* than before—more delicately fragrant—and give it a soothing *after*-feel.

Buy Pinaud's Lilac today! At all drug and department stores. (Signature of Ed. Pinaud in red on the bottle.) Pinaud, Paris, New York.

PINAUD'S LILAC

Copr. 1928 Pinaud, Inc. ‖ *Lilas de France* ‖

The grassy divide sloped gradually to the west, and down below the level, where cedars grew thicker and the pines thinned out, were the corrals and barns and open sheds, substantial and well built. Rock found his white horse in one of the corrals, surrounded by three lanky youths from sixteen to twenty years old. Preston introduced them as the inseparable three, Tom, Albert, and Harry. They had the Preston fairness, and Tom and Harry were twins.

"Rock, if you can tell which is Tom an' which is Harry, you'll do more'n anyone outside the family."

"Son-of-a-gun if I can tell now, lookin' right at them," ejaculated Rock.

THE barns were stuffed full of hay and fodder, some of it freshly cut. A huge bin showed a reserve of last year's corn. Wagons and harnesses were new; a row of saddles hung opposite a dozen stalls, where the Prestons no doubt kept their best horses. But these were empty now. A long fenced lane ran down to pastures. Horses were whistling down there, cows mooing, calves bawling.

Both money and labor had been lavished on this ranch; and it was something to open the eyes of old-time homesteaders, like Slagle. Even prosperity would not have induced Slagle to such extremes of improvement.

"Preston, if I owned this ranch I'd never leave it a single day," was Rock's eloquent encomium.

"Wal, I'd shore hate to leave it myself," returned the other, tersely.

"How many cattle have you?" queried Rock, because he knew this was a natural question.

"Don't have much idee. Ten thousand haid, Ash says. We run three herds, the small one down on the Flats, another hyar in the Pass, an' the third an' big herd up in the Foothills."

"Naturally, the third means the big job," said Rock.

"Shore will be for you boys. Thar's a lot of cattle over thar thet ain't mine. Ash said eighty thousand haid, all told, in the Foothills. But thet's his exaggerated figurin'."

"Gee! So many! Who's in on that range beside you?"

"Wal, thar's several heavy owners, like Dabb, Lincoln, Hesbitt, an' then a slew of others, from homesteaders like Slagle an' Pringle to two-bit cow-puncher rustlers. It's sort of a bad mess over thar. An' some of the outfits haven't no use fer mine."

"Ha! That's old cowboy breed. You can't ever change it. . . . I know Lincoln. But Hesbitt is a new one on me."

"Yes, he come in soon after me," replied Preston shortly. His speech, to Rock's calculating perceptions, had lost heartiness and spontaneity. But Rock doubted that he would have observed this subtle little difference had he not come to Sunset Pass peculiarly stimulated by curiosity.

"Sol Winter told me you'd worked a new wrinkle on the range," went on Rock, matter-of-factly. "Wholesale butcherin'."

"Yes. Always did go in fer thet. Hyar in this country I first set in killin' an' sellin' to local butchers. Then I got to shippin' beef to other towns, not far along the railroad. An', all told, I've made it pay a little better than sellin' on the hoof."

"Reckon it's a heap harder work."

"We Prestons ain't afraid of work," said the rancher. "But it takes some managin' as well. I made a slaughterhouse out of Slagle's place, an' then we do some butcherin' out on the range."

"What stumps me, Preston, is how you get beef to town in any quantity," responded Rock.

"Easy for Missourians on these hard roads. We got big wagons an' four-hoss teams. In hot summer we drive at night."

"So you're from Missouri," went on Rock, with geniality. "I sort of figured you were. I once worked with an outfit of Missourians. They have a lingo of their own, somethin' like Texans. Better educated, though."

"My girl Thiry went to school till she was seventeen," Preston spoke with pride. "But the rest of them had little schoolin' 'cept what Thiry has taught them out hyar. . . . Wal, you'll want to unpack an' wash up fer supper."

It was just sunset when Rock came out of the cabin assigned him. Sitting down on the stone steps of the porch he found there was an open place between the trees permitting unbroken view of the Pass.

Here, striking him like an invisible force in the air, was the wild scene famous among riders all over the Southwest. Rock had been asked about Sunset Pass more than once while he was in Texas.

A BELL called him to supper. When he reached the cabin, to find the Preston boys straddling the benches, it was to be accosted by the rancher.

"Say, cowboy, when you hyar the supper bell you come a-rarin'. Never wait for a second bell."

"Did you have to ring a second bell for me?"

"I did—or you'd have missed your supper," returned Thiry. She was standing near where Preston sat at the head of the table. Her face seemed to catch the afterglow of sunset, and her eyes, too.

"Thanks . . . I'm sorry to be late. I didn't hear. Guess I was lost in the sunset."

"Wal, it wasn't its best tonight. Too much sun. Rock, you set hyar on my right. Thet'll put you across from Thiry. Are we all hyar? . . . . Whar's Ash?"

"He rode off somewheres," replied one of the boys.

"Wal, Rock, meet Range Preston, an' thet's his real name; an' Scoot, which is short for some handle Ma gave him once, an' Boots, whose proper name is Frank. . . . Boys, this is Trueman Rock."

Preston's humorous introduction, and Rock's friendly response elicited only a "howdy" from each of these older sons.

"Reckon we can eat now," added Preston. "Set down, Rock, an' pitch in."

The long table was bountifully spread, steaming, savory. Mrs. Preston sat at the foot, with Lucy on one side and Burr on the other. Alice's place was next to Rock, and she most solicitously served him.

There was hardly any unnecessary conversation. The male contingent, Rock observed, devoted themselves to the supper, like any other hungry cowboys.

"This way is so gentle safe and sure. It stops Corn pain in one minute!"

IF you suffer from corns, it is only because you go about getting relief the *wrong way.*

There is only one way a corn can ever be removed permanently—*by removing the cause*—friction and pressure of shoes. It will then *heal itself* without any medication whatever.

Although such a method has been in existence only a few years, it has already completely revolutionized the treatment of corns.

Millions of people who suffered from corns all their lives enjoy complete freedom from these painful growths since adopting this new, safe, sure, scientific treatment.

Wm. M. Scholl, M. D., the noted orthopedic scientist and inventor of scores of appliances for the more serious forms of foot trouble, perfected this method which makes corn pain a thing of the past.

It is a thin, protective, healing pad, that acts on the principle of *correction* and *absorption,* known as Dr. Scholl's Zino-pad.

Zino-pads end pain the instant they are applied—not by deadening the nerves, but by *removing the cause*—friction and pressure of shoes. Relief is so instantaneous, you speedily forget you ever had a corn.

If applied at the first sign of irritation caused by tight shoes, Dr. Scholl's Zino-pads are positively guaranteed to *prevent* corns.

Old-time methods—treating corns with powerful liquids or caustic plasters—are wrong in principle because they *ignore* the cause—often leave the toes sore from acid burn. Zino-pads won't harm the most delicate skin.

Zino-pads are also made in special sizes for Callouses and Bunions. Buy a box today. On sale at all drug, shoe and department stores—35c.

For Bunions

Dr. Scholl's Zino-pads for Bunions stop pain at once, protect the swollen joint from rubbing and pressing of shoe. Safe, soothing, healing.

For Callouses and Burning Soles

Dr. Scholl's Zino-pads for Callouses immediately relieve pain and remove the friction and pressure of the shoe. Also instantly effective in relieving burning soles.

Made in the Laboratories of The Scholl Mfg. Co., Chicago, World's Largest Manufacturers of Arch Supports, Foot Comfort Appliances and Foot Remedies.

Put one on—the pain is gone!

Digitized by Google

Original from UNIVERSITY OF IOWA

Presently Rock stole a glance at Thiry, to catch her eyes on him. That made him so happy he did not dare risk another. But he could see her plate and that the food on it diminished slowly. She was not hungry. His coming to Sunset Pass had unaccountably troubled her.

It puzzled and annoyed Rock. It was far from flattering. He was not such a cad that he would impose himself upon a girl who disliked him on first sight. But Rock could not believe that could be wholly true. What had he done to deserve that?

WHEN supper ended, dusk had just fallen. It was not going to be very dark, at least early in the evening, for a half moon soared out from under the white, fleecy clouds.

Rock sat on the edge of the porch, attended again by the children. The older ones stalked away, while the younger lingered, evidently accepting the newcomer. The women-folk, except Thiry, who had gone into the other cabin with her father, were in the kitchen.

Presently the rancher came out alone.

"Boys, hyar's some work fer you to break Rock in on tomorrow," he said. "Grease the wheels of the green wagon. Then hitch up an' go down to the slaughter-house. Fold tight an' pack all the hides that are dry. Haul them up to the barn. An', Tom, next mornin', soon as it's light, you hitch up again an' drive down an' meet us at the Flats. Then you come back home. An' thet day, an' till I come back, you-all work on the new pasture fence."

"All right, Pa," drawled Tom.

"Rock, thet doesn't sound much like work to you. But your job is to keep these three harum-scarums from ridin' off into the woods. You'll have your hands full, fer they're shore Indians."

"Boss, if I can't hold them in I'll do the work myself," replied Rock.

Before the hour passed, Mrs. Preston and Alice came out, and Thiry, too, and they all sat around on the porch and grass enjoying the cool breeze coming up the Pass. The moon shone brighter as the clouds grew more open. There were moments of pale gloom, then a long interval of silver light.

The shadow of the pines on the white grass fascinated Rock. And presently he found that being there, except for the silent Thiry so disturbing to him, was no different from being in the company of almost any hospitable Western family. The discordant note—Ash Preston—was absent. Rock made himself as agreeable as he knew how, to the youngsters, especially, and then to the mother, who responded readily.

Presently Preston retired within his cabin, and soon after the boys slouched away. Trueman rose to say good night.

Thiry had been standing some moments in the shadow of the cabin, apparently listening.

"Mr. Rock, would you like to walk with me to my cabin?" she asked.

"Why—pleased, I'm sure," replied Rock, haltingly, scarce able to conceal his amaze and joy. What old-fashioned courtesy! Good nights were exchanged, and Rock found himself walking away under the great dark pines, in the shadowed moonlight, with Thiry beside him.

Thiry walked beside him, slender, light-stepping, with her profile showing clear-cut and cold in the moonlight. As she did not speak, Trueman dismissed the idea that her invitation was simply an old-fashioned courtesy. Therefore he made no attempt at conversation. When they had covered most of the distance to her cabin, without exchanging a single word, he felt anew and provokingly the growing excitement of this situation.

At last she slowed her step, hesitated and halted under the magnificent pine tree that made dark shade around her cabin. Outside the circle there were spaces of silver moonlight, and then streaks and bars of black shadow across the light. The night wind breathed in the huge spreading mass of foliage overhead. How supernaturally beautiful the place and moment!

The girl confronted Trueman, and her face had the sheen of the moonlight, her eyes the darkness and mystery of the shade.

"Mr. Rock, I want to talk to you," she said, very quietly.

"Yes?" rejoined Trueman encouragingly, but he was not in the least encouraged.

"Have you been . . . wholly honest in coming out here to Sunset Pass?"

"Honest! What do you mean?" flashed Rock, his pride cut, and his blissful anticipations fading.

"What did you tell Father?"

"I asked for a job."

"Did you let him believe the job was your sole reason for coming?"

"No. He said I hadn't been long in trailin' you up. He was good-natured and nice. So I didn't deny it. I laughed and agreed with him."

"Oh, you did!" she exclaimed, somehow shaken out of her reserve. "That's different. I apologize."

"Miss Preston, you don't owe me any apology."

"Yes, I do. I thought you'd deceived Dad—the same as so many riders have done."

Rock had averted his face. He was astounded and hurt, suddenly, coldly, checked in his romantic imaginings. What manner of girl was this Thiry Preston? It might be that she was a worthy sister to unsociable Ash Preston. But that resentful thought could not abide with his loyalty.

"MR. ROCK, do you remember the last moment when you were with me at the corral in Wagontongue?" she asked.

"I'm not likely to forget it."

"You looked something at me. You didn't say so, but you meant you'd see me again. Now, didn't you? Honest?"

"Miss Preston, I—I certainly did," answered Rock hastily. "But, indeed, I didn't mean to be rude or—or bold."

"I don't think you were either," she said earnestly. "I . . . we might sit down." She indicated a rustic bench under the pine. "I am tired."

The bench appeared to catch a gleam of shadowed moonlight. Thiry could here be seen more clearly than while she stood in the shade. Rock preferred to stand, and he wished he could not see her so well.

"Mr. Rock, please don't misunderstand," she began, looking up. "I was far from being insulted or even offended, that day in the store and at the corral. At the last, there, you meant you'd see me again. And you've done it. Now we're concerned with that."

"Reckon I might have waited a decent little while," responded Rock, as she paused. "But I never met a girl like you. I wanted to see you again—soon. Where's the harm?"

"Indeed there isn't any harm *in* it, Mr. Rock; but harm can come *from* it."

"How?"

"Through my brother Ash."

"Well, that's not hard to believe," rejoined Rock, with sharpness. "The other day he was a drunken, vulgar lout. He ought to have been kicked out of that corral, and I'd have done it but for you. Today, when he was sober, he was a different proposition to meet. He was cold, mean, vicious. He had no hospitality of the West—no idea what was due a tired and hungry stranger. But at that I'd prefer him drunk. In my day on the range I've met some—"

Trueman bit his tongue. The girl had suddenly covered her face with her hands.

"Miss Preston, forgive me" he burst out, "I didn't mean to distress you. I just spoke out quick, without thinkin'—"

SHE drew her hands away and lifted her head. "You're quite right . . . Mr. Rock," she said, unsteadily. "Ash is . . . all that you say. To my shame I confess it. All my life I've made excuses for him. It's no use. I—I cannot do it any more. . . . But that's not the point"

Rock sat down beside her, his anger flown; but there was another kind of heat running along his veins. How this girl must love her brother!

"I know. The point was the harm that might come through Ash. Please be frank. If I've brought this distress upon you, I'm entitled to know why."

"I've always been very, very fond of Ash," she said tremulously, struggling for a composure that would not return. "Partly because he was always so bad—and I seemed the only one who could influence him for good. Ash cares for nothing but me. Not for father, mother, brothers, or his other sisters. He hates men—he hates horses—he hates cattle. But I—I've stuck to him until now. I—I—Mr. Rock, I can't tell you."

"Spare yourself, Miss Preston," returned Rock impulsively. "It's wonderful, beautiful of you. I admire and respect you for it. But I can't understand."

"No one can," she said, sadly. "Alice thinks I'm mad. Oh, how I dread this. But it has to be done, more with you than any other who ever tried to be friends with me. I've known lots of boys and liked them, too. But not lately. As I grow older Ash grows more jealous. He fears I might like some cowboy."

"Oh, I see. Is such a remarkable thing possible?" returned Rock, unable to resist a slight sarcasm

"Of course it is," she retorted. Her eyes flashed at him. "What do you think I am, anyway?"

"Under the present circumstances, I reckon I dare not tell you."

"Mr. Rock, you are going to disappoint me presently."

"Good heavens, what do you think *I* am, anyway," retorted Rock, in turn, growing almost desperate.

The Roxy
Walter W. Ahlschlager
Architect
Chanin Construction Co.
General Contractor

The Roxy Theatre is protected by JOHNS-MANVILLE *Built-up Asbestos Roofing*

The Roxy Theatre was built at a cost of twelve million dollars. Here is the world's greatest theatre, the largest of pipe organs, a famous broadcasting studio, magnificent lobbies, comfortable dressing rooms, offices, club rooms and rehearsal halls all under one roof—and that roof of Johns-Manville Built-up Asbestos. The roof was chosen with full knowledge that it must give positive protection to one of the most costly interiors ever constructed.

The selection of this roofing to protect the beautiful appointments in the Roxy Theatre is one more endorsement of the record which Johns-Manville Built-up Asbestos Roofs have made all over the country. Tens of millions of square feet of Johns-Manville Built-up Asbestos Roofing cover theatres, large and small, factories, warehouses, railway stations, public buildings and many other structures.

For every building with a flat or low pitched roof, regardless of size or cost, this product of Johns-Manville offers guaranteed safety, long-lived and certain performance, with little or no maintenance costs. In fact years of use with no repairs is the general rule.

Johns-Manville—Master of Asbestos

More than fifty years of exhaustive study of Asbestos has established Johns-Manville as the world's foremost technicians in handling this useful mineral. Asbestos from mines owned by Johns-Manville is manufactured in our own factories into scores of products used to guard life and property, to conserve power and to serve many other uses.

All Industry is Served by Johns-Manville

Besides the Roxy and other famous theatres, millions of square feet of Johns-Manville Built-up Asbestos Roofs cover factories, warehouses, railroad structures and every type of building which requires fireproof, long-lived protection.

Johns-Manville Conserves Heat

On boiler pipes for high pressure steam, or the lower temperatures of home heating plants, Johns-Manville pipe insulations reduce heat losses to a minimum. Johns-Manville high temperature pipe insulations prevent losses by radiation, and avoid overheating of surroundings. On boiler pipes in residences, Improved Asbestocel saves householders tons of coal yearly.

Johns-Manville Packings Cut Costs

Johns-Manville Standardized packings provide a packing for every possible packing purpose. By using these packings, important savings are made by reducing the stocks required, by the long life of Johns-Manville packing, and, where friction is a factor, by doing away with the excessive friction of ordinary packing.

"I make a good deal of what Mother and Alice and Dad think," she said gently.

"Well, what's that?" he queried, suddenly mollified. She could do anything with him.

"I would dare tell you, but it would only make this unfortunate situation worse. I only hint of it, because it's not fair to let you think we—or I—dislike you."

"Oh, then you don't?"

"No. I—I think I really like you, though it's such short notice for me. And, Mr. Rock, if I had my way, I'd like to be friends with you."

"Thank you, Miss Thiry," he returned gratefully, swayed by her unexpected avowal. "Honest, I didn't hope for so much. All I wanted was a *chance* to prove I could deserve you . . . your friendship."

"I—I dare say you could," she returned, looking away. "Mr. Winter used to tell me about you. Then Dad. I never saw him taken with anyone as he is with you. . . . But the thing is I *can't* be friends with you."

"Because of Ash?"

"Yes. He will not let any boy or man be friends with me—at least out here at Sunset. Cowboys have called on me here, and many have come to ride for Dad. Ash soon got rid of them."

"I WONDER how he did all that. I know cowboys well, where a pretty girl is concerned. And I'm just curious."

"I'll tell you. Ash has chased them away in every conceivable manner. He's lied, as he lied to you about my not seeing riders who came to Sunset. He'd coolly invite them to leave. He'd bluff. He'd threaten. He'd cripple and shoot their horses. Oh, that was the vilest thing! He'd get them drunk while on guard—which Dad couldn't forgive. He'd ridicule any sensitive cowboy before the outfit—so terribly that the poor fellow would leave. He'd concoct schemes to make a cowboy seem negligent or crooked. And, as a last resource, he'd pick fights. Oh, he has beaten several cowboys brutally. Then, worst of all, he has thrown his gun on more than one. Archie Black will be a cripple for life. And Jack Worthington nearly died of a gun-shot."

"How very interestin'!" exclaimed Rock, and for the life of him he could not keep his voice normal. "And has nothin' ever happened to this bully?"

"Oh, Ash didn't always come out scot-free. But nothing to bother him. I don't believe Ash has nerves or heart or feeling."

"Yet you love him!" ejaculated Rock, bitterly.

"I do—more because I seem the only one. But it's not so much that. I've kept him from going to the bad."

"How could he be any worse?" asked Trueman, incredulously.

"Oh, he could be. You don't know—you can't understand. But I do."

"Miss Thiry, have you been so vastly concerned for the good health of all these poor lovesick cowboys as you seem about mine?" asked Rock.

"You are sarcastic again. Oh, you're not—so nice as I thought you'd be. . . . Yes, I was concerned, worried about these boys. But I've never been so—so scared as I am over your coming."

"Scared! For me?"

"Yes, for you, a little. Oh, I can't lie to you. I'm scared because of the—the harm that may come—if you stay."

"A little! How nice of you! All you think of is poor dear Brother. Thanks, Miss Preston. I'm beginnin' to believe I idealized you rather high."

"You're perfectly horrid!" she cried passionately. "Yes, indeed, you must have idealized me beyond my merits."

Rock leaned closer to study the lovely face, the deep eyes that flamed at him yet tried to hide true feelings. He could speak bitter words, but was instantly full of remorse. Yet how sweet to hurt her!

"Look me straight in the eyes," he said, suddenly. "You can't—you can't."

"Why—you—certainly I can," she returned, startled. And she did gravely, tragically. What a marvelous abyss Trueman Rock gazed into! He lost himself there.

"You said you couldn't lie?" queried Rock cruelly, overcome by his own catastrophe.

"I never told—a—a—black lie in my life," she faltered, with her head lifting.

"Then—are *you* honest with me? What is the reason you want me to run off like a coward?"

"I've been trying to tell you," she replied, hastily ignoring his first query which he saw had made her start. "But I don't want you to be a coward. I'd think it brave, generous, to help me. I told you and I tell you again, harm, terrible harm, might come of this, if you stay. Ash will not try any of his tricks on you. For you are different. Why, my Dad said to me, not an hour ago, 'There, lass, is a cowboy whose face Ash won't rub in the dirt. An' he won't be throwin' guns around so careless. This True Rock is a different kind of a hombre from all those Ash has stacked up against.' . . . I was thunderstruck. It seemed almost as if Dad was *glad*. I never saw him speak like that. And lightning flashed from his eyes. . . .

"Oh, this spurred me to speak with you. Can't you see? You are different. You're a man—and one with a—a—please forgive—a bloody record. I don't despise you because of that. Since I've lived West I've learned there are bad gunmen and good gunmen. My brother Ash is one kind—you are the other."

"THIRY PRESTON, first you are cruel, then you are kind," replied Rock hoarsely, as she paused to catch her breath, with a hand pressed upon her heart. "If you want to drive me away, I advise you to keep on bein' cruel."

She was in the grip of strong emotion now, beautiful and soul-moving to Rock.

"You wouldn't stay here—with us—and—and leave me alone?" she asked, with a simplicity wholly free of vanity.

"Yes, I might—if you cut me cold or slammed the door in my face," he answered.

"That I couldn't do. If you stay on, living here and eating at our table, I could not help but talk to you, be with you some. I think it would be nice—if Ash wasn't around. I—I'm afraid I might like you. There isn't any reason why I shouldn't. Now, if you stayed—you'd—you'd—"

She broke off as if unable to find adequate expression. But her voice, her look, were more than sufficient to make Rock fight temptation. How easy to lie to this innocent girl! He could do that and stay on here, and deceive Ash Preston too.

"Yes, Miss Thiry, I would," he returned, swiftly, to get by the danger. "I would be a very great deal worse than any cowboy you ever knew."

"So . . . you see," she said, entreatingly. "Then you and Ash would fight over me. First with fists, probably, like a couple of beasts. Then with guns! . . . Oh, that's the horror of it. There would be blood spilled. He might kill you, which would be terrible. But most likely you would kill *him*."

"Suppose I did?" flashed Rock, torn between pity and jealousy.

She leaped up to stand rigid, with clenched hands and swelling bosom, with such blazing eyes of passion that he was stunned.

How wonderful she was! Almost he forgot all in sheer ecstasy. Then remorse laid hold of him again. He was torturing her.

"MISS THIRY, forgive me again," he pleaded. "Please sit down. . . . That was only my temper. I hope I'd never get into *any* kind of a fight with Ash."

"Oh, what are good intentions to me—where a woman is concerned. You couldn't keep out of it. You have a fiery temper. . . . And Ash . . . he would make a saint fight."

"I'll just make up my mind I won't fight. I'll keep out of his way. I'll do anything—stand anything for you!"

"But you've only seen me once!" she exclaimed despairingly.

"I'm not committin' myself yet, because I'd hate to embarrass you more without bein' sure. But I'm afraid, if seein' you the other day wasn't enough, this time *is*."

"Oh, please go way tomorrow, before it's too late," she implored.

"You want me to go as bad as that?" asked Rock, weakening.

"I beg you to. I've begun to be afraid of you, and I wasn't at first. You're so sharp—so keen. You'll—"

Suddenly, in her agitation, she jerked a hand to her lips, as if to silence them. Her eyes dilated. She stared up at Rock like a child who had almost betrayed herself. And Rock, if he did not read her mind, had intuition enough to grasp that part of Thiry's fear, perhaps the greater, was not due to the inevitable clash between him and Ash. She was afraid he would find out something. Rock hastened to thrust the insidious thought from him.

"Afraid of me!" he ejaculated, hurriedly. "Why, Thiry—Miss Thiry—that's absurd. Right this minute I'm the best friend you have in the world."

"Then prove it," she said, bending closer.

"How?"

"Go away tomorrow."

"And never see you again?" he queried, blankly.

"It would be best," she returned, and looked away. "But I didn't say you'd never see me again. Perhaps I—we might meet in town. I'm going in over the Fourth. Mrs. Dabb is to give a dance. I could see you there."

Paul Whiteman Likes the Toasted Flavor of Luckies —His Favorite Brand

"It was but recently, when I started to act as master of ceremonies with my band at the Paramount Theatre, that I realized how vital perfect voice condition was to a performer. I have always been a consistent smoker and fortunately, Lucky Strikes were my favorite brand. I like their toasted flavor and, best of all, I can smoke as often as I like, without fear of irritating my voice, which is becoming a great asset in my work."

Paul Whiteman

The Cream of the Tobacco Crop

"Discriminating smokers know the excellence of Lucky Strike Cigarettes by their distinctive taste, flavor and lack of bad after-effects. We buyers know why Lucky Strikes possess these superlative qualities; because we buy the 'Cream of the Crop' for their manufacture."

G. C. Battles
Tobacco Buyer

At that Rock laughed rather wildly. "At Amy Wund's house? Not much!"

"Then at the dance. It won't be at her house. I—I will go with you—if you ask me."

"Don't bribe me to run off from Sunset Pass," he said, ponderingly. "But thank you for sayin' you'd go with me. I'd like to. But I'm not invited, and don't expect to be."

"I'll see you get an invitation, Mr. Rock."

"Don't tempt me. I'd almost give my head to take you to a dance. I'd almost quit my job here and then come back to it again.

"But that would be a lie."

"Well, I might lie too. I don't mean *to* you, but *for* you."

"PLEASE, Mr. Rock, go away tomorrow before trouble comes. I'll never be able to thank you enough. It's the only chance you have to be my—my friend."

"You're a queer, wonderful girl," he replied, puzzled and sad.

"I will come to town oftener—then," she almost whispered.

"You'd meet me in town and hope to deceive Ash?"

"Yes. I—I'll try," she faltered.

"But he'd find it out. You can't fool that hombre. Then he would have a real case against me. He'd hunt me down, force me to meet him."

"Oh!" she cried, poignantly.

"If I give in to you and leave Sunset Pass, I'd never willingly see you again," he went on, with more bitterness.

"Mr. Rock, that wouldn't be such a—a loss to you, as you imagine now," she answered.

"I don't know. All I know is that I hate to refuse you anythin'. But, listen. There's two sides to this deal, and here's mine." He leaned close, so that he could see her better in the pale shadow. "I want you to know about me. I was born in Illinois. My mother and father are livin'. They're quite old now. I was home five years ago. I have a sister. She ought to be nineteen now, a fine, pretty girl. Well, I went to school till we moved out West. Then I went to ridin'. My father lost out in the cattle business and took the family back home. I stayed. That was . . . fourteen . . . sixteen years ago.

"During these sixteen years I've lived the life of a wanderin', ridin', drinkin', fightin' cowboy. I stuck here on this range longest of all. I don't say I was bad, but I wasn't much good. . . . I was always gettin' in trouble for other people. . . . That's how I came to shoot Pickens. It was a good riddance. But the sheriff then, Cass Seward, was a friend of Pickens. I didn't want to kill Seward, so I left Wagontongue. I stayed away six years. Then I had to come back. I got there the day I met you. Found out Seward was gone. Found out a lot of other things. I wanted to know about my old girls.

"I had always been crazy over pretty girls. Sol Winter told me a lot of bad news about the girls, and about his son Nick. So I lost my happy mood. I wanted to go out and get drunk. Sol asked me to keep store for him. And I sat there sinkin' into one of the old black spells that had kept me from makin' someone out of myself. . . . Then you walked in that store. And I didn't want to go out and get drunk. Somethin' happened. I don't know yet what it was. But it was wonderful. Sure you remember how funny I was?

"But, I'm sure not so funny now," he went on, with dark passion. "Somethin' happened to me. It's been such a tearin', changin' somethin' that I don't know myself. I'm findin' out little by little. Seein' you this second time has helped a lot. I'll make a clean breast of all—soon as I know. But, right now, I know—if you don't turn your back on me—I'll never drink again. Or hunt for a fight! Or waste my time and money!"

"Mr. . . . Rock!" she exclaimed, rising, low-voiced and trembling. "Are you telling me you—you love me?"

"No. I'm not tellin' you that," he returned doggedly. "But I'm sure afraid somethin's terrible wrong. . . . Miss Thiry, please—please don't make me go away."

"Could I make you do anything? How silly! But if you're manly enough to save me misery, you'll go."

"That's hittin' hard. But suppose I get it into my mind that by *stayin'* I can save you *more* misery?"

"Mr. Rock!" she cried, shocked.

His sudden query had been a random shot; but it struck home. Rock's heart leaped. He had to stifle wild impulse.

"*Quien sabe?* I might," he returned, almost coldly. "Give me a day to think over whether I'll go or stay. Reckon so far the fight's one-sided, and in your favor. . . I'll meet you tomorrow night and tell you."

"Tomorrow night. Here, at this hour?" she returned, rising from the seat.

"Yes. Good night, Miss Preston."

"I'm very, very sorry I—you— Good night."

Rock gave her one long look, as she stood now, in the moonlight. He would carry that picture in his heart of hearts all his days. Then he strode away, and when he turned, at some distance, she was still standing like a white statue.

HE MADE his bed on the porch, so that he could lie there and watch the moon, and think over this maddening situation.

For hours it seemed he never got anywhere so far as decision was concerned. His mind was chaotic The moon soared white and grand above the pines and the night wind roared. Coyotes murmured eerily. A deep-voiced hound bayed them in answer. A low soft murmur of running water came to him in the lulls of the wind.

At last he admitted that he loved Thiry Preston. Time was nothing. He had always known her, and though the hours were but few since their actual meeting, he was now measuring their incomprehensible length and fullness. But he hated the idea that he only loved her. That was putting her with the others. His love for Amy, Polly, and Kit had merely been growing pangs toward this real and beautiful thing.

It was great, and would suffice Rock for all time. Not one second longer did he hesitate about sacrificing himself for her happiness.

This resolve cleared his mind of vacillation and bewilderment and conflicting tides of emotion. The rest was easy and required only intelligence. If he could best serve Thiry Preston by passing out of her life as quickly as he had come into it, he would do so. But he had a strange, persistent recurrence of a doubt. He recalled her words, her looks, her actions, and relentlessly analyzed them. His love, once acknowledged, incited and stimulated his mind.

BEFORE the moon tipped the pines above the rim of the Pass, which was late in the early morning hours, Rock had solved at least the second of his three problems.

Thiry Preston was honestly afraid her brother Ash would kill him, or that he would kill Ash. So she wanted to send Rock away. But only so far was she wholly honest.

She feared Rock would discover something wrong here at Sunset Pass. Ash Preston was crooked. No doubt of this! Perhaps the father was too, and some of the brothers. But Mrs. Preston was ignorant of it; so were Alice, and the younger brothers. Thiry bore this burden alone. That was the secret of her sad eyes and lips. That was the power Ash Preston had over her—love for him and fear. That was why no cowboys ever got a fair chance to win Thiry Preston's friendship.

To go or to stay, that was the question! If he left her, she might love him, surely would always remember him regretfully, tenderly. If he stayed, she would hate him. But then he might save her.

Rock knew the West. He had become a part of it. The Prestons were new, comparatively, to this wild range. He knew Western men, their slow evolution, their uncanny power to suspect and search out and find among them the cattleman who transgressed the unwritten laws. All cattle raisers stole from one another. But there was a distinction with a difference.

Gage Preston was getting rich—a little bit swiftly for a rancher on an ordinary scale. How? Rock answered the query in many ways; but only one way seemed tenable. Preston sold cattle on the hoof, the same as other ranchers. None but rustlers ever sold cattle that did not belong to them. And certainly Preston could not be a rustler. It was inconceivable that Ash Preston could be a rustler, either, at least without his father knowing.

The Prestons had become butchers of cattle on a considerable scale. Did anyone, outside themselves, know just how many steers they butchered? What a pertinent question here! Rock was certain that he would find out that no outsiders knew how many head of stock they killed. And here was the gist of the matter:

Some of the Prestons, with Ash at the head, and the father either in with them, or unable to prevent it, were killing cattle not their own, burning or hiding the skins, and selling the beef at near and distant points.

"Good lord!" muttered Rock, under his breath. "I've bit it plumb center. The fools, thinkin' they can hide that long! . . . Gage Preston ought to have more sense. But it's that rattlesnake son who's got this outfit buffaloed. No wonder poor Thiry has sad eyes. . . . Well, by heaven, I'll stay at Sunset Pass!"

(*To be continued*)

Digitized by Google Original from UNIVERSITY OF IOWA

If your gums are the least bit tender start with IPANA *tonight!*

YOUR teeth may be as white as ivory—yet faced with grave and serious trouble.

There may not be a cavity in your mouth, or a filling in your head, yet you may need the attention of a good dentist and the use of the correct way of caring for your teeth.

For your gums may be tender—they may even show a tendency to bleed. If your tooth brush "shows pink"—even slightly or occasionally—it is a sign that something is amiss and that your gums need immediate care.

What to do if your gums need attention

Talk to your dentist. Probably he will explain the matter to you in some such terms as this:

"The food you eat is to blame. For it is too soft for the teeth and gums. It lacks fibre and roughage. It gives the gums no friction, no stimulation, no work. The blood does not circulate properly through the tissues and the gums become undernourished. And this often leads to more serious troubles."

But your dentist can do more than explain the cause of the difficulty; he will point out to you, too, the correct way to offset the bad effects of your diet.

In all probability, he will order gum massage. For today thousands of good dentists say to their patients:

"Massage the gum tissue with Ipana at the same time you brush your teeth. If your gums are tender to the brush, massage them gently at first with Ipana on the finger tips. For Ipana is as helpful to the gums as it is cleansing to the teeth."

HEALTHY GUMS ARE FIRM AND CORAL PINK

The pressure and the friction of a light massage stirs the dormant blood within the gum walls, and speeds fresh, clean blood to take the place of the stagnant old.

How Ipana aids massage in toning the gum tissues

The use of Ipana tones the outer walls of the gums, for its gentle healing ingredient (ziratol, a well-known antiseptic and hemostatic) is helpful in restoring to the gums their needed and normal tonicity.

Massage and Ipana can make your gums firm and healthy. Their color will be right. You avoid "pink tooth brush". You improve the health and beauty of your mouth.

We have placed a coupon in the corner of this page. It offers you a trial tube, enough for about ten days. Use it if you will. Certainly this tube will prove to you Ipana's delicious flavor, its incomparable power to keep your teeth clean, white and beautiful.

Get a full-size tube at the nearest drug store

But ten days are all too short to show you what Ipana can do for the health of your gums. At least a month is needed—a full-size tube will show you a far better result. So, we urge you to go to your drug store and buy a full-size tube (about 120 brushings). Use it to the last squeeze! Then will you know what Ipana can do to tone and strengthen your gums—to improve the health of *all* your mouth!

IPANA Tooth Paste

MADE BY THE MAKERS OF SAL HEPATICA

BRISTOL-MYERS CO., Dept. J58, 73 West Street, New York City

Kindly send me a trial tube of IPANA. Enclosed is a two-cent stamp to cover partly the cost of packing and mailing.

For the

MODERN GRADUATE BULOVA WRIST AND STRAP WATCHES

EMPRESS
2 diamonds; 4 sapphires; exquisitely engraved $49.50

PATRICIA
15 jewel movement; exquisitely engraved . $24.75

COLLEGIATE
Sports watch; 15 jewel movement; radium dial $28.50

MISS AMERICA
Sports watch; enamel inlaid; radium dial . $37.50

"MANY years ago, when I was graduated, my Dad gave me this Bulova Watch, and it is as perfect a timepiece today as it was then!"

To be assured of such dependability in the watch you select for the modern graduate, is to be assured that your gift will grow dearer and dearer as the years roll by—remaining ever faithful to its trust—to tell time *on* time!

To present a Bulova Watch is to give a timepiece that is the culmination of all that has been achieved for centuries in the building of perfect timepieces, including those distinguishing advancements in watch construction that owe their origin to Bulova.

Bulova Watches vary in price from $25 to $2500—each a dependable timepiece!

BULOVA WATCH COMPANY

How you can get
Better
Values
in home furnishings

{send for FREE BOOKLET A-5}

"THE Correct Care of Home Furnishings" is a "book of revelations" on how to achieve charming effects in the home, and how to take proper care of home furnishings. In addition, it explains the Peck & Hills plan of securing larger selection and guaranteed quality at money-saving prices through your local dealer!

Ask your dealer to give you a signed *Card of Introduction* which admits you to any of the fourteen Peck & Hills wholesale displays. Reduced overhead for both dealer and manufacturer results in better values for you.

If you cannot visit these beautiful displays of furniture, draperies, and floor coverings, choose from our distinctive catalog in your dealer's store. If your dealer cannot give you Peck & Hills service, write us for names of dealers who can. Address our nearest house.

Peck & Hills Furniture Company, Boston, New York, Jersey City, Chicago, Philadelphia, Dallas, Denver, Oakland, Los Angeles, Fresno, Portland, Tacoma, Spokane, Seattle.

THE FAMILY'S PROBLEMS

A Home, a Car, and a Trip to Europe on One Dollar a Day

TAKEN individually, a shiny silver dollar won't buy very much nowadays, but a dollar saved every day from my husband's salary has brought us, at the end of eight years, a comfortable home, an automobile, and an educational fund of $1,100 for our small daughter. The same system of saving will take us to Europe for a vacation trip in three more years. Eventually, when old age overtakes us, it will provide a fund sufficient to care for our needs.

Our plan is simple, and surprisingly workable. We save a dollar a day for three-year periods at six per cent interest, compounded semi-annually. At the end of each third year we realize exactly $1,180.47.

For the first eighteen months of our marriage, my husband and I drifted aimlessly as far as savings were concerned. We spent my husband's modest salary of $25 a week as fast as it came in. And my "hope chest"—$1,000 I had saved from my salary before our marriage—gradually melted away without our ever knowing where it went or having anything to show for it. So at the end of the first year and a half we had, as total assets, only enough furniture to fill four rooms, though John had received a pay increase of $10 a week.

We were living in a large Mid-Western city where living expenses were very reasonable, and where most of the residents owned their own homes. Yet we had very little we could call our own. We had many hopes for the future, which included a little house, a longed-for trip to Europe, a moderately-priced automobile, an educational fund for the child we wanted, and an old-age fund. The year 1917 found us still clinging desperately to these hopes. We had begun to add qualifying words to our plans, such as "Sometime." "When our ship comes in." "When you get your next raise." And so on. Things we wanted which had once seemed just around the corner were still just around the corner, and we couldn't seem to negotiate the turn.

OTHER people were buying homes and having babies on salary checks no more generous than John's. We talked everything over and decided to get organized. We would have a budget, to check up on our outgo. This sounded very systematic, and we did make a budget. We spent a lot of time over it, and I still think it was a good budget. The trouble was with us. We were always forgetting to make entries, in spite of the neat little spaces we had ruled off to make them in. And our total expenditures had an uncanny way of turning out to be more than our income. So we gave that up, and for the next two years we continued to long for things without really trying to get them.

Then a big event took place that changed everything for us. In 1919 our daughter arrived. This was our first real responsibility and obligation, and we decided we would simply have to insure our future. That was when we decided to save on the dollar-a-day basis.

The thing we wanted most of all was our own home. So we placed seven dollars a week with a building and loan association, with a home as goal. We were through with fooling now. We were going to save a definite sum every single day.

During that first year of our reform, we were tempted many times to spend the money for some current expenses. But we gritted our teeth and hung on to that dollar a day, and pretty soon the weekly journey to the bank became a mere matter of routine, like bathing the baby every day.

At the end of the first three years, we withdrew the $1,180.47 from the bank. My husband's salary had increased, and he had been able to buy a lot, for saving by this time had become a fixed habit with us. We built an $8,000 home for a $1,000 down payment, the remainder to be paid in monthly instalments. This was a great saving for us, because these monthly payments amounted to less than the rent we had been paying, and we were getting a house in the bargain. That left us $180.47 for fixing up the grounds a little and the expenses connected with moving into our new home.

Our saving continued. In 1925 we purchased a car with our "dollar-a-day" money. And besides this we saved enough extra out of John's salary during this last three-year period to buy a radio, a piano, and a phonograph.

THIS year our plan will have realized another $1,180.47, which will remain in the bank on interest until our daughter Marjorie is ready for college. In three more years, with the $1,180.47 we will have saved, we will spend our vacation in Europe. We have also been buying insurance, but those funds come from my husband's salary, and not from the savings account.

We've got the habit now. Even if John's salary hadn't increased, we would have had most of the things we wanted. Because, though a dollar may not seem like much on a single day, there are 365 days in every year.

We hear, from those of our friends who are good enough to repeat such things to us, that our neighbors think we are facing disaster. One of my friends told me that, in spite of the fact that her husband's income is twice as large as John's, they simply can't afford the things that we have.

Possibly it would surprise these friends and neighbors to learn that every one of our so-called extravagances has been deliberately planned for and saved for. There was a chorus of "How does he do it?" from some inquisitive people when John surprised me with a lovely fur coat. It was purchased with expense money, which we allot with as much care and consideration as a conservative banker would use in making a loan. We are determined to get every cent of value out of our hard-saved money.

"They Are Hell Bent!"

By Albert Payson Terhune

PHOTO BY PIRIE MACDONALD
Albert Payson Terhune

WHEN I was seven, I was stopped in the street by a bulbous lady who was a Tower of Strength and a Pillar and several other things in the local temperance movement. This was in puritanic Springfield, Massachusetts, back in 1880; where my father was pastor of the Old First Church. Let's call the lady "Mrs. Dry." (She is dead, this forty years; so my recital cannot hurt or annoy her.) She said:

"My little man, do you drink?"

With my roving eye focused longingly on an array of pop bottles in a nearby grocery window, I murmured something which might reasonably be construed as an acceptance of any possible invitation.

"I hope you *don't* drink," she continued, "because Drink is the curse of this nation of ours. Why, here in Springfield, and right here on Maple Street, where you and I live, there are dozens of children, not yet four years old, who stagger home from grog shops every day, dead drunk."

Delighted with this inside tip as to the merry habits of my young neighbors, I hurried to my father and told him of the deplorable condition of the youth of Maple Street. I remember to this day the utter disgust in his eyes as he made answer:

"My son, temperance is a grand thing. But some of the people working for it are so carried away by their own zeal that they are more idiotically intemperate than any drunkard. Mrs. Dry is a good woman. But—well, I have lived a long time; and I never yet saw or heard of any four-year-old child who was drunk, or who knew what liquor tastes like. Neither did Mrs. Dry. Fanatics do ten times as much harm by those absurd stories as they can counteract by all their good works."

I HAVE told this somewhat insipid anecdote to forestall any like accusation. I am not a fanatic. I am not a second Mrs. Dry. I don't think I have the energy or the nobility of purpose to be a fanatic. Certainly I have not the desire to be one. If the things I am going to say in this article *seem* to savor of intemperance of thought, I can only declare at the start that I have no mission or wish to reform the world. I am not going to repeat any hearsay rumors. What I am going to tell is all first-hand and it is all true. (I am not inventing my anecdotes. They are authentic.) Nor, I think, am I a crotchety old man snarling at everything that is since my time.

With this apology, which is no apology at all, let's go:

Back in those same 1880's, St. Paul's command: "Children, obey your parents, in all things," was tenfold more in vogue than was its corollary: "Fathers, provoke not your children to anger!"

We younglings were expected to obey. When we did not, or when we transgressed any of the countless rigid Rules for Conduct, we were whaled right unmercifully —most of us—or had other severe punishment meted out to us. We were taught to respect and follow the dictates of our elders. Usually, we did so. When we didn't, we were whipped, or sent to bed or otherwise penalized.

Then, some twenty years or more ago, came the inevitable reaction. I remember it well. I read and heard everywhere the New Doctrine for bringing up children. It ran somewhat like this:

Drawings by Frances Rogers

Digitized by Google
Original from UNIVERSITY OF IOWA

"Encourage; don't drive. Let the tender young mind and the tender young impulses shape themselves as nature intended, without coercion. Don't brutalize your child by punishment. Don't seek to form his character. Let his budding Ego develop along its own heaven-directed lines. Severity may crush dawning genius. Let him find self-expression; unchecked, unpunished, unthwarted. Make him love the Good for the Good's own sake; not through fear of penalty."

All of which is sweet-sounding and beautiful and inspiring. And all of which—to my low-brow way of thinking—is about as sane as to say:

"Here is a splendid young thoroughbred colt. Let him enter a stake race tomorrow without the humiliation of carrying a jockey on his back; and, above all, without the cruelty of whip and spur and rein. His naturally fine impulses will teach him to win."

Perhaps I am wrong. Anyhow, that's how I feel about it.

TODAY'S crop of young people—"the Present Generation," as they miscall themselves—is the outcome of all those high-sounding and inspiring theories about not punishing or coercing children. They were allowed to grow up, untrammeled and unfearing. As for the outcome—well, there is difference of opinion as to that, with plenty of excited talk on both sides.

Even the most rabid evolutionists don't claim that any faintly perceptible change can be made in human nature or human physique by new conditions, until after countless generations have passed. Yet we are asked to believe that a new Youth has evolved in less than one short decade better, stronger, wiser, and, above all, more free than anything the preceding sixty centuries was able to develop.

IT IS against physiology's every rule, if nothing more. New species don't evolve in ten brief years.

No, there is nothing new in the new Youth; except that it is allowed to do things we were forbidden to do. It is the same old Youth, with the bridle off. Whether or not it is better without its restraining bridle, is one of today's most argued questions. Personally, I believe it is no better off than would be an untrained colt or unhousebroken pup.

The colt, the cur, would do a certain amount of damage to the world around them. But in the end, they themselves, not the public, would be the chief sufferers from their so-called freedom and from the asinine License they mistake for Liberty.

In the first place, their self-given name is a misnomer. They call themselves, and meekly are called by us, "the Present Generation."

They are *not* the Present Generation. They are the Next Generation. It is we—we who are between thirty and seventy—who are the true Present Generation. It is we whose checkbooks pay their bills. It is we whose mercantile houses and whose law offices and whose factories and financial marts and whose political assemblies keep the world running.

And, so long as we continue at the helm in those and in all other ways, it is we, and not they, who merit the term, "Present Generation." I have yet to hear of any overwhelming number of boys and girls of from eighteen to twenty-four who sit in Congress or in any legislature or in the Presidential Cabinet or on Supreme Court benches; or who are at the head of great law firms or manufacturing interests or wholesale or retail shops, or who are raising self-respecting families, or ruling the destinies of Wall Street.

It is we older folk who are in such jobs. We produce. They consume. It is we, not they, who are on the Firing Line. The Producer is the true and the only representative of the Present Generation. The Next Generation is merely in training to take our places when we shall fall out in the resistlessly moving procession.

Are the youngsters getting a good training for that duty? From the start they are making, are they likely to carry on our work as we wish it might be carried on? That isn't a rhetorical question. I think I know the answer. But I like to hope I am mistaken.

Everyone is interested in the kind of successor he is going to have, whether in his job or in his home or in his life. So this appraisal of the Next Generation ought to be of more than passing concern to everyone.

WE OLD-TIMERS—we from thirty to seventy—are largely what our parents and our early training made us. Childhood environment, and daily precept and example have more to do with one's later life and character than most of us may realize. We are what we are because of what was ground into us and spanked into us and lectured into us when we were young. This Next Generation, that is waiting—none too courteously—to step into our shoes, will be largely what its own childhood and youth are making it. It will be, to a big extent, what was taught it and what it saw and did and what was tolerated in it when it was at the age of character formation. That is simple logic, isn't it?

Train any animal, human or otherwise, along a certain line, and he is likely to stick more or less to that line all his life. An undisciplined puppy will grow into an undisciplined and worthless dog. An ill-broken colt will not develop into a reliable work-horse. A member of the Next Generation—!

Well, there is where opinions differ. And my own opinion may be worthless. But it is backed by much observation. That is why I venture to give it.

I watched a girl of good family take what looked like a deep draft from the silver flask a lad of her own age offered her. I had known her from the time she was six; yet it did not seem my place to correct or even criticize her; the less so, since her own father was on the same club veranda with us. She chanced to catch my eye. Perhaps she did not read therein a jocund approval of her copious swig. For presently she came over to me.

Digitized by Google
Original from UNIVERSITY OF IOWA

"You don't like to see women drink booze from flasks in public, do you?" she asked me, a shade defiantly.

"What grown women do is their own concern, not mine," I answered. "But what a kid, like yourself, does ought to be the concern of your parents. It's none of *my* business. I am a fossil, you know. When I was twenty-one, if I had flashed a hip-flask in a respectable crowd like this and had asked a well-bred girl to have a drink from it, her dad would have made all kinds of trouble for me. I should have been dropped by the fathers and mothers in her set. I shouldn't have been invited again to any house in the neighborhood. If she had taken a pull from my flask, in public—or in private, either—that would have been the end of her socially. You are luckier than we Has-Beens were."

SHE lowered her voice, glancing guiltily about to see if any of her own crowd was in earshot.

"Honestly," she said, "honestly, I can't get to liking the stuff. I've tried to, awfully hard; but it's no use. You saw me tip up that flask, just now, and hold it to my lips till Mac said, 'Hey, that's got to last us all evening!' Well, how much of it do you suppose I swallowed? Not half a teaspoonful. I kept my tongue against the opening of the flask, and made believe to swallow. Honestly!"

"But what's the idea?" I asked, sore puzzled. "If you don't like it, why did you take it? And if you only wanted a sip, why did you pretend to gorge nearly half a pint of it? What's the main idea?"

"I don't want to be guyed and I don't want to be thought a Dead One," she said, "and I don't want to be dropped by the crowd for being slow or a saint. I'm not the only one, either. I know three or four other girls who don't like the stuff any more than I do. But they'd shoot me at sunrise if I told on them. I know it only because the flask is always about as full as it was when it's passed to me after they've been drinking out of it. But I like cigarettes, now," she added optimistically. "So, maybe in a little while I'll like liquor too."

"Yes," I agreed, "there's that crumb of golden hope to cling to! And when you've got to the point where you can drink a pint of green Scotch and six or seven synthetic cocktails in an evening, you'll be safe forever from the stigma of being thought 'slow' or prudish. It's a glorious goal to strive for. How do your parents like all this?"

"They don't," she assured me. "They don't like it a little bit. But what can they do? If they don't let me be a good fellow, I'll be dropped by the crowd, and will hold down a chair in a corner while everyone else is having a good time, or I'll learn from experience that there's no place but home."

"That would be horrible!" I sympathized. "I can't imagine any fate more hideous than having to spend a whole evening home with one's family. I don't wonder you're shying from it. Of course, in my antediluvian days, home was spelled with a capital 'H.' And we dodo-birds used to have some mighty beautiful evenings there, with our own home-folk.

"BUT you've risen above all that, you Next Generationers. Booze, tobacco, petting parties, half-portion skirts—those are part of the price of making a social hit. So your parents let you do all that, for fear you'll be dropped? They've spent a good many thousand dollars launching you into the social game and getting to a place to launch you from. Naturally, they want action for their money. There are plenty of other parents in the same boat. I know lots of them myself. They don't like what their kids do. But they can't interfere without endangering their investment."

Perhaps you think this was an isolated case? Not six weeks ago a man was talking to me about his two daughters, both of them (*Continued on page 108*)

"They Are Not!"

By Harold Bell Wright

Harold Bell Wright

AN OLD sea-captain friend of my boyhood delighted to spin the following yarn:

A ship was in such dire distress that the master of the vessel called all hands to prayers. One tough old tar, instead of obeying the pious order, let three of his shipmates down into the hold, where they broached a cask of wine.

But the vessel escaped being wrecked, and when the danger was past the captain caused the reckless and impious sailor to be brought before him. "Bill," said the captain, "when I called all hands to prayers, you went and broached a cask of wine, how come?" And Tough Old Tar answered: "Well, ye see, sir, it war like this here: When you called all hands to prayers I knowed things was so bad you'd give up all hope. So I figured me and my mates might as well go to hell jolly drunk as any other way."

This story illustrates a human trait quite common to us all.

Certainly, it begins to look as though our good ship Civilization was in a perilous state. From all quarters we hear that we are doomed. Our religious sails are reported torn to tatters and our educational spars badly sprung. They say our government hull is waterlogged, and our business rigging fouled. Marriage is reported swept away, homes are gone, art and literature are overboard, society is badly stove in, and labor smashed to flinders. It would be strange indeed if, with all this, some members of the crew failed to show a spirit of recklessness.

Heaven knows, I am not unmindful of the danger I face when I rise to remark that there is another side to my old sailor friend's story. But even at the risk of being hooted down by the Pollyanna shouters, I must call attention to the fact that not all on board that ship were minded to go to hell, either jolly drunk or cold sober.

Tough Old Tar and his mates were a very small minority. It was the very unusualness and irregularity of their conduct which furnishes the point of the story. The story—quite properly from a story point of view—does not tell how the ship weathered the storm, so that no one went to hell that trip. Nor does the tale call attention to the perfectly obvious fact that the ship and all her crew were saved, not by Tough Old Tar and his drunken minority, but by the decent captain and the decent majority of his crew.

LEST you lose interest at this point, I hasten to say that I believe the worst that is reported about our young people. I doubt if there was ever in the history of our civilization a period when mere children were so experienced in those immoralties which matured men and women are supposed to spend years in learning.

And now, if my belief that our young people of today are the worst ever known qualifies me to discuss this much-discussed subject, permit me to state that I do also most emphatically believe that these "Next Generationers" are the best and most promising generation in our history. In other words, to this story also there is another side:

Without denying the truth of the appalling charges which are made against our young people, I am nevertheless convinced that in the spirit of this rebellious generation—the spirit which my generation so abhors, distrusts, and fears—is the seed of a civilization superior to any

Digitized by Google Original from UNIVERSITY OF IOWA

we have ever dreamed. I say the *seed* is there in the *spirit* of these youthful rebels. Whether or not that seed will be permitted to germinate; whether or not the young growth will receive the care and cultivation necessary to bring it to the harvest, remains to be seen.

There is a sickening amount of inane twaddle these days about sparing the rod and spoiling the child. We grouchy old dodderers stoutly opine—between drinks—that what these here young hip-flask toters and their necking partners need is to be spanked—spanked good and plenty

And I agree. When it comes to working up a grouch on this subject I yield first place to no oldster living. Every time I pass a couple in a car parked beside the road, I itch for action. I want to grab those silly young goats one by one, stretch them across my knee and whale the sap out of them. You bet I thrashed my boys. And I am training right now to try a round, or mebbe two, with my grandchildren.

But in my saner moments the question persists: How are we going to set about walloping this rebellious generation? And if we could somehow manage it, who among us is fit to do the job?

"You let Mother's lip-stick and rouge alone, you little painted hussy!"

"Son, if I catch you filling your flask from my jug again, I'll just naturally thrash the tar out of you!"

When the down-to-date mother experiences that old-fashioned yearning to apply the back of a hair brush to that section of her daughter's anatomy where it would do the most good, she would—if she were just—surrender the instrument of correction to the younger flapper and place herself in an accommodating posture. If the average modern dad were honest when he feels himself reaching for the good old hickory stick, he would pass it on to his son, with the admonition: "Lay it on good and hearty, my boy. God knows, I deserve more than *you* can give me."

I can't help wondering, too, if the rod wielded so unsparingly by our parents was so potent for righteousness, how does it happen that we are what we are? As I see it, when we oldsters point to our generation as an example of hickory-stick training, we prove conclusively that there was something wrong with that system. We can't in the same breath maintain the soundness of our generation and the rottenness of these Next Generationers without raising a laugh. If it is true that "we old-timers are largely what our parents and our early training made us" we cannot escape the conclusion that these "New Generationers" are what we, their parents, are making them.

It is said that we of *this* generation—we who are between thirty and seventy—are still running things. All right—I accept the insult.

Liquor? I have not yet heard of boys and girls operating illicit stills! The great multitude of bootleggers belong to the present, ruling generation. These respectable and often pious manufacturers and merchants who make and sell every kind of device and concoction for brewing, distilling, bottling, for carrying and mixing—do they belong to this younger generation?

We—the generation now running things—we who are at the head of affairs—we supply these boys and girls with the liquor which they use to shock our sense of morals.

When this ruling generation—we judges, prosecuting attorneys, sheriffs, police captains, policemen, prohibition officers, generals, admirals, government officials, congressmen, senators, doctors, bankers, editors, church members, authors, artists, educators and everybody else, male and female—drink in homes, clubs, hotels, offices, railway trains, restaurants and everywhere else, why, in heaven's name, should we get so "all het up" every time a fool youngster pulls his little hip-flask? Why not work up a mild shock over the real defenders of personal liberty?

This younger generation has nothing against Volstead. Why should they have? They are not confirmed old topers who must have their drink, though they go down into the shadow of death to get it. This rebellion against prohibition is a rebellion of our generation—the generation of the parents of these young people. We oldsters incited this revolt. We finance it. We manage it. We head the processions. We do the shouting. These youngsters are merely being swept along with our crowd. As children have always done, they are imitating their elders. They are doing in a spirit of play that which their parents do so seriously.

WE SHOCKED and indignant fathers should retire to the privacy of our own secret booze cellars when we engage in prayerful meditation on the hip-flask habits of our sons. Perhaps another two or three shots of hootch will help us to see the light.

Lawlessness? It is the generation now legally in power that is treating law as a joke, and making violations of law the popular and sporty thing. Is anything more natural than that youth should do the popular and the sporty thing? We oldsters are the real promoters of lawlessness. The present ruling generation's disregard for law makes the lawlessness of these youngsters look like beating a penny gum machine, in comparison to the official looting of a bank or the purchase of a seat in the Senate.

The president of a state university driving a state automobile hits up a forty-five-mile gait in a twenty-mile district, and everybody smiles. But a freshman in that same educational institution, cocking his little green hat over one ear,

Digitized by Google
Original from UNIVERSITY OF IOWA

follows in prexy's wake as long as he can keep in sight, and the smiles of the populace give way to howls about youth's reckless violation of a traffic ordinance.

Shocking—this lawlessness of these Next Generationers, huh!

The plain unvarnished truth is that we, by our grown-up lawlessness, have made our laws ridiculous. And the lawlessness of this younger generation is not so much in contempt of law as it is in mockery of our maladministration of the law. These youngsters are only making us and our law-abiding pretenses objects of their laughter.

IMMODESTY? I modestly suggest that for a change we pay attention to the underpinning of our own generation. The legs of our flapping wives, mothers, sisters, aunts—yes, and grandmothers—are not so successfully hidden under skirts of modesty. With the majority of fathers and mothers and other kin supporting and applauding nude shows, Lady Godiva parades, and undressed exhibitions of every conceivable sort, why, in the name of consistency, should we be shocked at sight of the dimples in little daughter's knees?

If you really wish to know about short skirts, parked corsets, other free exhibitions of physical charms, and immodest conversation, do not apply to these young amateurs, go straight to headquarters; consult those who originated the idea; ask the generation that is now running things.

Boys and girls are not capable of publishing those magazines which flaunt unspeakable indecencies so boldly on every street corner. Our Next Generationers are too inexperienced to create and print such masterpieces of obscenity. We—the present producing generation—manufacture this filthy stuff. We own and run the book stores and news-stands that display and sell it. We bank the dollars made from the salacious traffic. We deal for a price in printed talk which makes the frank conversation of youth, in comparison, as innocent as a baby's laughter. We sell immodesty which makes the short skirts of youth, in comparison, as pure as a nun's robe.

Mother dear should sit down in a low chair facing a long mirror when she mourns over her charming daughter's immodest exhibitions.

IMMORALITY? Do these boys and girls make our motion pictures which develop and present in revealing detail and disgusting frankness nearly every sex situation possible to human beings? Oh no, we—the moral generation that is now in control of affairs—we finance, produce, and exhibit these sex pictures. We select these sex themes. We write these sex scenarios. We direct and act these sex situations. To promote these sex pictures we devise advertising and publicity deliberately calculated to excite unhealthy sex interest in them. We own the theatres and shows and pictures.

Who writes, publishes, and sells the novels which so minutely dissect and so vividly describe every possible sex thrill? The young folks do not. They have not yet attained this superior artistic immorality of our generation. But if we persist and are patient, we shall succeed in teaching them to appreciate the real thing. In the meantime we must be satisfied if they can do no better than park their cars beside the road and make the most of shady corners.

When our boys and girls can't go into one of *our* theatres to see one of *our* plays without hearing language which stretches the limits of vulgarity and profanity, why should we be shocked when they rip out an occasional decent "damn," or an honest—"go-to-hell"? When vulgar and profane speech on the stage and in our literature wins our heartiest applause, our children certainly have a right to expect not censure but commendation for their cussing. As long as we—the present responsible generation—yield to sex-mad, self-styled intelligentsia the leadership in art and literature—popularize sex-madness in our theatres, motion-picture houses, and libraries—and broadcast through our daily papers the minute details of every reeking sex-mad horror, we should bow in humble admiration before the moral purity of this younger generation.

With my own generation trailing with all sorts of queer "little groups" after every lecturing moron and writing degenerate who preaches that indecency is conclusive proof of genius, I can't work up much steam over the amateur immorality of boys and girls.

Irreligion? And is our generation religious? True, we *call* ourselves a Christian people, but will anyone maintain that we embody in our lives the ideals and teachings of Jesus? Our government, our politics, our courts, our newspapers, our schools, our literature, our financial institutions, our mercantile establishments, our army and navy, our society, our labor—can anyone find the ideals and teachings of Jesus embodied in any of these? The irreligion of this younger generation *is* shocking, isn't it?

I wonder, if these boys and girls should wish to try Christianity as they are trying everything else, where would they find a genuine, unadulterated sample of it? They could find theories, beliefs, professions; but where could they see the thing itself in operation?

These young people are revolting against religious sham and hypocrisy and the substitution of denominational machinery and church self-interest for the Christianity of Jesus.

REVOLTS against religion are never born of *religion*, they are born of priestcraft and ecclesiasticism. By substituting denominational dogmas for the teachings and ideals of Jesus, and supplanting the spirit of Christianity by the self-seeking intolerance of competitive church bodies, the church people themselves have driven the younger generation to revolt. These rebellious young people are simply declining to accept our self-opinionated church dignitaries at their own valuation, and are refusing to acknowledge the authority of a church which is in a state of continuous revolt against itself.

We church people may fool a few savages in far-away heathen lands with our pretentions to Christianity, but we can't fool modern Young America. The poor savage knows only what our missionaries say about us. These boys and girls of ours know us as we are.

Parental authority? Children are not rebelling against parental authority, because there is no such thing! Our generation—we, their parents, arranged *that*.

Home influence?

Our generation offers practically no home influence for our children to revolt against.

This younger generation, in fact, is no wilder than our own generation—and we, in our hearts, know it. But these youngsters are exhibiting their wildness, while we oldsters are concealing ours with the greatest caution. They are discussing boldly and doing openly the same things which we talk about in whispers and do under cover. If only they would do as we do, hide their sins and pretend to virtues which they have not, we would be happier. But they won't hide anything, because we not only removed any necessity for secrecy when we removed their fear of parental (*Continued on page 105*)

CHASE OSBORN

The Iron Hunter

He loves life, grapples eagerly with it, wrested from it many of the things he wanted and then gave them back

By Webb Waldron

TODAY this man may be sitting in a log cabin in the North Woods discussing the habits of the beaver with an old Ojibway chief. Tomorrow or the next day he may be explaining to the engineering department of a Mid-Western university his astonishing new device for transcontinental traffic by means of vacuum tubes.

A day or so after that he may be in New York, consulting with a group of internationally-known mining engineers regarding an iron mine he has discovered in Madagascar.

That night he will dine perhaps up in Harlem with the family of a Bulgarian waiter, will listen to the Bulgarian's eleven-year-old son Boris play Rachmaninoff's Prelude, and then will astonish and delight the whole family by making antic faces, barking like a dog, yowling like a catamount, and telling stories of chimpanzees and giraffes.

The next day may see him out in the Saugatuck Hills of Connecticut discussing the art of charcoal-burning with a Yankee farmer.

A day or so later he will be back, perhaps, on his island in the North Woods calling down the blessing from the Great Spirit upon a newly wedded Indian and his bride.

Or in Chicago lecturing to a woman's club on American frontier history. Or working on his new book about earthquakes. Or cajoling the bankers of his home town in Michigan to finance the new hotel. Or thrilling a railway president's dinner table with tales of African lion hunting. Or enlightening a college president upon the secrets of woodcraft. Or—

A million and one other things.

If this man, Chase Osborn, were half as interesting as he is, if he had half as many facets of genius, if he had knowledge of half the things which he does expertly know, if he had half of his own magnetism and force of character and energy, he would be easier to depict. As it is, the job is just about impossible.

Above all, he is an individual. He is an unmistakable figure in a crowd. A big man, with a shrewd, kindly face, seamed by exposure, weathered to old walnut, a pugnacious jaw, iron-gray hair, deep-set, piercing, dark brown eyes, a man with a rollicking laugh and biting wit. Once I saw him in a group of his Indians on his island in the St. Mary's River, and I would have sworn, had I not known differently, that he was their authentic chief of the blood.

From childhood, Chase Osborn has been an individual. He has always done things in his own way, sometimes a very astonishing way. As a boy of ten, in Lafayette, Indiana, he was pestered on his paper route by a gang of toughs who tried to steal his papers. So little ten-year-old Chase went to a second-hand dealer, bought an old seven-shot revolver, and when the gang chased him the next night, got him cornered, and a big bully had knocked him down with a shinny stick, Chase pulled the gun, and fired all seven shots slam-bang into the crowd!

"I expected to kill seven boys anyhow, maybe more," he says. "Luckily, I didn't hit any. Just then a cop came along, grabbed me, and took the gun away from me. I thought he was going to take me to jail, but he only took me home. I wouldn't recommend those tactics to any other boy, but you bet I wasn't bothered on my paper route after that!"

When he was twelve, Chase ran away from home, walked two hundred miles up into the woods of Michigan, got a job as cookee in a lumber camp, and walked back home the next spring with over one hundred dollars in his pocket.

Chase's family was poor, and he was avid for education. At fourteen he got admitted somehow into Purdue, a college which had just been started in his home town. "We Osborn children never had many clothes," he says. "Coats and pants were passed on from brother to brother, and mean kids made fun of our clothes. When I started in at Purdue, a big bully named Jim, son of a rich banker, had a habit of pointing me out when there was a crowd around, and saying, 'Look at that fellow Osborn, he hasn't any underclothes or any socks! And what do you think of wearing cowhide boots to college?' I hated him like poison, and I envied him too. I'd have licked him if I could, but he was too big. I didn't dream then that some day I would be instrumental in getting Jim out of jail."

BUT in spite of Chase's lack of clothes, the spirit of fun in him was not quenched, and he gives a vivid picture of the youth of Indiana in those days.

"We played games and kissed like the dickens," his memory runs, in a letter to Mark Sullivan. "Modern

(*Continued on page 150*)

My Philosophy of Life

MY GREATEST inheritance was poverty. With poverty came gibes and slurs from children who had more. It made me bitter for years. But it stimulated me to do things, for poverty is ambition's stepladder. With the acquisition of some money and enough food and respectable clothing came reflection. I saw the earth as a vast banqueting table. Sort of a buffet or what the Scandinavians call a *smorgos* board. This table is laden with the nourishments and the spices and flavors of life. Some persons, I noted, were rudely pushing weaker ones away and hogging the good things, even the actual food in instances. There is enough to go 'round if all would take only a fair share. But with some taking more even than they could eat and hoarding it, others had to go hungry.

I made up my mind to give back whatever I had that I did not need to live upon. People who take more than they need from the table of the earth do not always know that they are pigs, but they are. Socialism will not cure the pig habit. The way out is for those who take more to consider themselves as trustees for the surplus. Maybe some day they will help others up to the table, where they can help themselves. That day of things is coming rapidly. It must not be called charity. The name for it is JUSTICE. Add to it human love, and the world is made safe and happy for all mankind. CHASE SALMON OSBORN.

From a Painting by Robert W. Grafton

CHASE SALMON OSBORN, former governor of Michigan, has hunted for iron—and found it—all over the world; he has owned and edited several newspapers, and by his personal courage he cleaned up some of the toughest mining camps; he is a writer on birds, earthquakes, the source of the firefly's light; and is the author of a wide variety of books, among them, "The Andean Land," "The Iron Hunter," "The Law of Divine Concord," "The Earth Upsets," and "Madagascar—the Land of the Man-Eating Tree." . . . There is practically no limit to the strength of this amazing man, and there is no limit to the range of his interests! . . . Governor Osborn was born in Indiana in 1860. His official home is in Sault Ste. Marie, Michigan, his summer home on an island in St. Mary's River, and his winter home, "Possum Poke," is in Georgia.

WHITE BIRCHES

A story

By Nelia Gardner White

ILLUSTRATED BY HANSON BOOTH

THIS story is only of one day, and yet there must have been a myriad of happenings that were *of* the day before the day itself came. No one can say of anything, "It happened on such and such an afternoon or morning."

Nan had been bred in that sterile poverty which has not even laughter to mitigate its raggedness. Their house, on River Street, had no grass in its littered yard. No geraniums to ease the gray blank of its curtainless windows. No great friendly maple to hide the rusty three-wheeled wagon left to rot by the muddy driveway. No wire to keep scrawny chickens from running across the sagging porch.

Oh, yes, they had a phonograph, and a hammock, and a rack full of guns, and a rafter that balanced a half-dozen fish poles! She came from that sort of home, on River Street. There was always a good deal of noise there—a kind of shrill cackling and fishwife nagging and meaningless scolding.

I won't say that Nan was any better than the rest, that she had any mighty suppressed longings for higher things. She had a cheap prettiness that was made cheaper yet by the exaggerated crimp in her mop of fair hair. She went with her sisters to the dances at the town hall on Saturday nights, and sometimes one boy would bring her home, sometimes another. She was "one of those Ramer girls."

But, three different times, she had tried to patch up the chicken yard fence. And one day, when her father had let his job go because he wanted a day off to go hunting, she watched him cross the bridge, gun on shoulder, with a hot scorn in her too-wise gray eyes. There were moments when she saw her silly clothes for what they were, and could have torn them from her. After such moments she would go off with Ed Bullock to the "Green Mill"—a road-house down Burns way—and dance, and laugh her shrill laughter till near morning. But probably her sisters had moments like that, too.

And then one night, the Grangers had a dance in the hall, and she went. Mark Wainwright was there. Perhaps her high laughter, to him who worked long days alone, was young laughter. Or perhaps, one moment when she stood a little apart staring about the room with strange and wistful groping, he saw her eyes. At any rate he took her home, and Nan's sisters referred to him as "Nan's hick friend."

Toward spring she married Mark. Partly because he thought her beautiful, partly because she was so sick of the noise that filled their poor house, partly because he took her buggy-riding one night, and had been afraid to kiss her.

But, of course, one of the Ramer girls—born in that River Street house, working in the ice-cream store—had no conception of what it would mean to be the wife of Mark Wainwright. He had a small farm up Ellis Run, an out-of-the-way road, and lonely. His folks had both died the year before and he had kept things going the best he could since. The house was not bad. A little gray and shabby, but comfortable, and he had the barn in good shape. They had a chance there.

The first year went pretty well. He loved her so, you see. And that was bound to soften her, whether she would or no. And something that had long smoldered before the unkemptness of her own house, grew comforted and still at the tidiness of Mark's house. There was a cupboard up-stairs that had in it fourteen sheets and thirteen pairs of pillow cases and two shelves full of "extra" comforters. There were plenty of flannel sheets for winter, and there was a crocheted spread for the spare-room bed. One day, in an old bureau drawer, she found a pile of dresser scarfs embroidered in wild roses, with butterfly filet insets, and great "W's" worked painstakingly.

And there was old Mrs. Wainwright's "best set" of dishes. They were blue, and had been her mother's. It gave Nan a strange, unexplored satisfaction to see that shelf full of dishes every time she opened the cupboard door in the pantry. There was a little rosebud pitcher, too, and even the kitchen had curtains. Mark was as handy about washing dishes as a woman, and Nan used to laugh at him as he made his tidy stack in the dishpan and worked up such a hot sudsy foam. She both scorned and liked him when he did the dishes for her. She was not much on cooking, but he helped her and they made out—at first.

BUT you can see that Mark's folks would not think much of Nan—a careless, loud girl like Nan. They made her an intruder. It took a little more than a year for them to do it. Then her sisters came up and ate the good food that now seemed to Nan to have been always hers, and talked of parties and "the fellas." They made fun in cruel ways, of Nan's new estate, of the old-fashioned house, of Mark. They made it all, by their high laughter, a dull, dreary place and Nan a fool for having given up her job at the ice-cream parlor for it. Nan had set out some plants that day, and she felt silly, after her sisters went, for having done it.

After the year, she began to have differences with Mark. They weren't the differences you would, perhaps, have supposed. They never quarreled over the hard work or the patronage of the "in-laws." You would have expected that. They did not even quarrel about the loneliness which was to eat into Nan more and more bitterly through the years. This was their first quarrel.

Mark came in from milking one day—it was his birthday—and found Nan more really gay than usual. She had a clean apron on; she seldom had. There was a cake; her cakes weren't much to boast of, but it was a cake. And beside Mark's plate was a package. In the package was a tie. Mark was pleased. He brought his long, awkward figure around the table and ruffled her hair, as he did when most moved.

"Bet you don't know where I got the money for it," she triumphed. "Mr. Bundy give me pay for two dozen eggs extra by mistake! You can bet I didn't say anything—I'd been wanting to get you something!"

Mark was back in his place now, and his eyes came up quickly, lifting his bushy brows in a startled fashion.

"Huh?" he said.

AND Nan felt as she had used to when she realized the awful cheapness of her clothes. Only, now, she knew the cheapness to be within herself. Hot words came crowding, but he only looked at her in that strange, unbelieving way. That was their first quarrel, if you could call it that.

"I meant it all right; I meant it all right!" she would say to herself as she looked away from the dishes to the little clump of birches down by the knoll.

Nan did not make that mistake again, not just that. But it became known that an old aunt of Mark's had willed her little savings to Mark and a cousin. The cousin came one day when Mark was out, and made a suggestion as to how he and Mark might get hold of the money before Aunt Tilda died.

Mark had been wanting a new reaper, and Nan said to him, nothing in her rebelling at its utterance, "I know how you can get the reaper, Mark!"

Again that look that left her unprotected, left naked her impoverished soul.

"What do you think I am?" he asked shortly.

So it grew. Grew till Nan knew, in a terrified way, that she was alone in the house. And so was Mark alone. The trouble was, Nan had no way of telling him she was ashamed, and he had no way of divination. Once, when Fred Overhiser gave her a nickel too much for some spring

Digitized by Google
Original from UNIVERSITY OF IOWA

chickens, she walked up to his house with the nickel—three miles. But Mark did not know that.

After a while, the thing grew bigger, fed by such little things as Nan's burning up an old shirt she didn't want to mend again; by Mark's silent scorn when she wanted to pretend she was not home one day when they saw an unloved relative driving in; by Nan's lying about a trip to town she had taken. The difficulty was, after a bit, that Mark couldn't see that she recognized each episode as important.

That trip to town—he had gone away and had told her not to drive the horse he had left behind. Her mother had been ill, and she had just gone. In the first year she would have told him; but now she couldn't. She felt that she had done him an injury by taking the horse, and she did not see how she was adding to it immeasurably by the deception. The pity was, he would have understood that, if she had told him.

In their case it was this big difference that separated finally into smaller differences. Brought up in noise and to the clatter of dishes in the ice-cream parlor, she began to see the farm as a lonely place. In the first days, Mark had wanted her to come down to the hay field and ride in with him on the load. Or, when he went after the cows, he would want to find her by the bars at the end of the lane when he got back. And it had been sweet to Nan.

But he stopped it after he began to know her. It did not occur to him that, after each offense, Nan never offended in just that way again. He did not realize that she had had no standards, and was groping bravely after one, finding it only in himself. He only knew that he, son of farmers and Methodist parsons, felt sick inside to know that she would stoop to things he, lax enough, scorned.

So she knew loneliness. And Ellis Run is a very lonely place if you are hankering for people. Not a house in sight from Wainwright's—only an old watering trough, rarely used now, and the mail box. Down the road a piece was a knoll covered with birch trees. Mark had never cut the birches, not because, perhaps, he saw each tree slim, white, drawn apart shyly from the rest in its virginity, but because he thought them "kind of pretty."

And Nan, with this thing between them, no longer felt interest in Mark's interests. She hated the farm. She hated his cousins, interfering and peering into chests to see if she'd put moth balls in. She hated the stony pastures, and the days with never a human face in them. She even hated the neatness that generations of women before her had put upon her as a duty. She began to want people, her own sort of people. She did not know—probably would not have admitted, anyway—that it was her own growth which was stirring her into miserable, lonely feeling.

ONE day Mark had a chance to sell a horse that had been ailing.

"I suppose you'd say go ahead!" he said a little sharply to Nan.

She did not answer him, but after he went out again she went in by the stove in the sitting-room and cried bitterly. She said things about his Aunt Julia that night—biting, true, unlovely things—and he could not see that they were only a child's defiance (she, back to the wall, fighting injustice!). So he said things about her shiftless father and her loud sisters: "Talk of the town, they are—and ought to be!"

Winter days grew hideously long. Mark, grown tight-mouthed and old—a stranger to her—the heavy snows, and the absence of contact with life; you can think what they would be to one of the Ramer girls. Mark thought the snow was pretty. He would walk to town to go past a certain woods, and he liked to be snowed-in, to spend days by the kitchen stove with papers and books.

But Nan, who had known home always as a place to get away from when possible, had not developed yet to where she could find peace in just sitting by the fire. Especially not alone. Sometimes, when she would walk across the kitchen, the creak of the boards would be so loud in the stillness of Ellis Run that she would want to scream aloud. The stillness and snow were like weights on her.

When he went after the cows, he would want to find her by the bars at the end of the lane when he got back

Her cheap gayety, that had, in the crucible of love, been coming through as real, was now pushed back into her, leaving her only queerly out of place there on the farm. More than once she thought, "If only I hadn't done that about the tie!" Not knowing that that thought alone made her more than the girl who had married Mark.

There were no babies, and that troubled Mark too. One day Nan realized, settling her shoulders as if to a new burden, that Mark thought she did not want any. She was too far away from him now to tell him the difference. Nothing so fosters a reserve as silence after quarrels.

There was a little kitten that strayed there, and Nan fussed over it in an awkward way, fattened it up with cream, and held it in her lap whenever she sat down.

When the little kitten was killed by a passing car she shook all over, and she did not eat much for a week or two after; but Mark could not

Digitized by Google Original from UNIVERSITY OF IOWA

Aunt Julia was a fault-finding woman. She snooped everywhere—cupboards, cellar, bureau drawers, thoughts

be expected to read that, of course.

Then, early one spring, Lute Lory drove in in his yellow wagon and stopped at the kitchen door. Lute drove what was known as "the tea wagon," but he sold a hundred different commodities. He had not been in the habit of coming up Ellis Run, but Nan had used to know him in town. His surprise promptly bound them together in friendliness.

"Why, Nancy Ramer! Where in time'd you hail from? Prettier'n ever, too!"

He was used to saying whatever came into his head to the folks along the route. If a girl blushed, so much the better; but, if she didn't, 'twas all in the day's work. He could not know that the easy boldness of his voice was like a rope thrown out across the years from her old life to this. But he did see the feeling come flooding into her face, and he repeated the statement in his own mind.

"Prettier is right!"

"I saw your sister 'Relia, down to a dance Saturday night," he told her.

"Did you? Who was she with?"

"Ed Bullock—guess she ain't ready to settle down yet. They got a good orchestra now."

"Gee!" The longing and regret in her voice got through to Lute even.

"'S'matter, Nancy? Don't Wainwright take you to dances any more?"

Nan hesitated. Loyalty had not been fostered in the River Street house, but Nan was not Nan Ramer now.

"We been awful busy getting the farm to paying," she defended Mark.

But he had seen the longing that flew up into her eyes and made her a girl again.

LUTE never went over a route more than once a month, but two weeks later there he was at the kitchen door again.

"'Lo, Nancy!" he grinned at her, as if they had some secret between them. Nan found herself flushing, as if he were right.

"How about tea or coffee today? Got plenty? I saw 'Relia Saturday night; told her I saw you. She says you ain't much time for the family nowadays!"

Nan did not answer directly.

"She oughtn't to run around with Ed Bullock," she said. "He's no good."

"Oh, 'Relia can look after herself!" he said easily. "How about some vanilla, Nancy? I got some new cup-cake tins on today, too."

"I'm not much on cake baking," Nan's voice was both resentful and wistful.

"Well, you're long on looks, anyhow; guess Mark won't mind a fallen cake now 'n' then!" He laughed loudly.

His laugh was somehow distasteful to Nan, though it was the identical laugh which had made her glow in the days of the ice-cream parlor. But it linked her up with her old life, and to be linked to anything, anyone, was a blessed, comforting feeling. (*Continued on page 167*)

"Doc" Kinkade—*The Man Who Put Us Across*

By Commander Richard E. Byrd, U. S. N.

INTERNATIONAL NEWSREEL

"Doc" Kinkade, motor wizard of the Wright Aëronautical Corporation, is the man who tuned the engines that carried Lindbergh, Chamberlin, Byrd, and Ruth Elder on their historical flights across the sea. His flyers keep him busy chasing around after them to see that their motors are in perfect order. R. Harold Kinkade is the official name of this mechanical genius, but to the flyers he is "Doc"

ON THE morning of May 8th, 1925, a man asked me a question that for a moment made me think hard. We were standing on the long white snow slope that led from the berg-filled waters of King's Bay, Spitzbergen, up to the ice-capped mountains of that country's wild and inaccessible interior. We were waiting for a chance to hop off by plane for the North Pole.

The man who asked me the question was Floyd Bennett. He was to be my companion on the flight. He knew, as well as I, that we were taking a big chance. But he faced the danger simply, and with assurance that we were going to do the best we could. Like the sensible fellow he is, he wanted to feel that every detail in our preparation was complete.

The momentous question Floyd Bennett put to me was: "Do you think we're fixed for getting back in case we crash?"

Sounded simple enough on the face of it. But it stood for one of the most complex problems I have ever tackled. By it Bennett referred to the possibility that we might be forced to land on the chaotic surface of the great polar pack. We knew that there wasn't a chance in a thousand that we could do this without smashing our landing skis, if not our plane as well.

If we did this we should have to walk back over the ice. Without dogs or sledges or proper field equipment, we should have to attempt the journey that Peary succeeded in making only after twenty-five years of learning how to travel on sea ice. We should starve and freeze, and fall from exhaustion before we were through. And we'd probably be "through" long before we got back to land.

I CONFESS I didn't like to have to answer Bennett's question, although for many months I had been planning just how to meet that very situation. Then chance answered it for me.

In front of us was the huge tri-motored monoplane that was going to take us North. From her belly suddenly emerged the stocky figure of a man clad in oil-soaked work clothes and with an old bedraggled teamster's cap pulled down over his ears and eyes. He had broad shoulders, a square chin, a hard, straight line of a mouth, quick eyes, and a sort of *leaning-forward* look about his body, as if he were always poised to spring. He was the personification of hard work, energy, earnestness, and grit.

"There's the answer to your question, Floyd!" I exclaimed.

Bennett looked up. "Who, Doc Kinkade?"

"Sure. He's the one who is going to keep us from walking back." But as I said this, I did not for a moment forget that Bennett's own mechanical ability is still unsurpassed, so far as I know.

Kinkade, airplane motor wizard, came over to where we stood. Nodding in the direction of the three big engines, upon the performance of which Bennett and I must in a few hours stake our lives, he said: "They'll do."

It was characteristic of the man that he went into no ingenious details that might have become potential alibis for him in case his engines failed us. Oh, no. Doc Kinkade, motor wizard, is not like that. If one of his engines is wrong, he shuts his teeth tightly and growls through his nose. If they are in shape to run sweetly hour after hour through fog and gale and blizzard, sleet and heat and darkness, he just says: "*They'll do.*"

When Doc Kinkade says this you go right out without another thought and bet your life that he's right. Lindbergh

Digitized by Google
Original from UNIVERSITY OF IOWA

did last summer. Chamberlin did. Ruth Elder did. I did.

How preposterous it is that this man, who has been one of those largely responsible for the spectacular spread and improvement in flying machines all over the civilized world in the year 1926, is one of the obscure figures in aviation.

Indeed, it is a sad commentary on modern society that this man of all flying men, who is known to his friends as modest, retiring, reliable, intelligent, tireless, tenacious, and talented yet should receive none of the flood of adulation poured upon other successful flyers.

Two comforting facts about him are plain to the discerning eye: In the first place, I believe that Kinkade has a recompense for his work that few have, certainly to the degree he has it: a feeling of satisfaction that, had he not been absolutely right about his engines when he said "They'll do," Lindbergh, Chamberlin, and myself might now be dead.

Secondly, he has daily reminders, both from his employers and from his many friends among flyers, that he is looked upon as one of the great practical masters of airplane motors alive to-day.

IF a man knows his work is good, and those who understand his work agree that it is good, I believe that he has two of the greatest mainsprings of happiness in life.

I had for so long thought of R. Harold Kinkade in terms of fuel efficiency, revolutions-per-minute, and miles-per-hour, that when I decided the world ought to know him more and appreciate him better, I actually had to go and ask where he was born and when.

"Abroad," he replied. "But not an actual 'furriner.' My father, an American citizen, was in Richmond, Canada, on business for an American oil company when I came along. Not long afterward we returned to the States and settled in Bayonne, New Jersey. I might say I grew up in an atmosphere of lubricating oil.

"I went to grammar school and was graduated from the Lincoln Public School, in Bayonne. I didn't do anything out of the ordinary to indicate whether I was to be doctor, lawyer, merchant, or thief when I grew up. Guess I had the usual number of fist fights and lost my tops down the sewer just about like any other public-school boy."

"Are you sure there wasn't something happened in those days that proved you were going to be a great motor mechanic when you grew up?"

An editorial friend who is used to doing interviews had told me that it was very important to dig out of one's victim some little revealing incident in childhood that was prophetic of the man's future greatness.

Doc's reply was revealing enough: It was, "Hey, quit your kidding!"

But I kept after him, because this was a point I had to get. Finally, he told me the following perfect sample of what I wanted:

"Yes; I guess there was one time I showed an interest in mechanical things. I went to Sunday-school for some years. Not that I had exactly a religious turn of mind, but I liked the atmosphere of the place, and I soon found that I had there an even better chance to exercise my wits than I did in school. I guess few of us realize the kick a boy gets out of mental competition with other boys.

"Well, one day the teacher offered a prize of one dollar for learning the names of all the books of the Bible by memory. I was twelve years old at the time. I spent the whole following week memorizing the hardest set of words I have ever wrapped my tongue around. When Sunday came I got my dollar.

"I could hardly wait for Monday morning to spend it. I knew exactly what I wanted. For years I had been seeing clocks and watches around the house and hearing the mysterious ticking inside their cases. *I had a burning desire to know what made the wheels go around.*

"With my dollar I bought a watch and hurried home with it. Using scissors, screw driver, hammer, nail file, penknife, and a safety pin, I promptly took the watch to pieces. I doubt if I ever had another thrill like the one I had when I saw all the little wheels and cogs lying around on the handkerchief I had spread on the table to keep them from getting dirty.

"NOW comes what I think is the wonderful part of the story. At any rate, I am pretty proud to think of it. I put that whole blooming watch back together again. *And it worked!*

"I was so excited at my achievement that next day I took the watch apart again and put it together again. Again it worked. I know most boys sooner or later take a watch apart, but mighty few of them ever make it tick again.

"This time my father learned what I was doing with my new timepiece. He was so disgusted at what to him seemed my vandalism that he took the watch away from me."

I doubt if Kinkade ever showed the enthusiasm over an airplane engine that he did in reciting his adventure with that dollar watch. Certainly, nothing could have been more revealing of his early bent toward mechanical ability.

"I graduated from the watch to the family alarm clock," he went on. "The trouble here was that when I got all the alarm clock's works out on the table I couldn't quite face the same old experience of simply putting them back, and making them tick again. So, this time I built a little motor-boat, put the clock works in it and ran it in the family tub.

"Nor is this the end of the yarn. The other boys in the neighborhood came in to see if what I told them about my wonderful motor-boat was true. When one of them saw how it worked, he couldn't resist making me an offer for it. I sold it to him for enough to buy two more alarm clocks.

"This piece of business saved my hide for having destroyed the alarm clock. But it also revealed to my parents that I might be of some real use at home. My mother put me to work doing odd plumbing jobs about the house. I did them, and managed to save a few plumbing bills. But I never put into that work the same enthusiasm I had in unscrambling clock works; first, because even then my taste ran to small and delicate mechanical parts; and, second, because no boy will ever work so hard at a job he *has* to do as at one he devises himself."

I PESTERED Doc with questions about his schooling, and about what he did in those years outside of school, for a very definite reason. I am convinced that the youth of this country is our most important public charge. The way we educate and bring up our boys and girls of to-day determines almost wholly what kind of country we are going to have fifteen or twenty years from to-day.

Nothing is more fascinating than to find out what influences helped men like Kinkade in their youth, and make for their future success.

"I found a valuable friend in my last school-teacher," he said. "Her name was Miss Allen, and she did a lot for me when I went to her frankly one day and said that I didn't think my folks could afford to send me all the way through high school, and that I'd have to go to work and make my own living pretty soon.

"'All right,' she said encouragingly. 'You go right to work in some automobile factory, Harold. That's an industry which has a great future in this country.'

"If she'd badgered me to keep on, and told me what a failure I'd be without more education just then, I wouldn't have listened to her. But she saw that I was in a fix I couldn't help, and gave me advice that is pretty much responsible for where I am to-day. As a matter of fact, I was later able to (*Continued on page 86*)

It Is a Pleasure To Grant a Favor Such as This

WHEN Commander Byrd sent in the accompanying article he asked what he termed a "favor." Here it is: "Would THE AMERICAN MAGAZINE," he said, "be willing to run an editorial box in the middle of the story, pointing out that, despite the great progress in aviation and the fine records of many flyers, the real men behind all this success—the men who put the engines in commission—have never received their full due?" We are glad to carry out this generous and justified suggestion. THE EDITOR.

He found himself wishing that he needn't ever see either of them again

Illustrated by Victor C. Anderson

VISIBLY, neither of the Telfer brothers enjoyed the dismal, grating slither of steel against wet sandstone. Nathan, the elder, who held the mower knives down upon the grindstone, had drawn his lips flatly back from his strong, uneven teeth, white as a dog's in the sun-brown of his sweating countenance; his eyes, even in the tempered dimness of the tool shed, where motes danced deliberately in the vertical slices of light that slipped between the wall boards, were held half shut in their habitual squint, so that he seemed to find a dull, secret amusement in the task, pausing now and then to test the edge of the flat, triangular knife teeth with a huge thumb, glistening, and discolored by the gritty water that dripped from the paint pail swung above the stone.

In these pauses his narrowed glance would shift to Jamie, perched gingerly on the one-legged stool, swaying forward and back in time to the slow revolutions of the handle. The boy's face was fortified against the sound by an intense, unhappy pucker which gathered his lips like a drawn purse string, and seemed even to lengthen and sharpen his nose.

In spite of this defense, however, the wet, jarring scrape of the blades sent a recurrent, involuntary shudder through his tightened neck and shoulders, and his eyes clung jealously to his brother's experimenting thumb, marking the slow progress from knife to knife.

Nathan Telfer chuckled, not unkindly, at the look on the boy's curdled face.

"Sets all your teeth right up on edge, don't it? Mine too. Been doing it ever since I can remember; but it tickles me up just the same as the first time I turned the stone for Pa." He chuckled again. "Remember Pa always used to say it was a sight better'n having your nose against it."

THE boy's head and shoulder shivered at the thought, and Nathan Telfer's grin softened to penitence.

"Kind of mean to put the notion in your head," he said. "Always used to give me a kind of shiver when Pa'd say it." His face darkened. "Ain't much to laugh at, either. Nothing so dog-gone funny about having your nose against a grindstone. Guess Pa never got his off it all his life. You can't, if you aim to stay alive on a one-horse farm."

Dourly, now, he resumed his task; the hint of humor was gone from his tight-lipped grin, and the steel bore down harder on the dripping stone; the narrowed glance studied the square of sky framed by the doorway with an effect of wary calculation.

"Guess the shower's going 'round through the Notch, after all. Get that last piece cut before sundown, if we hustle and the old machine don't break down on us."

"Aren't you going up to town, then?"

The boy's speech had a different quality, the syllables a little more defined, a neater diction than his brother's; there was a dimly plaintive note in the tone.

"Ought to know I can't." Nathan Telfer spoke bruskly, but without rebuke. "Got to finish haying while the weather'll leave me. Never heard of such a fool time to have the Chautauqua—right bang in the middle of haying!"

"Have to take it when you can get it," said Jamie. He swayed at the crank for a few turns. "It's a lecture this afternoon: 'Hitch your wagon to a star.'" He drew in a wistful breath. "They say it's 'most as good as Bryan's speeches."

Nathan Telfer's eye appraised the retreating thunderhead. A dogged look soured his mouth.

"You'd ought to hear it, f'r a fact," he

GRINDSTONED

The story of a man who hitched his brother's wagon to a star, and of the girl they both loved

By Hugh MacNair Kahler

said. "Sight sooner have you hanker f'r something sensible, like that, 'stead of wasting your time on bell-ringers and such stuff. Promised your ma, too—" He meditated, thumbing the edge of the last blade. "You could cut across lots and catch a ride up to town with the Haddens. Guess I can make out to get along single-handed."

HE CHECKED the boy's eager movement toward the door. "Got plenty of time to clean up," he said. "Might wear that there new neck-tie I bought over to Union—one with the white spots. Hold on a minute, Jamie—ain't finished talking yet. Want"—he hesitated—"want you to listen real close. Might learn something 't'll help—" Again, fumbling for words, he paused, his glance shifting, as if for inspiration, about the clutter of the tool shed. Suddenly it brightened:

"Don't need to grow up to be like me, Jamie. You're smart. Guess you heired your ma's brains. Had my nose rammed down on the grindstone ever since I c'n remember; but you c'n keep yours off it, if you're a-mind to."

The boy's lips puckered, and again a reminiscent shiver moved his head and shoulders. Without words, however, he turned and ran toward the house. By the time Nathan Telfer had carried the sharpened knife up the hill meadow and hitched his team to the machine that stood in the curing grass of the last morning swath, Jamie was in view again, almost across the pasture lot beside the Hadden farmstead.

Nathan saw him climb the snake fence; presently, stopping the machine to clear the knives of the trailing pea-vines which, wanting Jamie's collaboration with a pitchfork, clogged the mower's teeth every few rods, he saw the Hadden democrat-wagon pull up the slope and vanish over the crest of the hill. It was a long way off, but Nathan Telfer's eyes were schooled to distance and he grinned contentedly at what they saw: Jamie was on the back seat with Milly Hadden.

It was slow work; he kept doggedly at it till well after sundown, finishing the last swath with knives so dull that they sawed instead of cutting.

When he had finished with it, and with his routine of chores, he was too tired to bother with cooking, and supped on bread and milk, nodding over the cracked blue bowl. Jamie, returning from the evening session of the Chautauqua, found him asleep in the hammock-chair on the porch, and he yawned now and then during the boy's eager rehearsal of the afternoon's oratory, although, even at seventeen, Jamie had a platform sonority that was almost professional.

"Hitch your wagon to a star." Nathan repeated the resounding climax under his breath. "That's what you'll be doing, Jamie, if you keep it up. Sight better 'n hitching up to them two old mares, the way I got to, first thing in the morning." He slowly flexed his lean arms. "Noticed you was on the back seat with Milly."

The wet, jarring scrape of the blades sent a recurrent, involuntary shudder through the boy's tightened neck and shoulders

UNIVERSITY OF IOWA

"Uh-huh." Jamie's fluency forsook him abruptly. He moved toward the door.

In the darkness Nathan Telfer grinned contentedly. The boy's reserve on this topic was more expressive and reassuring than words. Of course they were nothing but kids, and a lot of things might happen before they grew up; but it didn't hurt anything, if you were going to ride behind yoked stars, to be good friends with a girl like Milly Hadden.

"Been studying things out to-night," he said. "Guess, if we don't run into bad luck, we can make out f'r you to go to college, come fall."

Jamie said nothing, but Nathan heard him catch in his breath, and again, under cover of the darkness, he grinned sleepily at the future.

STANDING on the battered planks of the station platform, Jamie Telfer submitted himself, smiling a little, to his brother's deliberate, appraising gaze. Nathan wore his working clothes, and his team—still ponderously disturbed by the sound of the departing train—was hitched to the heavy lumber wagon; Nathan explained this a little apologetically, while his eyes were still intent upon their inventory.

"Got to haul a load of feed down from the mill," he said. "Figured you'd just as soon ride home in the wagon."

Jamie spread his hands. "Why not?" he said easily. "Didn't need to drive clear up here to meet me, for that matter. Haven't forgotten how to walk, Nat."

"Figured it'd save time to get your trunk now. Have to make a trip after it sometime." Nathan's eye shifted along the platform to the four-wheeled truck on which Charlie Greider was pulling the day's express toward the station. "Don't seem to 've got here, though," he added.

"I didn't bring it," said Jamie shortly. "It didn't seem worth while for a couple of days; and that's all I can stay, this trip."

His voice, carefully casual, held an undertone of suppressed excitement. The eagerness of his face, that always made Nathan Telfer think of Hattie, his mother, became now more manifest than ever.

"That so?" Nathan spoke slowly. "Got to go back, have you?"

"Really ought to have stayed. Just came home to explain things to you." Jamie's voice warmed. "Please you better than it pleased me, or I miss my guess; but I wanted to be sure you realized. Heard me talk about Professor Scheib, haven't you?"

Nathan nodded. He stooped to lift Jamie's suit case. "Talk just 's well in the wagon," he said. "Ought to be getting back." Jamie waited till they were on the way down the long slant toward the village. Nat hadn't changed much; he had the same old single-track mind that could do only one thing at a time. No use to talk to him when he was busy.

"You was saying something about this p'fessor," Nathan prompted him.

"Scheib—the only really big man on the faculty." Jamie spoke quickly. "A whole lot too big for a one-horse college like Centerville, of course. Been seeing a lot of him this last year. You see, I specialized in sociology and pol. econ, and they're both in his line."

"Uh-huh. Means how to get along with folks, I take it, and how to run things—businesses and gov'ments and so on. Guess you couldn't 've picked out nothing better to study up." Nathan nodded over the reins. "No wonder you done so well at it—ought to come natural f'r you. Take after your ma, and she was a great hand to run things, Hattie was. Smart's they make 'em." He hesitated. "Milly Hadden's kind of like her, some ways."

Jamie slipped past the diversion. "Well, Scheib's quitting his job this year. He's just wasting his time at Centerville. He's going to edit a new review—a lot of the biggest men in the country are backing it—and"—he sprang his climax with a pardonable touch of pride—"and he wants me to go in with him! Assistant editor, I'll be—the second-best job on the sheet!"

Nathan was silent even longer than usual.

"I thought you'd be pleased," said Jamie, a hint of complaint in his tone. "You always wanted—"

"Pleased ain't just how to put it," Nathan told him slowly. "Can't seem to take it in, not all at once. Editor! Ink ain't hardly dried on your diploma and you step spang into a job 't most men don't get till they're gray-headed!" He inhaled audibly. "Wish 't your ma could 've made out to live to see it happen."

Relief and satisfaction were in Jamie's look and voice.

"I thought, for a minute, that you didn't like the idea." He laughed. "I might have known better. It's all your doing, Nat. If it hadn't been for you, I'd never have got my chance. I want you to know that I realize that. Maybe, some day, I'll be able to square things with you."

"No call to look at it that way." Nathan kept his narrowed eyes on the nodding heads of the team. "I'm paid back already. Feel 's if it was me, some way, 't was doing what you do—sort of second-hand. Kind of like being a partner, I mean. I'm real pleased, Jamie—it sort of proves I been right, trying to fix things so you wouldn't be tied down, with nothing ahead of you only farming."

He shook his head. "Getting harder and harder, every year, to wrastle a living off the land."

"*You* won't have to keep on doing it either," said Jamie. "Of course money isn't the main object of a paper like ours; but it'll pay pretty well, all the same. Scheib's got all the figures; we'll both be sure of a good living, and as soon as we're under way you can sell the place and come down and live with me—I've got it all planned out. You've done your share; it's my turn now!"

"DON'T know as it'd suit me, but it's right nice of you to look at it like that," said Nathan. They had reached the single business street of the village and were abreast, as he spoke, of the little brick bank. "How're you fixed f'r money, Jamie? Guess you'll be needing some to keep you going till you get started, won't you?" He pulled in to the hitching rail and wound the reins about the whipstock. Jamie stopped him as he moved to clamber down over the wheel.

"Wait a minute. I wanted to talk to you about that. Didn't expect to get to it quite so soon, but we might as well tend to it now and get it over with. I own half the place, don't I?"

Nathan's eyes opened. "Thought you always knew that. Left it to the both of us, Pa did, share and share alike."

"Just wanted to be sure." Jamie nodded. "Didn't want to ask you for charity. But as long as it's my own money I can take it with a clear conscience. How about buying me out?"

Nathan seemed to reflect. "Don't know how I'd manage it, right now," he said, after a pause. "Kind of scarce, ready money is, this time 'f year." He meditated again. "Leave you have some to live on, all right; but—"

Jamie shook his head. "I don't need it for that. I'll have my pay as soon as I start working. It's to invest. I—I always took it for granted that I had a half-interest, you see, and when Scheib and I talked things over I agreed to go into the business with some money; I told him I thought I could raise a couple of thousand. My share's worth that much, isn't it?"

"Is if you c'd get it, I guess." Nathan's eyebrows drew together. "Only thing is how to get it. Can't sell half the place, sep'rate—have to sell the whole of it 'r none, and it ain't easy, selling farm land. Might take a year to find a buyer."

"No need to. I talked it all over with Scheib. He put his finger on the right idea in a jiffy—trust him for that! He says the thing to do is to put a mortgage on the whole place, and then I'll deed my half over to you, and you can take your time paying off the loan. We can do that, can't we?"

Nathan frowned. "Always sort of hated the notion of a mortgage on any land I'm working. Kind of sours the soil, sort of, a mortgage 'pears to. But—"

"That's just sentiment—superstition!" Jamie laughed. "All the world's business is done on borrowed money. If that's all your objection—"

"SORT of hate to see you sell your share, anyhow," said Nathan. "Feel easier in my mind knowing you got the place to fall back on, case anything goes wrong."

"As if I wouldn't anyway, with you living on it!" Jamie clapped him gayly on the shoulder. "You're real likely to let me starve, aren't you? That's just the kind of brother you've been to me, all this time!"

"Might not have it myself," said Nathan. "Sight of folks lost their places 'count of mortgages. S'pose I don't make out to keep the int'rest paid up—"

"Then you'd probably lose it anyway, wouldn't you? Look here: The interest on two thousand is a hundred and twenty a year. You've been sending me five or six hundred every year I've been in college, haven't you? I guess you won't have much trouble raising that interest, now I'm off your hands for keeps!"

"Didn't get that money off the place," Nathan persisted; "not as fast as it got spent, I mean. Been saving it up ever since Hattie and me talked things over. Don't guess I ever got five hundred clear off the farm any one year. Ain't much more'n broke even lately."

"Well"—a hint of impatience came into Jamie's tone—"what do you want me to do? Come back here and settle down and help you farm for a bare living?

Digitized by Google Original from UNIVERSITY OF IOWA

"It was mostly my own notion, sending him to college and all. Wanted him to get his nose off the grindstone, Milly"

I can do that, of course; or, else, I can—"

"You know that's the last thing I want. But I hadn't figured on raising extry money right now. If I'd had time, or if I'd known beforehand, I could've done something. The's a sight of stove wood up in the wood lot—only it takes time to get it out and sell it."

"There you are, then!" Jamie slapped his shoulder again. "Borrow what I need now, take your time getting out the stove wood and pay off the loan with the money. Easy as A B C! And while you're doing that, the money'll be earning big dividends in the paper, a whole lot more than it'd ever pay if it was tied up in farm land. I'll fix up the papers so's you can sign 'em now."

and I'll be drawing down my pay besides. If anything goes wrong with you, I'll be in shape to help you out, and—"

"All right." Nathan climbed down over the wheel. "We'll go see Squire Fentress. Gen'ly has money to loan, and he'll

Divorced!

Prosperity and political campaigns can go their separate ways in this election year

An interview with
Colonel Leonard P. Ayres, famous business statistician

By Keene Sumner

DRAWING BY ROLLIN KIRBY

THIS summer, National Conventions will meet. Presidential candidates will be nominated. Beforemid-summer their campaigns will have started, and in November one of these candidates will be elected.

We are facing a five-months period which every business man dreads. Presidential election campaigns always have been a national business bugaboo. According to tradition they should be approached with caution; even with fear.

Is there any real basis for this feeling? Is it true that a presidential election year is always a bad year for business?

Let's be more specific: What about business during *this* campaign? Is there any reason why it should suffer *because of the coming election?*

Every business man has been asking himself all these questions; but I went to Cleveland in order to ask them of Colonel Leonard P. Ayres, who—among other things—is the statistical expert for the Cleveland Trust Company.

He comes pretty near to being statistical expert for the country at large. Probably no summaries and forecasts of general business conditions are more widely consulted than those coming from his office.

As the two queries in regard to this year's campaign are the ones with which we are most concerned, I shall first give Colonel Ayres's reply to them:

Next I shall tell what he said about election years in general. That is extremely interesting in itself. But it is also vitally important in judging what effect, if any, the impending campaign should have on business conditions.

"I do not at present see any valid reason for expecting a serious business depression this year," said Colonel Ayres. "Certainly there is no reason why a depression should come merely because we shall be electing a new President.

"We have had many campaigns, *in the past*, when business had good reason to be apprehensive. Times when our prosperity was definitely in peril. Times when the result of the election was uncertain; and when that uncertainty held positive dangers to business conditions.

"The present situation is entirely different. There is no vital relation now between business and the probable political issues. So far as I can see, it will make practically no difference, to business, what candidate is elected in November.

"Naturally, I have my own party affiliations. Naturally, also, I should like to see my side win. But so far as business prosperity is concerned, I think the result of the election will be of little consequence, one way or the other.

"We may have a slight business recession, or even a moderate one, during the election campaign this summer. But unless some unforeseen condition develops *in business itself*, the recession will not be justifiable from the *business point* of view.

"If it should come otherwise, it will be, in one of two ways, merely psychological.

"In the first place, there is a tradition that a presidential election year is bad for business. This tradition is a hangover from the period when, as I said before, there often was a close relation between politics and prosperity.

"The vital features of that relation have disappeared, but the tradition more or less survives.

"According to this tradition, the proper business attitude in election years is one of hesitation and caution; of watchful waiting.

"But when the business situation is as clearly defined as it is now, this attitude is unnecessary and foolish. If it is adopted by any large number of business men, with the result of a business recession, then such a recession will be purely artificial.

"THERE is one other way in which the element of psychology may conceivably, but without any real justification, affect business during the campaign.

"If it were not for what happened in 1924, I should say that we needn't even consider such a possibility in the present case. The 1924 campaign should have taught business men a lesson. I hope it did—but I am not yet certain.

"At the beginning of 1924, business was above normal and rising. Then it abruptly

Digitized by Google
Original from UNIVERSITY OF IOWA

dropped far below normal! But the recovery soon began; and before the end of the year, business was again above normal and still climbing.

"That violent reaction was unjustifiable on any *business* grounds. It was largely the result of political propaganda to which no attention should have been paid.

"This propaganda was an appeal to the fear of radicalism. Specifically, the fear that La Follette would be elected President. Yet every sensible business man should have known that La Follette didn't have the ghost of a chance.

"There was no excuse for that 1924 reaction. The country was prosperous; credit was in good supply; business conditions were sound. The trumped-up 'menace of radicalism' should have been ignored.

"But it was not ignored! The political hue and cry 'threw a scare' into the minds of business men; and the result was a sharp recession, which was mainly psychological.

"You cannot predict that sort of thing. After it is over, everybody sees how senseless it was. Let us hope that business men have learned from that experience and will see this senselessness *in advance*. In that case they won't lose their heads just because some politician shouts 'Wolf! Wolf!'"

KNOWING that I was coming to see him, and the purpose of my visit, Colonel Ayres had prepared a record of the average of general business conditions since 1880. During this period there have been twelve presidential election years, not including the present one.

In the average of these twelve election years, beginning with January, there was a steady drop until August was reached. The level remained unchanged in September. Then, although the election did not come until November, business began to improve.

This is very interesting—but not exactly reassuring! If that told the whole story it wouldn't make us feel very cheerful about the immediate future.

However, this record of average conditions does not tell the whole story. An "average picture" seldom does; for we do not see the extremes which were leveled down in making the average.

It is true that, in each of the past twelve presidential election years, there has been a downward fluctuation in business. But similar downward fluctuations have occurred in non-election years as well! And they have been almost as frequent, and almost as serious, in the "off years" as in the campaign periods.

"But," you may say, "what I want to know is this: Will business slump in a presidential election year, *without any other factor to cause the depression?*"

That is precisely what we all want to know. I put that question to Colonel Ayres; and again I added two that were even more specific:

"Is there anything in the political outlook *now* which is a menace to business? And, if the underlying conditions are at present sound, can business be seriously affected simply by the fact that we have to go through a presidential campaign this summer?"

Here is his reply:

"Taking the entire period from 1880, there has not been an election year—unless it was 1924—when there was less reason than there is now for business to be affected by the political campaign.

"The feeling that the mere election of a President must necessarily upset business is simply a tradition. The political issues which used to threaten our economic stability and prosperity are dead and buried.

"We have had election years marked by serious business reactions, amounting in some instances to actual panic. In a few of these cases, the panic was definitely related to the political issues. In others there was no connection whatever. The panic, or depression, merely *happened* to come in an election year.

"Up to 1904, every presidential campaign was approached in fear and trembling; and for a good reason. Until that time, our fiscal system had not been definitely established on a 'sound money' basis.

"Our financial world was forced to 'view with alarm' a possible change in the Washington administration. Every campaign held the threat of danger to business credit. And in every campaign, therefore, there was a frightened preparation for the storm which might come.

"Sails were trimmed, decks were cleared, unnecessary loads thrown overboard. In other words, money became tight, credit was hard to get, and business enterprise contracted. Although these precautions seemed wise, they had a drastic effect.

"But after 1904, the old familiar money scare was eliminated. This was chiefly the result of the famous telegram sent by Judge Alton B. Parker, the Democratic candidate in that election, Roosevelt being the candidate of the Republican Party.

"The situation at that time was an extremely interesting one. During 1901, 1902, and part of 1903, we had moderate prosperity. Crops were good. Yet in the latter part of 1903 we had a violent reaction.

"It was, in fact, a panic. But it was a rich man's panic! The poorer people were scarcely affected by it. And the causes belonged to that period in our business development. They are not present now; and under the conditions which exist today these causes of panic cannot arise.

"For the periodical panics of the past were due, either directly or indirectly, to the money system we then had.

"AFTER the Civil War, government securities, held by National Banks, were the basis of our money supply. But, as time went on, two things happened: The volume of these securities shrank, because the national debt was gradually being reduced. At the same time, however, business was entering a period of post-war recovery and expansion. This brought prosperity; and prosperity meant that we needed more money, and a more flexible credit supply.

"But, with more and more need for money, and with a smaller and smaller volume of government securities, the natural result was that the money supply became restricted and inflexible.

"If money cannot be secured in large enough amounts to meet the needs of active business, and such seasonal demands as those of harvesting and crop moving, credit stringencies will develop and interest rates will soar.

"Our chief source of wealth, at that time, was agriculture. Yet, because of this money situation, about all we needed to produce a panic was two consecutive good crops! The needs for money, which resulted from these good crops, could not be met, and trouble followed when business men tried to secure from the banks the loans which those institutions could not let them have.

"These conditions brought successive panics. They were essentially money panics, due to the lack of a flexible supply of money and credit.

"MOREOVER, there were constantly recurring money scares of another sort. Unsound theorists were loudly preaching their various gospels: the Greenback movement; the Free Silver campaign; all kinds of fiat-money schemes.

"In 1896, the Free Silver enthusiasts were beaten in the memorable McKinley-Bryan campaign. But we still were hampered by our inelastic money system. And in 1903, we had the Rich Man's panic I spoke of a moment ago.

"Mr. J. P. Morgan described it as 'an attack of undigested securities.' We had been enjoying moderate prosperity. But our heads of industry had begun an immoderate expansion.

"They issued what was, for that period, a great volume of stocks and bonds. The small businesses suddenly attempted to transform themselves into big businesses. The big businesses attempted to become very much bigger.

"But we had been through a period of only moderate prosperity. There was no flood of money seeking investment. Money, in fact, was tight.

"The result was that business was left 'holding the bag;' a huge bag stuffed with securities which nobody wanted to buy. And the result of *that* was a panic.

"Recovery from it was under way when, in the early summer of 1904, we approached the presidential campaign. Immediately came the old fear that a change of the political party in power might result in Free Silver or some drastic interference with a sound money basis.

"The Republican Party was for 'sound money,' but no one knew what the Democrats might do if they came into power. At their National Convention in Kansas City, they adopted a platform which was silent on the money issue.

"Then Judge Parker, having been nominated at Kansas City, exploded a bomb in the convention by sending the following telegram:

> "I regard the gold standard as firmly and irrevocably established and shall act accordingly, if the action of the convention today shall be ratified by the people. As the platform is silent on the subject, my view should be known to the convention; and if it is proved to be unsatisfactory to the majority, I request you to decline the nomination for me at once, so that another may be nominated before adjournment.

"By that courageous message, Judge Parker settled the old Free Silver menace. His ultimatum was accepted by his party; and with this acceptance, the divorce between business and politics began to be established.

"With the (*Continued on page 165*)

Back Up Now And Then— You May Get A Better Start

By Helen Christine Bennett

"OYEZ, Oyez, Oyez!" There was a sudden rustling of many garments as the occupants of the court-room arose. The crier cried on. The court stenographer shifted his papers and reached for his pencil. Through the open windows came the warm wind of South Carolina, bearing the heavy scent of opening roses. The judge seated himself, and everybody settled down for the morning session. The first case was called. The court stenographer's pencil flew over the page before him. But his mind throbbed incessantly with a single question:

"*Why are you here? Why are you here?*"

For months that question had haunted him, insistent, wearying. For months the days had closed without an answer. After the session, the judge and the prosecuting attorney and several other lawyers, together with a select few of the chief residents of the county where court was being held, gathered in the judge's hotel room to talk a while. Not of the cases of the day; honor forbade any discussion of those save in the court-room. The judge and his friends talked of the South they loved, coming back slowly in the long aftermath of the Civil War to some semblance of her former happiness and prosperity. There were many plans laid in those earnest conferences—plans that envisioned a glorious future for the wasted states of the Confederacy.

The long, lanky young stenographer sat among his elders, silent, listening. So had he listened day after day for years past. Coming to the court as a youth self-taught in stenography, he had passed the competitive examination so well that he had received an immediate appointment. For a time he had been entirely happy. To be in the company of these brilliant and able men, to sit with them, and hear day after day their wise administration of court affairs, it seemed that no greater luck could have befallen him. But lately he had not been so satisfied. That question plagued him. Even as he sat in this back room and listened, it was buzzing in his head. . . . What was that the judge was telling?

Judge Joseph B. Kershaw leaned back in his chair. His abundant but close-cropped white hair topped a ruddy countenance with a nose like a beak and the piercing eye of an eagle. Broad-shouldered, narrow-hipped, lean and hardy, he had come through four years of fighting without a scratch. Charmed, they called him, for always he rode a gray horse, a conspicuous target in many battles.

"He looks like a game cock," thought the young stenographer; "and he is a fighting cock too."

"That reminds me," the judge was saying, "of my starting to practice here after the war. When I came home, my wife met me and took me into the pantry and storeroom, and showed me there wasn't enough in the house for a meal. When I left that storeroom, why, it would have kept us a year! And here was I, no money, no practice, no prospects.

"But to practice I had to have an office. I went to a man in Camden who had an empty store, and told him I had no money but I'd pay the rent when I did have some, and could I have the store for an office. He agreed. I swept out the store and put in two kitchen chairs and a table and laid a newspaper over the table. On this I put my few law books.

"And I give you my word, I'd hardly got them in position when a man came in.

"'IS THIS General Kershaw?' he asked. I said it was.

"'Well, I'm from New York,' he said. 'I represent the owner of a plantation near here, and as soon as I can get the essential papers, I want you to get the place in shape. May I give you a retainer now?'

"I found voice to say he could, and he counted out one hundred dollars in ten-dollar gold pieces right into my hand. I signed a receipt, waited until he rounded the corner, then shut up my office and went home to my wife. I put my arm about her and counted into her hand those ten wonderful gold eagles.

"'I told you we'd be all right,' I said. But I was through with business for *that* day."

There was a roar of laughter, and the young stenographer joined. Then he

William Adger Law is president of the Penn Mutual Life Insurance Company, of Philadelphia. Mr. Law, a native of South Carolina, began his career as a court stenographer, went from that to banking, and then into insurance

stopped. In the back of his head the question throbbed in a new form:

"*Who are you? Who are you?*"

This time there came an answer.

"A recorder of men's deeds," he replied to himself with bitterness, "not a doer of them."

IN THAT instant he knew that he was through with the court, through with the safe position that kept him and his young wife in comfort, through with security. From now on, like the men he admired, he would be a doer. If outside that safe position all that life offered was a gamble, he would take the gamble, content that at least he had stepped out into the game.

"In his years at court the young stenographer had read law. If he stepped from safety into the world of chance, the logical place for him would be that of a lawyer. But the disputes he had seen settled in the court-room had almost entirely concerned money. The manipulation of capital, insuring its flexibility, placing it where it was needed, this, he felt, would be the most important factor in the upbuilding of the South. He decided to become a banker.

To pursue an ambition to be a banker usually means years of routine service. But the stenographer had no time for this. He was through with routine. He had wasted enough years already. He was going to run a bank. To run a bank, he must be its president, and to become president of a bank without years of service meant that he must organize a bank. He set to work. He knew his countryside thoroughly. Had he not rotated with the judge for years? Of all places near, his home town of Spartanburg offered the best opportunity.

Spartanburg had banks. Just two years before a new one had been started, of which he, to his great surprise, had been made a director. But there was no savings bank. He determined to organize one.

He planned every step carefully, with the precision of analysis he had learned through years of court sessions. He knew his assets. He listed them:

One honest family (his) known to all the townspeople
One fine brother, who worked in a bank
One friend, a young lawyer, who would join them
Between five and six thousand dollars of his own savings
Several thousand dollars of his brother's and friend's savings
One brief experience as director of a small new bank
One powerful determination to succeed.

If any modern banker smiles over this list it will be a smile of honest admiration. With these assets behind them, the three young men canvassed the town of Spartanburg, asking for stock subscriptions to their savings bank. The stenographer had calculated that they could begin with fifty thousand dollars. No one person was to be permitted to subscribe more than one thousand dollars. With dogged persistence, the three young men talked themselves into and out of the houses of their home town. If they met rebuffs, they took them cheerfully, for, despite the wiseacres who were shaking doubtful heads, there were here and there men who welcomed the would-be bankers with open hands. It took them months to sell that stock; but they sold it to one hundred and forty-two citizens. They resigned their jobs, bought a store, and after several months they opened "The Savings Bank of Spartanburg." On the opening day, after everyone else had gone, the court stenographer sat in his office at the rear and looked fixedly at a modest sign that appeared on the door:

William A. Law
President

He was celebrating an anniversary. It was exactly one year since the day when he had arrived at an answer to the question which so long had throbbed in his mind:

"Who are you? Who are you?"

To William Adger Law every one of the years since has been filled with adventure. His new bank grew and flourished. Law passed from it to a great bank in the city of Philadelphia, working his way up from assistant cashier to the presidency. From this post, he came to his present position, that of president of the Penn Mutual Life Insurance Company, which is the tenth largest life insurance company in the country.

"When I left the court-room," he said to me, "I began playing the biggest and most romantic game on earth, the game of business."

I TALKED with Law several times, at his office and at his home, before I sensed this inner belief in romance. Outwardly Law is the judicial type. As I shook hands with him at our first meeting, I looked up at his six feet some inches of dignity, and thought that I had never seen a man who stood straighter. He is lean and bronzed and hardy, as a man who has spent much time in the open. But his manner is reserved. He is pleasant without smiles, affable (*Continued on page 143*)

If You Ask Me:

Most of us waste precious time chasing will-o'-the-wisps

THERE is a fortune—a large one—waiting for the man who can make plain horse sense palatable and popular.

Tell the average run of folks to eat less, walk five miles a day, and breathe more deeply. Many of them will yawn in your face. Tell them that some savant has discovered a magic "cure-all," and they'll all prick up their ears promptly.

Inform 'most any human being that he will be happy here and hereafter if he follows the Ten Commandments and the Golden Rule. He'll register complete boredom. Mention some new Cult that promises the latest thing in passages to the Pearly Gates. He'll travel twenty miles to hear all about it.

Try to convince the fellow who works alongside you that honesty, energy, and common sense will take him inevitably from where he is to where he may reasonably expect to be in the future. He will bat your Copybook Maxim right back at you. Suggest that he might make his fortune by investing in some wonderful new "device." Before you are through, he's off down the street, hocking his Liberty Bonds or putting a second mortgage on his home.

The busiest Exchange Bureau in the world is the one at which millions of us are forever trying to swap Old Lamps for New. We need new cults, new devices, new discoveries, new wisdom far less than we need sense enough to profit from those practical precepts which time has tested and tamped down. How few of us heed them! We go about with our eyes and ears half shut, trying out short cuts to health, wealth, and happiness, pursuing stupid panaceas prettily fixed up, and falling for new-fangled flubdubberies which offer to our gullible minds ease and salvation, without a struggle. So far as we are concerned, all the sages of all the ages might as well never have lived and suffered and learned and passed on to us their precious legacies of wisdom.

And it is all because the real rules of life are so obvious that we find no glamour in them.

Merle Crowell

These Swift Couriers Are Always Homeward Bound

By Appleton Street

A THRILLING incident of the World War is the story of how a carrier pigeon helped to save the remnants of the Lost Battalion. His name was "Cher Ami" (Dear Friend), and surely it was a friendly providence which sent this gray-feathered soldier with the Battalion on the night of its memorable advance.

Their objective attained, a runner was dispatched to headquarters with the news, and six hundred and seventy-nine tired soldiers hoped for a little rest. Cher Ami and four other pigeons sat in their baskets and slept.

Early next morning the Americans were surprised to hear commands spoken in German issuing from the forest behind. A patrol investigated, and found the woods alive with the enemy. In the night the American line of communication had been broken, and the Battalion was entirely cut off from its support.

Then followed five torturing days of almost continuous gunfire. The Battalion famished, and the wounded grew delirious for want of water. One by one, pigeons were released with messages, but no relief arrived. And then, one day, as the men were gnawing leaves and sucking mud for drink, a new barrage began to fall. It came from beyond the encircling enemy, and as it continued its rain of splintering steel, the awful truth dawned upon the little group: Their position was being shelled by Allied artillery!

One pigeon remained in the basket. An officer hastily wrote, "For heaven's sake, stop it!" rolled the message into a capsule, and tied it to Cher Ami's right leg. The pigeon lingered a moment in the friendly hand of his comrade—then, with a sweep of outstretched wings, rose into the smoky air.

But there was more than smoke in the air, and a second later he dropped back, wildly fluttering in the surprise of sudden pain. Dully the men watched the frantic flapping of the wounded bird. The last pigeon!

But Cher Ami was not done for. Out of the welter of choking fumes and shrieking shells, there came a mysterious, insistent call. "Come home!" it whispered. His spirit heard. His wings caught the air again, strong, powerful strokes carried him up, above the battle smoke, and quickly he was lost to the wondering gaze of the officer in the shell hole.

HALF an hour later a sergeant at the pigeon loft at Rampont, twenty-four miles away, saw a gray speck drop from a cloud. It circled and presently Cher Ami fluttered down on the landing board. He dripped blood as he reeled, hopping on one leg toward the loft entrance. The sergeant picked up the crippled bird. A machine-gun bullet had pierced his breast and torn away his right leg, but the message capsule hung by a clotted ligament. And that is how headquarters received word from the Lost Battalion.

The barrage was stopped at once, and, later, the 304th Infantry of the A. E. F. smashed through the Argonne woods and brought the remnant of the Lost Battalion

Lynn Bogue Hunt

—two hundred and fifty-two men—to safety.

Like many other heroes of the war, Cher Ami is now dead. But for nearly a year he survived his wounds, and lived to return in an army transport, to be recommended for the Distinguished Service Cross, and to become the petted mascot of the Signal Corps Headquarters in Washington. His valiant work and that of eight hundred pigeon comrades in the A. E. F. did more than merely get important messages delivered through the war zone. It demonstrated the superior value of birds as couriers, with the result that both the army and the navy have established permanent lofts for the breeding and training of pigeons.

Moreover, civilian interest has increased amazingly since the war, and the birds are now to be found in every state. Last year more than four hundred thousand pedigreed homing pigeons were registered in this country, in addition to those registered in previous years. Recently six thousand were released in Tennessee in a single interstate race. Five important races are run in the United States annually, and thousands of dollars in prizes are offered. One pair of homing pigeons recently brought $1,280, and sales at $500 and $750 are not uncommon. There is a monthly periodical in this country devoted to homing pigeons exclusively, and the owners of pedigreed stock have formed a national association. Devotees of golf or trap-shooting are not more absorbed in their sport than are the owners, trainers, and admirers of carrier pigeons.

"BUT if you want to know *all* about pigeons, you must see Mr. Thomas Ross."

I was told this so repeatedly—especially when I began to ask the "why" and the "how" of pigeon instinct—and I was told it by so many different persons that finally I quit asking questions of others and sought out Mr. Ross.

Thomas Ross, I discovered, has been raising pigeons since his boyhood days in Scotland, forty years ago. When he came to the United States as a young man, he brought a coopful of pigeons with him, and it is said that the Ross stock has contributed more to the improvement of the homing strain in American birds than any other one factor. For many years Mr. Ross was superintendent of a textile mill in Philadelphia; pigeons were a hobby. But so preëminent was he in this hobby, that three years ago the army authorities persuaded him to devote his talents to the army lofts at Fort Monmouth, New Jersey, where all birds for the army are produced. So, in 1925, Mr. Ross divided his choice stock of pigeons into two halves. One half (twenty-five pairs) he sold to the army for one dollar, the other twenty-five he sold to individual fanciers for $12,500. He moved to Fort Monmouth, and is spending (*Continued on page 74*)

The Greatest Bridge In The World And The *Man* Who *Is Building It*

By M. K. WISEHART

RECENTLY, from a vantage point atop the Palisades, a mile or two north of Edgewater, New Jersey, and directly opposite One Hundred and Seventy-ninth Street, New York, I stood watching what was going on more than three hundred feet below. A hundred men were at work down there. Moving to and fro, some of them trudging behind wheelbarrows, they seemed no bigger than insects. It was all a miniature world.

Among other things, I saw great river scows, seemingly no bigger than elongated water beetles, brought in by tiny tugs to a wharf alongside a cofferdam. This cofferdam, diminished in my perspective to the size of a child's plaything, is actually immense in size. Within it (out of sand and cement brought by the scows) is being built a concrete foundation, which goes down to solid rock, eighty-five feet below the surface of the Hudson River.

"That foundation," said a voice at my side, "will consist of scores of thousands of cubic yards of concrete. When completed it will be the greatest mass that man has ever created on any area so limited in size. And on that foundation will be built a tower that will rise six hundred feet above the water. Yes! That tower will be a hundred feet higher than the monument built in Washington, D. C., to honor the Father of Our Country; it will soar three hundred feet and more above the point where we are now standing.

"On the New York side of the river there will be another tower of equal height; and between these towers will be suspended the central span of a bridge—the Hudson River bridge. From pierhead to pierhead that span will be thirty-five hundred feet in length, twice as long as the next greatest span in the world. Can you visualize it?

"Imagine yourself standing at the corner of Fifth Avenue and Forty-second Street, New York, and looking up as far as Fifty-seventh Street, a distance of fifteen blocks or three fifths of a mile through the busiest part of New York's shopping district. That will give you an idea of what this fabulous center span will be in *length*. In addition, you must imagine these fifteen city blocks lifted and suspended two hundred and ten feet in air above the river, widened to *twice* the width of Fifth Avenue, and thronged with motor cars and buses from curb to curb."

At this moment we turned to survey what was going on in our immediate vicinity: There, atop the Palisades, the pneumatic drills are singing, biting deep into the igneous rock, boring holes for dynamite. At moments, like a great wave thrown up from the breast of the ocean, tons upon tons of rock are burst asunder, torn out, hewn and ripped from their age-old resting place. For an enormous cut is being made in the Palisades, a cut big enough to accommodate the western approach to the bridge. This approach itself will be nearly a half-mile in length.

"Yes," went on the voice of the engineer who was showing me the progress of the work, "with the aid of powerful searchlights we are working nights as well as days. Even so, it will be nearly five years before the bridge is open to traffic, probably in 1932. (*Continued on page 183*)

THE HUDSON RIVER BRIDGE, which will connect New York City directly with New Jersey, will be one of the greatest construction feats of mankind, and Othmar H. Ammann is the engineering genius behind the project. When he was a youngster in Switzerland he was fired with zeal to bridge the mighty Hudson, and finally he came to America with that project in the back of his mind. Patiently, skillfully he worked toward the great goal. The central span of this tremendous bridge will be three thousand five hundred feet long, and will be held up by two vast towers, six hundred and fifty feet in height. This span will be twice the length of the next greatest span in the world. The total length of the bridge, including the approaches, will be nine thousand feet; and the total cost about $75,000,000. The picture at the top of the page shows the bridge as it will look when completed, about five years from now; the one below is of an approach to the central span; while on the opposite page you see one of the great towers.

THIS IS ROSS SANTEE, of Arizona. He's a horse-wrangler, artist, and writer. Samples of his pictures are printed on the three pages following, and in the accompanying article he tells what a rough time he had in launching his artistic career. He came East, was "durned near ruined by advice," went West again and tried to forget art. But he couldn't forget, for he is an artist at heart. His home is still in the cow country, but he spends a little time (as little as possible!) in the East, where the demand for his remarkable drawings and etchings is growing rapidly. This portrait of Santee was painted by his friend, Rolf Armstrong.

Advice *Is All Right* If You Don't Take Too Much Of It

By Ross Santee

YOU can't be someone else an' get away with it, no matter how hard you try—at least I couldn't. For years I tried to draw pictures someone else's way, listening to everyone's advice, an' I got nowhere. But as soon as I began to draw my own way, an' cut out listening too well, things started to break for me.

I like to draw pictures. As far back as I can remember it's always been that way. As a kid I drew pictures of the things that interested me—anything that struck my fancy. They were no better nor no worse than those the average kid makes. But I drew the things I wanted to, an' I drew them my own way. I was never able to copy, an' what few attempts I made were no fun, an' flat failures. One in particular I remember:

The "What Cheer District Fair" was a big event in the part of Iowa where I was raised. An' along with the prizes for fat stock they gave prizes for needle an' art work in Floral Hall, all hand done. Butch Watson an' I usually went to the fair together, an' I have no idea how we came to be in Floral Hall. For all our time was spent either at the stables or hanging over the rail in the quarter stretch, watching the horses score. But, anyway, the drawing that had won first prize that year was the head of a Percheron stallion drawn in black crayon an' copied from the "Breeders' Gazette." On looking it over Butch reckoned I could do as well. Better, I thought.

It was too late to enter anything that year. But wasn't the "What Cheer District Fair" an annual event? I dug out a bunch of old "Breeders' Gazettes" an' finally picked out the head of a Hereford bull that looked easy to draw. It would have been easier for me to draw a horse, but as long as a horse's head had won first prize this year I figured I'd be different. An' to add a realistic touch that wasn't in the photograph, I put a ring in the bull's nose. As soon as the drawing was finished I struck a hi-lope after Butch. "Looks like he's been fightin'," said Butch, as he bent a critical eye on my masterpiece. "You've done too much erasin', too." I had to admit the head was kinda out of shape an' the drawing was rather mussy, but Butch liked the ring in the bull's nose. "Better do it over," says Butch, "an' don't do so much erasin'."

But by that time I had lost all interest in my copy of the bull. Butch would have made a good art editor.

MAGAZINES were scarce in those days. At least they were in our house. An' about the only drawings I saw were John T. McCutcheon's cartoons in the old Chicago "Record." That was when McCutcheon was drawing his "Boy in Springtime" series an' his "Bird Center" cartoons. His drawings interested me so much that when McCutcheon went over to the "Tribune" we switched along with him. When the drawings appeared in book form my oldest sister got both books for me.

It was about this time that the sign painter came to town. He stopped off between trains an' did some lettering on the window of the local bank. "The Thornburg Savings Bank," that was all. For there was no surplus in that bank.

We saw him as we were coming home from school one noon. The other kids all watched a while, then beat it home. But I stayed an' watched him until the first bell rang for school before I hi-tailed it home to water the horse an' cow an' grab a bite to eat. For here was an artist in the flesh. The first one I'd ever seen.

I waited till the other kids had gone before I spoke to him. My awe of the great was such I couldn't feel real free to talk.

Digitized by Google
Original from UNIVERSITY OF IOWA

"Where did you learn to be an artist, mister?" I finally asked.

"Just picked it up," says he. The conversation sort of petered out at that, for he didn't seem interested to talk, so I finally took another tack: "I got two books of McCutcheon's cartoons at home," I says. An' then I came near passin' out, for he said McCutcheon was a friend of his.

"He makes a lot of money too," he says.

That settled it for me. I'd be a cartoonist now, for sure. For drawing pictures wasn't work. An' hard labor in any form had never appealed to me. That was all the sign painter ever said. At least, I don't remember any more. But that evening when the passenger came in an' headed East, I followed the painter to the train.

It never occurred to me that pictures other than cartoons were drawn. An' the only other picture I recall was a color print we had at home called "Fleeing From the Flames." A bunch of horses running from a fire at night with one horse hung on the fence. The print was in the kitchen above the kitchen table, where I always ate when I was late for meals. I don't remember where I picked it up, but it belonged to me. An' it never occurred to me that anyone had drawn or painted it, for those horses were alive to me.

The last two years in high school were spent in Moline, Illinois. An' among the other things I flunked was drawing. For I wasn't interested in making copies of plants an' flowers. There were too many interesting things outside. I could see the Mississippi from the room. An' just at that particular time I was more concerned than anything else in learning to shoot a good game of pool.

THE last year I was there they sent the football team to Chicago to watch the Carlisle Indians play the U. of C. An' after taking in all the dime museums in South State, three of us dropped into the Art Institute. We wandered through all the galleries, an' by just a happen-so we got into the school downstairs. The corridors were lined with drawings students made. An' when I found an original McCutcheon cartoon, I knew I was going there to school.

Three months, I figured, would do the trick. Mebbe six months, at best. An' I'd be able to draw cartoons an' get real money for them too—at least, that's what I thought.

The cartoon class met once a week at four o'clock. We pinned our drawings on a line across the room an' the instructor criticized.

OUR ideas never varied much. The cartoons consisted of drawings of Bryan, Roosevelt, an' Taft. Occasionally some brilliant mind flashed one about the weather or some local happening. But most of the ideas we brought in had moss upon their backs.

Everyone tried to draw like someone else an' imitate their style. Fitzpatrick worked like Zim an' Opper at that time. An' Wood Cowan tried to draw like "Ding," or J. N. Darling, of the "Iowa State Register." I've often wondered since why the instructor didn't encourage us to draw things our own way. For, strange as it may seem, he even encouraged us to imitate the men whose work was popular.

At first I tried to draw things my own way. But my drawings were so crude I took to imitating too. That was where I made my big mistake, although I didn't know it then—not realizing that one drawing of my own, no matter how crude an' badly drawn, was worth all the imitations in the world.

Donahey of the Cleveland "Plain Dealer" was the first man I tried to imitate. E. W. Kemble was the next man to strike my eye. I even went so far as to carry upon my hip an enlarging glass, which I bent on every Kemble drawing I could find, looking for hidden tricks. I'd follow one man's work a while, then switch to someone else, an' by the time the first year ended I had no point of view. For three months soon slipped away, an', first thing I knew, the year was gone with no editors knocking on my door. That summer I played ball with a Rock Island brewery team that traveled over Iowa an' Illinois. We played a few games in Wisconsin, an' aside from the fact that we made no money the trip was a huge success.

I came back broke that fall, but I had plenty of company there at school. For most of the students I knew worked. Ralph Holmes was the registrar. The best friend any student

ever had. For he gave us all tuition jobs when otherwise we'd have had to quit.

We worked at the lunch clubs for our meals, "carrying off the dead." Some ushered at the theatres. While a few of us worked back-stage. Some students smashed baggage at the Am. Express. Others were guards on the L. One friend of mine earned his board an' keep by sleeping in a morgue, while another was a carriage man at one of the local theatres. He bawled the numbers through a megaphone. An' the brass-buttoned coat he wore dragged on the ground, for it had originally been made for a colored gentleman who was six-feet-four in height.

An art student's day was full, to say the least. The life class began at nine o'clock an' lasted until noon. But at eleven-thirty there were only a few plutocrats left, for the rest of us rushed for our jobs. For an hour an' a quarter we either carried off dirty dishes or did "fancy diving after pearls." An' when we returned to the classroom we were wrapped in the odors of food. The girls usually opened the windows when the herd came thundering in. An' McCool, a friend of mine who never broke a dish in all the time that I "slung hash" with him, finally quit because the dogs all followed him.

THERE were classes in the afternoons that lasted until four o'clock. Two afternoons from four to six I swept nine acres of corridors an' classrooms. An' for wielding a broom an' the sawdust bucket I was given my tuition. From six to seven I had free. That was when I ate my second meal. An' McCool an' I usually crowded in a movie on West Madison before we went to the theatre. Mary Pickford was known as the Biograph Girl an' there were illustrated songs between pictures. We usually had to leave before the show was out, but we got it all for a nickel.

At seven o'clock we had to be on the job at the theatre where we worked. There was another session with the broom an' sawdust bucket here, for the first thing we had to do was sweep the stage an' get the first act set. We usually got home by midnight, depending on the length of the show. The first year I worked we got six bits a show. But after they took us into the stage hands' union, they raised it to a dollar. Occasionally we worked a show where we made extra money, by carrying a spear or howling with the rabble in a mob scene at four bits a performance.

AT THE house where I roomed on Ontario Street there was no one but art students. Occasionally, some hardy roomer other than a student tried it for a while, but he soon moved to quieter quarters.

Most of us came from the West an' Middle West, bitten by the bug called art. There were various reasons why we came. Some hazy an' some plain. But nine out of ten who told the truth had either copied cartoons when they were kids or copied Gibson girls. Some wanted to be illustrators, others were slinging paint. Fitzpatrick an' I were the only ones in the house who wanted to do cartoons. Some had come to be cartoonists, but as their appreciation of pictures grew they raised their sights and started to sling paint an' called cartoons the bunk.

At first I wouldn't admit to myself that I wanted to draw pictures other than cartoons. But pictures I'd liked when I first came to school had ceased to interest me, while pictures I never noticed when I came had got hold of me.

Deep down inside I knew I wanted to draw things that lived an' moved. For cartoons no longer (*Continued on page 156*)

Paine's Career Is A Triumph Of Early American Virtues

By Frederick L. Collins

THE richest man in Boston is seventy-three years old. But you would never guess it in a thousand years. He is gray, of course. But his is "a green grayness."

When I first met him, he was sitting "bolt-upright" in the big warm library of his Commonwealth Avenue home, wholly surrounded by used books. On the flat, shiny desk in front of him, open to page 146, lay the second volume of Carl Sandburg's "Lincoln." "Benjamin Franklin, the First Civilized American" was next in line. And in a rack at my end of the big desk, stood out several familiar titles, some not so familiar:

Thomason's "Red Pants"
The Holy Bible
"A History of Woodstock"
"The Life of Pasteur"
"South American Observations and Impressions"
"Two Years Before the Mast"
"A Library of Poetry and Song"
Lindbergh's "We"
"A Short Cut to Spanish"
A book of philosophical essays by
Spinoza, Swedenborg, Comte, Voltaire,
Spencer, Schopenhauer, and Kant.

"I suppose I should apologize," he said with a quick smile, as his keen eyes followed mine to the bookrack, "for being so old-fashioned. But when I was a boy, there were no movies to go to. I just *had* to learn to read."

"Spinoza?" I asked.

"No," he laughed; "I began on Smiles's 'Self-Help.' But the underlying philosophy is much the same."

William A. Paine threw himself back in his chair and looked out at me over his thick glasses, humorously, inquiringly, as if he were trying to find out if I was still "with him" in his quick jumps from "Self-Help" to "Tractatus Politicus." Then, apparently satisfied, he jumped up and dragged me with a friendly expansive gesture to a seat in the lowest and fattest of the great leather chairs.

When I told him that I was more interested in *his* philosophy than I was in either Smiles's or Spinoza's, he laughed again, a big booming laugh that died away into a chuckle.

"My philosophy," he said, "is simple: The great thing in business is to know what you want to do. Then, do it."

"The great thing in business is to know what you want to do. Then, do it." It was a simple phrase, but as I looked at the young-old, bright-eyed, and gray-haired millionaire who sat in the middle of this book-filled room, I imagined that it had been, in his case, profoundly true.

"Necessity taught me that lesson," he continued. "I wasn't so husky as either of my brothers, and in order to keep up with them I had to use every ounce of my strength where it counted most. I couldn't afford to dissipate my energy in a dozen different directions. I had to find out what I wanted to do; then do it."

Did I say that William A. Paine is young? He is—richly, warmly, robustly young. Yet, somehow, he is terribly experienced and—for lack of a better word—authentic. He looks as if he had known what he wanted to do, and had known it for a long time. And as if he had done it—in his quick, nervous, purposeful way—supremely well.

It is no shock to the probabilities to find that he owns a banking business which has spread over seventeen cities, that he controls a mining corporation which is the second largest of its kind in the world, that he possesses a personal fortune which is said to be the greatest in the New England States. He's that sort of man, is W. A.

He comes—perhaps you've guessed it from the kind of books he reads—of good old New England stock. W. A.'s father was by profession a man of peace. A minister of the gospel, Congregational, I think, who became a chaplain in the Civil War. Eighth Massachusetts Volunteers, sir, and very proud indeed of it!

Chaplain Paine came home from the war with a ministerial sore throat which made further preaching almost impossible. For a while, he edited a newspaper out Wisconsin way. Then he moved to Rockford, Illinois, and acquired an interest in a local store. But he had no gift for business, and the family moved back East to Massachusetts.

Under the pressure of family necessity, relieved now and then by a tiny income from intermittent "supplying," the two elder boys went to work: Ed in a paper company; Charlie in a wholesale grocery concern. But Willie, at his mother's insistence, was to be educated into a scholar.

"Was that something you had made up your mind you wanted to do?" I asked.

"I didn't have a chance," he laughed. "You never knew my mother!"

I did know from others that W. A.'s purposefulness—his outstanding characteristic—was a direct inheritance from this strong-hearted, strong-minded New England woman, who was, he gratefully acknowledged, the motivating influence in his early life.

But, whoever made the decision, Willie attended to the execution. He hadn't had any of the Latin which the classical course in the Charlestown high school required, but "he knew what he wanted to do," and by hard study at night he did it, reciting his Latin lessons by special arrangement to seniors assigned to the job.

And although Willie caught up with the rest of the class, and finally led it in Latin as well as in all other subjects, he succumbed in the process, and had to leave school.

There may have been other reasons. It's no fun wearing an older brother's worn-out clothes. And it's less fun wearing *two* older brothers'. When Ed Paine went through the coat to his suit and Charlie the pants to his, Willie had to step out in Charlie's old coat and Ed's old pants. Shoes were even more trying; for the boys' mother, desiring to distinguish Ed's brogans from Charlie's, purchased those with red metal "tips" for the one and those with blue metal "tips" for the other. As a result, Willie often appeared at school with one red toe and one blue. That's the kind of thing that makes a boy think longingly of the advantages of a money-earning career.

Anyhow, Willie went to work and became Will!

"I'LL never forget my first morning," he told me. "Of course I arrived before the boss. Boys always do the *first* morning. But a little after eight, the old man appeared around the corner. He was tall and thin and sported a long red beard, of which he was very proud. In his hand, he held a new broom, which he handed me with a few appropriate words about how a new broom should sweep.

"My broom swept clean all right, but it didn't sweep long. Somebody dropped a match in a back hallway, and the resulting fire swept out the place more thoroughly than any new broom or new boy could possibly have done. Incidentally, it swept me into the Blackstone Bank, where I stayed for eight years."

In his new job, Will Paine didn't get much money. Five dollars a week at first. But he did get experience. Plenty, I should say, from the stories that have come down from his associates of those busy days. He was a gay, laughing youth, with a thirst for knowledge and a hunger for work. Any kind, any time. When the paying teller had a date for lunch, he got to depending on Will Paine to stand behind his window. The receiving teller acquired the same idea. And, in time, the former messenger found himself established as a sort of general assistant to everybody, from the oldest director to the newest office boy.

The interesting thing about all this is that it was done "on purpose."

UNIVERSITY OF IOWA

Paine had no intention of becoming a Jack-of-all-trades. He had made up his mind to become an all-round Jack at one trade—banking. For by that time, his ideas of what he wanted to do had solidified. He wanted to make money, of course. "I guess all boys want to do that," he told me. And he wanted to be the head of his own business. That, too, is a driving force with certain types of young men. It was with Will Paine. But now, for reasons that will appear, he wanted to make money in the banking business. He wanted to be the head of a banking business of his own.

With these objectives cleanly cut and silhouetted on the white sheet of his future, the next thing was to learn how to pin the tail on the donkey.

"I could have made more money at the time," he explained, "by sticking in one place. The tellers got as high as two thousand, and twenty-five hundred, whereas I never got more than a thousand. But I learned the banking business, and they learned nothing but their job.

"One of the first things a banker learns," he told me, "is preparedness. I saw the bank profit by it. So I made up my mind to profit by it too. I didn't earn much; but I didn't spend much. Those were the days of small things. And even the small margin between what I earned and what I spent helped roll up my preparedness snowball. I've seen the old ball melt nearly away a couple of times, but I've never stopped pushing, and the ball has never stopped rolling. From that day to this, I've never been without *some* money in the bank."

That sounds a bit New Englandy, doesn't it? Well, it is. And William A. Paine's whole career is a triumph of New England principles, a survival of the early American stock.

Bostonians like young men who always have something in the bank. W. A. likes that kind now. He picks them out of his great organization, trains them, makes them his friends, shows them how to make more money. He's done that for lots of them. Most of them are with him now. Some are his partners. Others will be. W. A. always has known the kind of man he likes—and sticks to him. That's why he is rich in friendships as well as bank accounts; why he always has something in the bank of good will. He is the rock-bound kind himself. That's why he has made good on "the stern and rock-bound coast."

But he isn't stern—and he wasn't even in those first grim days of youthful determination. He wanted to make money. And, unlike a good many young men who want it, he was willing to work for it. But he didn't kill everything else to do it. He tramped and rode horseback, and courted, and taught a Sunday-school class, and went to Niagara Falls, just like any other well-behaved, healthy young man of his period.

"I learned something else in those Blackstone Bank days," said Mr. Paine, "that helped to determine my whole course of life. I worked in every department of the bank, and met all of the customers. In time, I came to know a good deal about their business—the kind of things they needed and had to buy. And, since banking hours were shorter than business hours, I spent my spare time calling on my 'customers' and taking orders for office supplies. These orders I turned over to people who dealt in that sort of thing, and made a fair profit on each transaction.

"The money was helpful. So was the experience. It taught me the value of knowing the right kind of people, and being where the right kind of people are. I made up my mind that I was going to stick close to those people and make friends with them, that that was the best way for me to get like them."

Will Paine's apprenticeship in the bank ended in 1880. He and a fellow clerk, Wallace Webber, had saved between them three thousand dollars. With this capital, and a lot of hope, they hired a room on the third floor of 48 Congress Street, and started business under the firm name of Paine and Webber.

"I told Wallace," said W. A., "that he could have the seat on the stock exchange when we bought one; but that I was going to be head of the business. That seemed to satisfy everybody, and we started out to make our fortunes.

"The thing that determined me to leave the bank was my old habit of reading. I knew what I wanted to do, all right. I had spent all those years learning the banking business, so that I could some day have a banking business of my own. But it had seemed presumptuous that I, a thousand-dollar-a-year clerk, should actually set up as an adviser (*Continued on page 139*)

"Won't these flatfeet ever let a man alone? Won't they ever believe that he intends to run straight?"

The Frame-Up

Jim Hanvey, defender of crooks who "want to go straight," fights fire with fire

By Octavus Roy Cohen

JIM HANVEY did not look like a detective and, by the same token, his visitor did not in the slightest degree resemble a crook.

Harry Whalen was of average height and average figure, which means that his hundred and fifty pounds of weight were symmetrically distributed about a frame five feet seven inches in height. He had a square jaw, a pleasant face, and big, friendly brown eyes. But just at the moment those eyes were filled with the vague light of trouble, and his attitude was one of mingled pleading and anger.

"I'm in a rotten hole, Jim," he declared. "Unless you help me I'm in for a stretch . . . and you know what that would mean to me."

The man mountain in the easy chair toyed idly with the gleaming gold toothpick which hung from the hawser spanning his prodigious tummy. His eyes—small, lusterless, and fish-like—were curtained by the deliberate drooping of the lids. They opened with equal slowness and turned blankly upon Whalen.

Hanvey was the personification of inertia. He was an immense person, whose gargantuan frame was topped by a bulbous head which rested upon triple chins. Despite his tremendous size, the clothes which he wore hung loosely upon him, giving the impression of a bloated scarecrow.

Considering his visitor through expressionless opaque eyes, Jim reached for a box which stood near at hand and extracted therefrom a long black cigar. He bit the end from this with

meticulous care, lighted it, and blew a cloud of the acrid smoke into the room. Whalen blinked, but—politely—made no comment. Jim grinned.

"My cigars kinder strong for you, Harry?"

"They're pretty powerful, Jim."

"Have one?"

"No, thanks. But I'd be obliged for a bottle of smelling salts."

The ponderous detective chuckled good-humoredly. "Shuh! Harry, these things don't smell no worse to you than those cigarettes of yours do to me." His eyes roved toward the window and dwelt there ruminatively for a few moments. It seemed as though he had forgotten his visitor, and just when Whalen was beginning to fidget, Hanvey's slow, drawling voice came to him:

"HOW long since you pulled your last job, Harry?"

"Four years," answered Whalen promptly. "That's a pretty long time, Jim. Seems to me it proves that I really am trying to run straight."

"Sure does, son. You wouldn't noways fool me now—would you?"

Whalen's face flushed. "You know I wouldn't, Jim. No decent crook would lie to you. And besides, I've come to you for help."

"So you have. . . . Uh-huh! You sure have. What you been doin' all this four years?"

"A half-dozen things, Jim. It's pretty hard, you know, keeping a job and just barely getting along when a chap has been used to big money and high living. But I stuck it out, Jim; and just about a year ago I got a little stake together and bought out the haberdashery shop I'm running."

"Haberdashery store, eh?" Hanvey blinked slowly. "Got any red neckties?"

"Beauties."

"Maybe I'll come down and buy a couple. I don't usually go in for swank, Harry; but I do love red neckties."

"I'll be glad to see you, Jim,"—the man's voice was charged with bitterness—"provided they haven't sent me to the pen." With sudden fury he smashed one fist into the palm of the other hand: "Damn it, Jim! Won't these flatfeet ever let a man alone? Won't they ever believe that he intends to run straight? Won't they ever forget that they got crossed up once. . . . Listen, Jim, I'm not bleating; I'm not welshing. But I'm married! I'm happy. My wife—" He paused.

"Does she know?"

"About me having been a crook? Sure. I told her before we ever got married. If it hadn't been for her, I couldn't have stood the gaff. But I've been through the fire—and I've come clean, Jim. I don't want to talk too much about it. It sounds mushy."

"I like mush, son."

"You come down and see my shop, Jim. Then come home to supper with me and the wife. You'll understand."

"I'll do that very thing, Harry. Meanwhile, suppose you start at the beginning and tell me the whole mess."

Whalen stared bitterly at a spot on the carpet. Then he started to speak, marshaling his facts carefully and struggling to avoid any untoward display of emotion:

"I'll make it as brief as I can, Jim; there's no need elaborating details."

"None at all, son."

"It started eight years ago. I was pretty wild then. Forgery was my line."

"Sure, I know, Harry. And you were slick. I was after you once—and missed."

"So did Mike Lannigan. He was after me three or four times. I made him look kind of foolish down at headquarters. I understand they gave him the laugh and he swore he'd get me, no matter how long it took. When I married and went straight, I think he was the most disappointed man in America. He came to see me a few times—sneering at me, saying he knew I was covering something, announcing that he was watching me every minute. I laughed at him, Jim, because I knew I was through. All I wanted was to be let alone. I think any man is entitled to his chance to be honest. . . ."

He lighted a cigarette and hesitated a few moments before continuing: "There's no use my dwelling on everything I did, or all I went through. There were times when it was pretty hard sledding, Jim. There were times when— Well, that dirty dog came around to see Lilla when we were down and out. Told her all about me. Told her I'd slip some day, and when I did he'd see that I did a long stretch. I guess that was what kept me straight—Lilla's terror and the determination to show that guy that I was better than him.

"LAST year I got a chance to buy out this little haberdashery business. It isn't much, Jim, just a hole in the wall; but it's a good location and there's a nice living in it for a man who isn't scared to work hard over long hours. . . . Lilla keeps books for me and is my only clerk. At first I didn't even have a boy; I'd get down early and sweep the store out myself. I got an awful kick out of being a business man. For the first time in my life I was really happy. For the first time, I wasn't thinking that a man needed all the money in the world to be contented." He looked up. "I ain't boring you, am I, Jim?"

"Gosh! no, son. It's like a movie."

"Well—I guess I had a lot to learn about business. For one thing, I laid in more stock than I should. I got caught short. My creditors were beginning to yell, and I paid them every dime I had. I was still around two thousand dollars short."

Hanvey's eyes opened with maddening slowness and turned toward his visitor. But for all

ILLUSTRATED BY GEORGE BREHM

Hanvey opened the letter and held it out to the other's gaze

Digitized by Google
Original from UNIVERSITY OF IOWA

the change of expression on his heavy face, he might not have seen Whalen.

"Yes?" he prompted. "And then?"

"There's a man in this town, Jim, maybe you've heard of him? Quincy Ackerman."

"Yeh." Jim's lips twisted in distaste. "Nice, high-class, thoroughly respectable thief!"

"AND not always so respectable. That's how I happened to know him." Harry Whalen drew a deep breath. "I met him years ago, Jim, when things weren't breaking very well for me. There was some crooked promotion . . . and he needed my help. I did what he wanted, and the thing went wrong. Looked like both of us were going up. They sort of had the goods on me, and I had Ackerman dead to rights, because of a letter he had written me. But I thought he was a poor sap, and I fixed to leave him in the clear and take my own chances. No need of both of us doing time. The man was so grateful he almost made me sick. Wanted to do everything in the world for me. Cringed around like a whipped cur. Well, . . . I got clear, and of course they didn't have anything on him, the way I fixed things. You'd have thought I was the greatest man in the world . . . then."

He paused, and Hanvey prompted, "Then?"

"Sure. But since— Did you ever do a big favor for a man, Jim, when you had the goods on him—and then when he'd come clear, have him hate you because you had been in a deal together?"

"I know pretty well what you mean. And this Ackerman—"

"There were times when that dirty dog came around to see Lilla. . . . Told her all about me. Told her I'd slip some day, and when I did he'd see that I did a long stretch"

"He got respectable. Not honest, mind you, but respectable. He made money in ways that didn't put him in danger of the penitentiary. And I guess the more he thought of me, the more he hated me, because I was the one man in the world who had the goods on him. It has gotten so that he's the worst enemy I've got—the dirty, crawling crook! He'd like to see me out of the way for about ten years, just to get me off his mind."

"I see. You sort of make him remember an unpleasant past. Before he was successfully dishonest."

"Exactly. I knew you'd understand. But, to go back to my story, I needed this two thousand. I knew how Ackerman stood with the banks here, and I talked to an assistant cashier of a bank which had refused to loan me money. I asked him if Ackerman's endorsement on my six-months note would be acceptable and he said, 'Sure.'

"Then I went to Ackerman. He greeted me as cordially as though I had been a rattler. Well, at that, he doesn't love me any more than I do him. But I told him I wanted his endorsement on that note, and would almost certainly need a renewal. He kicked like a steer . . . and would have refused if he had dared. Anyway, I got it, took it to the bank, and they loaned me the money. It tided me over."

"And you're all right now?"

"No. It's this way, Jim: I've got to renew that note for another six months. And I can't without Ackerman's endorsement."

"Won't he renew?"

"No."

"Why?"

"Because he'd rather send me to jail."

The big, pursy face of the detective was alive with interest.

"For what, Harry?"

"Forgery."

"H-m! I'm afraid I don't understand all I know about this. You ain't been pulling anything, have you?"

"No. But he's got me dead to rights, just the same."

"S'pose you explain, son. I'm kinder hazy."

"WELL, Jim, suppose this were to happen: Suppose, when this note comes due—which is Tuesday—they make demand on me, and I can't take it up. They immediately notify Quincy Ackerman, as endorser, that he'll have to pay. And just suppose, Jim, that Ackerman pretends to be terribly surprised, and says that he never endorsed that note in the first place!"

Whalen ceased speaking. His face was white, and mirrored clearly the strain under which he labored.

Hanvey was thinking—although his heavy countenance gave no indication of that fact. He nodded slowly, with vast approval:

"A very, very slick scheme, Harry. I didn't know Ackerman had that much real brain."

"He hasn't!"

"But you said—"

"The whole plan was Mike Lannigan's."

"So-o. Mike's, eh?" Hanvey fumbled with his golden toothpick. "How come?"

"Mike's been after me hot and heavy, ever since I made a goat of him years ago. He thought for a while that I wouldn't stay straight. Now that he knows I will, he's out to frame me. And this is his chance. Of course he knows all about Ackerman, and the fact that I was in on a crooked deal with the man. He knew that we were together, and I guess he found out that Ackerman hates me. So he went to the man and told him how to get me. It was his idea."

"You sure?"

"Certain. Lannigan has been down at the shop taunting me about what was going to happen."

Digitized by Google Original from UNIVERSITY OF IOWA

"Sweet little playmate, ain't he?"

Whalen's eyes became hard as chilled steel. "It's right lucky, Jim, that they're not after me for murder. I almost killed him!"

"I wouldn't hardly blame you, son, except that murders are terrible messy. Now, let's see: You came to me—?"

"Because you're the only dick I know who's got a heart, Jim Hanvey. You play square with us crooks, and you've got the rep for preferring to keep a man straight. I want you to help me. I'm not going to get sentimental, but—there's the wife. . . . It's a rotten unfair thing. I've laid all the cards on the table. Will you help me, Jim?"

Hanvey smiled a slow, warm smile. "Sure, Harry, sure I will. If I can only think how."

Whalen drew a deep breath of relief. "You'll do it some way, Jim. I know you will—"

"Shuh! I ain't no good, Harry. Just lucky—and fat. Let's see now. . . ." He placed the ends of his spatulate fingers together and puffed reflectively on the black projectile which was held between his thick lips. "You said that you once had the goods on Ackerman?"

"Yes. There was a letter he wrote me. . . ."

HANVEY did not look like a detective. Mike Lannigan certainly did.

Lannigan was more than six feet in height; broad and muscular, and he walked with a firm, positive stride. He wore great square-toed shoes and a derby hat, and his eyes had all the mellow warmth of icicles.

He stood in the corner now, regarding his visitor with bleak discourtesy.

"You can darn well keep out of this, Jim Hanvey," he ordered. "I don't like fat men butting into my affairs."

"No-o? But it ain't me, Mike; it's my friend, Whalen."

"When did he get to be your friend?"

"From the minute he turned straight. I downright approve of crooks who quit the rose path."

"Well, I don't. They're no good, and ought to be in jail—and that's right where Mr. Harry Whalen is headed."

"But, Mike, you know good and well that this is a frame-up. You know Ackerman really did endorse that note."

"Let Whalen prove it then," snapped Lannigan. "Ackerman says he didn't."

"And you'd frame a nice young fellow like Harry?"

"I didn't say I would. But suppose I did? Suppose he didn't commit this particular offense? Hasn't he done a lot of other things he ought to be in jail for?"

"Like making folks understand what a fool you are, Mike?"

Lannigan towered over Hanvey's bulky form with his fists clenched: "For one nickel, Hanvey, I'd—"

Hanvey looked up and blinked deliberately. "Gosh, Mike, you ain't got a lick of diplomacy. I didn't come here to mix up with you. I came to see wouldn't you call off this campaign against Harry Whalen."

"Not a chance. He's going to get a nice long vacation, with all expenses paid by the State."

"How thoughtful you are. It's downright touching. Well—" Hanvey emitted a deep sigh, and heaved his vast bulk out of the chair. "Guess I better go tell him to get fitted for a suit of stripes. Because, when a clever guy like you sets out to frame a man, Mike, I reckon he ain't got a chance."

Lannigan's face was purple. "You ain't trying to kid me, are you?"

"Kid you? Golly! Mike, a feller couldn't really do that, could he?"

HANVEY reached the street and stared up and down the busy thoroughfare. His fat face was wrinkled with tiny lines of worry and, unconsciously, his fingers sought the gold toothpick which was his companion in times of mental stress. Then he waddled slowly toward the center of town, tremendous figure swaying slightly and overlarge clothes flapping grotesquely.

Ten minutes later found him in the presence of a thin, hawk-like man who stared at him in unfriendly fashion from under black, bushy eyebrows.

"My name is Hanvey, Mr. Ackerman, Jim Hanvey."

"Well," rasped the man, "what of it?" (*Continued on page 80*)

The Strange And True Story Of *One Modern Girl*

Rosamond Pinchot was born, as the old saying goes, "with a silver spoon in her mouth." Yet for the past four years, ever since she was eighteen, she has worked as hard as if she hadn't a penny—Part of her story reads like a fairy tale; but the rest is very different

By MARY B. MULLETT

ON a November afternoon in 1923, the steamship "Aquitania," en route to New York, made its customary stop at Cherbourg for passengers from Paris. Those who had embarked at Southampton were already on board; and as the tender came alongside, they crowded to the rail to watch the transfer of the later arrivals. A high wind was blowing; and the task of getting the tender safely up to the lee side of the towering "Aquitania" was a slow and difficult one.

While this was being done the passengers on the little tossing vessel below stood waiting, looking up at the long row of faces above them.

It was a situation which is repeated scores of times every year; but *this* time it was to change the whole course of at least one person's life.

Among the passengers on the "Aquitania" was a man, then fifty years old, who was famous throughout Europe and America. With a friend, he leaned over the rail and watched the scene below them.

Watched, at first, with mere idle interest. Then, as he caught sight of a girl standing on the deck of the tender, his casual glance became alert and intent.

Youth was written in every line of her tall, straight body. And in her face, as she looked up, he saw the luminous quality which also should belong to youth.

At his first sight of her, the man gave a quick start, as of recognition. This was strange, because he never before had seen her. Yet the recognition was there! For he instantly placed her, not as someone he had seen but as someone he had been seeking.

After a few moments of intent scrutiny, he turned to his companion.

"THERE'S the girl we have been looking for!" he said, pointing to the deck below them. "I want that girl as the Nun in 'The Miracle'."

The man was Max Reinhardt, the most famous theatrical producer in Europe. His greatest achievement, "The Miracle," was to be presented in America by Morris Gest; and Reinhardt was on his way to this country to direct its production.

Most of the members of the cast had been selected in Europe, but no final choice had been made for the rôle of the Nun. The part was an extremely important one. Every foreign actress who might possibly take it had been considered—and rejected. The problem was still unsolved until Reinhardt looked down into the face of an unknown American girl, and said: "There she is!"

The girl was Rosamond Pinchot. Her uncle, Gifford Pinchot, was nationally known, even before he became governor of Pennsylvania. The name of her father, Amos Pinchot, was familiar to all New Yorkers.

While the Pinchots did not count their wealth by millions, they were what most of us would call rich. In New York they had a delightful home just off Fifth Avenue, and they had also a country place in Pennsylvania. Their daughter had been educated in private schools and by travel abroad. On her return from this trip to Europe, she was to make her formal début in New York society.

Of all these circumstances Reinhardt was ignorant. He knew only one thing: he wanted this girl for the Nun.

After leaving Cherbourg, the "Aquitania" quickly ran into the storm of which the gale had been a forewarning. For two days most of the passengers kept to their cabins, and Reinhardt hadn't even a glimpse of the unknown girl from the tender. Then the weather moderated; and on the third evening there was a dance in the ballroom.

It was Miss Pinchot herself who told me what happened that evening, and of the amazing change it has made in her life. It is a story, not simply of one human being but of modern Youth itself—that riddle over which, in these days, there is such endless discussion.

"I was having a very nice time that night," said Miss Pinchot, "and when someone asked permission to introduce a stranger who had said he wanted to meet me, I thought he would be simply another dancing partner.

"However, instead of asking me to dance, the man surprised me by saying that he had been asked by Max Reinhardt to arrange an appointment for the following afternoon. Would I come to the lounge, one of the ship's salons, at two-thirty?

"I MAY as well confess that Reinhardt's name, at that time, had a rather vague significance to me. I couldn't imagine why he had asked for an introduction. And when my mother and I met him the next afternoon, I was still wondering what it was all about.

"At that time, he spoke no English; and my knowledge of German was decidedly sketchy. Still, I could understand a good deal of what he said.

"It was easier, for instance, to *understand* than to *believe* that he was actually offering me, an unknown and inexperienced girl, a leading part in a great play!

"I never had thought seriously of a stage career. At school, when I tried out for 'dramatics,' I failed; and the memory of this failure was so discouraging that I was bewildered now. But even in my bewilderment I was thrilled.

"Too intensely thrilled to give any outward sign of what I was feeling! I listened, apparently without emotion, while Reinhardt told us the story of 'The Miracle.' My mother wept over it. So, for that matter, did Reinhardt himself. And he was vexed and disappointed that I seemed absolutely unmoved.

"He was afraid, as he afterward told me, that I was incapable of deep emotion. But he is a man who does not easily change his first impressions. So instead of deciding that he had been mistaken in me, he asked me to recite something for him, hoping that this would show whether I really had any power to express feeling; or, for that matter, any feeling to express.

"But I had to tell him that I couldn't do this. I never had been the 'reciting' kind. I was too shy and self-conscious.

"I couldn't even explain that my coldness was all on the surface. Nothing in all my life had kindled my imagination as had this unbelievable chance; and I was terrified by the thought of losing it.

"That evening I walked the deck alone, trying to think how I could prove myself at least worth a trial. I lay awake most of the night. And the next morning I determined to attempt the only plan I had been able to invent.

"As Reinhardt could not understand English, I would pretend to be *reciting* something to him. But instead of that, I

DORA HOROVITZ

Rosamond Pinchot

would try to tell what this opportunity meant to me! How I would work and study and make any sacrifice to satisfy him!

"I reached this decision about ten o'clock that morning; and without waiting to let my courage ebb I went straight to Reinhardt's cabin. He was asleep, but I insisted on having him wakened!

"Later, I realized the extent of my temerity. In Europe, Reinhardt is almost a god. To disturb him when he was resting was like committing *lèse majesté*.

"I don't know that I should have hesitated, even if I had understood this, for I felt that my whole future was hanging in the balance, and I *must* win this chance.

"Pretending that I was merely reciting something, I tried to put my feelings into words; and because Reinhardt didn't know what I was saying, I could do it without self-consciousness.

"Before I had finished, I was crying. And he, although he couldn't understand a word of it all, was listening with tears in his eyes.

"Well, that settled the matter so far as Reinhardt was concerned. But we still had to convince Morris Gest; also, Otto Kahn, the chief financial backer of 'The Miracle' in America. When they learned that Reinhardt wanted to give so important a part to an absolutely inexperienced girl, they naturally objected.

"They believed I would be a failure. And of course I would have been but for Reinhardt's marvelous help. For a whole month, every day, and often for as much as five hours a day, he himself trained me.

"Fortunately, the rôle was not a speaking part, but called only for pantomime. To a trained actress, speech would have been a help. But to me it would have been, at that time, an insurmountable obstacle because of my shyness and inexperience. Even as it was, I had to work day and night for weeks before Reinhardt would let anyone see me in the part. Finally came the ordeal of doing it before Mr. Gest, who hadn't yet consented to let me have the rôle. I knew he did not believe I *should* have it! And when I came through the ordeal successfully, I felt that there was more than one 'miracle' in connection with the play.

"That test had been met; but I still had to convince Mr. Kahn, the court of final appeal.

"There were dozens of other applicants for the rôle. At the Metro-Goldwyn studio, where the rehearsals were held, these applicants sat together in a corner which became known as 'the Nun's pen.' I used to sit there, too; watching, hoping, fearing, until suspense became almost unbearable. (*Continued on page 97*)

When is a martyr *not* a martyr?
When she likes it!

As I watched her, bustling about with the little teapot Marice and Betty had used to have, I realized that I hadn't been mistaken that other day

Dot Tries To Help

"Poor Mattie Coates"

By Fannie Kilbourne

I REALLY had very little to do with what happened to poor Mrs. Mattie Coates, though Will, to his dying day, will insist that I am largely responsible. However, it is only honest for me to admit that, though it wasn't much, I did all that I could.

Living next door to people in the summer, when all the windows are open, is like having a good seat at the movies. Even more so, in fact, because you can't help hearing practically everything you don't see.

Without wishing to pin any medals on my own chest, I must say that I'm more particular than a lot of next-door neighbors. In fact, I even bend over backward that way. I always hang up the 'phone when I hear anybody else using our party line. Or practically always. And while we lived in the bungalow and Roger and Dulcie were right next door, whenever they would quarrel I'd turn on our radio loud so that I couldn't hear what they said.

When we moved into our new house we had no neighbors at all on one side, only a new little bungalow that had been put up for speculation and hadn't been sold yet. On the other side, just across a low hedge, was the Coates house, a big old-fashioned place with a cupola and a mansard roof.

UNIVERSITY OF IOWA

We hadn't been in our new home two days before I realized that if I was going to try to use the loud speaker to keep from overhearing the way things went in the Coates house, I'd wear out the B batteries.

As far back as I could remember, I'd heard Mother and Mother Horton talk about "poor Mattie Coates." However, till we moved in next door and I actually saw and heard for myself, I never really understood. The Coateses weren't poor at all in a money way. Mr. Coates owned the only hardware store in town and had done fairly well.

"Much good that's ever done Mattie, though," Mother Horton used to say. "Poor Mattie is a martyr to her family if there ever was one. When the children were little, and Thomas was just getting the store started, she worked like a dog. And now that the business is doing well and the children are practically grown up and where they should be a real help to her, not a soul does anything but impose on her!"

As I say, if I'd tried to use our radio to keep from overhearing the Coateses imposing on their mother, I'd have had the loud speaker on from dewy dawn to blackest midnight. And then some. Betty Coates was to graduate from high school in June; and for that high-school senior crowd, midnight is just the shank of the evening.

BETTY would arrive home at any old hour, bringing anywhere up to a dozen boys and girls along with her, and I'd hear her call:

"Mother, where's the ginger ale? Mother, did the boys eat up all that cake? Mother, isn't there anything to eat in the house?"

And pretty soon I'd hear poor Mrs. Coates's voice, and know that she had slipped a dress on over her nightgown and was down in the kitchen scrambling eggs or making fruit lemonade or something.

Usually while Mrs. Coates was downstairs, I'd hear Marice, the oldest girl, who was married and living at home with a husband and a three-months-old baby, call down sleepily:

"Oh, Mother, 's long as you're up, would you mind giving Tommie his bottle?"

It's perfect nonsense for a three-months-old child to be still having a two A. M. feeding; but when I hinted this to Marice she said if she stopped it Tommie'd probably cry every night for a week, and Phil couldn't stand it to hear a baby cry. Besides, she said, the night bottle wasn't any trouble! Of course it wasn't any trouble! Not to Marice.

Mrs. Coates would be up in time all right the next morning to get an early breakfast for Mr. Coates and Tom, their twenty-one-year-old son, and Phil, Marice's husband. Betty'd come sauntering down along toward ten o'clock, looking as fresh and pretty as a rose, and grumbling:

"Hominy again! Mercy, Mother, this coffee is stone cold!"

And Mrs. Coates, who'd probably be hanging some of Tommie's little white dresses out on the line, would come in and make fresh coffee.

Marice, who'd be all worn out already from having bathed the baby and made up his formula, would come and have a cup too, and sit gossiping with Betty while her mother stayed in the kitchen sterilizing the bottles.

It was grand for Marice. She ran around with the youngest married girls in town who hadn't had any babies yet, as free as any of them.

"Oh, Mother never minds keeping Tommie," she'd say complacently. "You know how crazy grandmothers always are over the first grandchild."

Which was all very fine; but then I'd see one of Mrs. Coates's friends stop by in a car in the afternoon and ask her to take a spin. And of course Mrs. Coates couldn't go, because Tommie was having his nap and she couldn't leave the house. So she'd move the sewing machine out on the up-stairs porch and work on clothes for Betty.

Phil was as proud of that new bungalow as a child with a new wagon, and he was as good about helping Marice with the baby as any of the other young husbands

And the boys were just as bad as the girls. Tom had one of those la-de-da positions in the music store that are very white-collar, but don't pay any salary worth mentioning. His father wouldn't give him any extra money. He said a young man should learn to live on what he earned, especially when he didn't have any board to pay. But Mrs. Coates was always slipping Tom a little extra.

I happened to know this, because she had picked out a spring coat for herself at Father's store. It was a little more expensive than she'd planned, and she asked Father to hold it for her till the first of the month. Father agreed to, because, as he said to Mother and me, while the girls dressed like millionaires, she looked so shabby he felt sorry for her. But long before the first, she went in and told him she'd changed her mind.

And then Scott, who was selling Tom a little car on time, told me that Mrs. Coates had come in and paid the last month's instalment on it. And the instalment was just the price of the coat she'd picked out.

HONESTLY, you couldn't help seeing that every one of Mrs. Coates's family, except maybe her husband, was perfectly willing to impose on her unselfishness. And yet she was the bravest little thing. The only one of the family that she ever complained about was Phil, Marice's husband.

"Of course he pays part of the grocery bill," she confided to me; "but it does seem that he might take a little interest around the place, mow the lawn once in a while, or something like that. But he never lifts a hand. I've asked him a dozen times to fix the sink faucet that drips, but he never remembers to bring home a washer.

"I wouldn't mind so much," she went on, "but it puts Papa all out of patience. And then Phil is always arguing about religion with him. I've never let one of my own children argue with Papa, and it makes me so nervous for Phil to. Every time they get to going it leaves me with a nervous headache. It's the hardest thing to keep them from saying something that they'll be sorry for afterward."

She sighed, a deep, terribly worried sigh.

There just wasn't anything Mrs. Coates didn't do to try to keep the peace, either. Why, one day in July, Marice was going to have some of her young married friends in for a porch luncheon, and she said, a day or two before, that she was just ashamed to have the girls see the hedge, it needed trimming so badly.

She said this to her father, of course. The whole family was out on the porch, and Will and I happened to be there too. Mr. Coates seemed to be feeling a little edgy at Phil, and he said that if Marice wanted the hedge trimmed for her party she could get her husband to trim it.

Phil said that he would, but, just as usual, he didn't get around to it. Mrs. Coates knew that this would make her husband mad, and so, the morning of the luncheon, I saw her out in the blistering July sun, clipping the hedge with the heavy iron shears, running into the house between clips to see about the luncheon, which of course she was cooking.

Betty was off playing tennis somewhere and Marice was sitting in the hammock under the trees fanning herself and watching the baby. She seemed to feel that it was very thoughtful of her to be taking the child off her mother's hands.

"What I wish," I said to Will at breakfast one morning, "is that Mrs. Coates would be taken sick."

Will just gasped at me.

"Well, for crying out loud!" he said. "Don't you think the poor woman's got troubles enough?"

"A good, healthy sickness wouldn't be a trouble," I said. "It would just be a rest. She'd have to lie in bed, and take it easy and be waited on. And that's the only way those lazy loafers will ever see how selfish they are. Unless she should die," I added.

Will didn't seem to realize how serious I was.

"Well, it's very decent of you to let her live," he said. "What particular sickness are you considering?"

"It isn't anything to make fun of," I said reprovingly. "I had thought of flu. They say there's a kind of summer flu going around in Verblen that leaves people quite run down. She ought to be practically helpless for a month at the least."

Will was just determined to take it lightly. He leaned back and fairly roared.

"You don't care what you do for a friend, do you! Talk about unselfish thoughtfulness! Why, you'd give one of them anything up to double pneumonia with complications."

"Indeed I wouldn't," I denied. "I've never thought of anything worse than flu."

And two days later, Mrs. Coates, who had gone over to Verblen to shop for Marice, came down with the flu. Will swears to this day that I wished it on her. And when Mr. Coates told us that the doctor said she was pretty well run down, and that he thought he'd send her out to her sister's in Colorado for a couple of months, Will was just knocked speechless. He teased me about what I'd done to that poor woman until, honestly, he nearly took my pleasure out of it.

I think Mr. Coates was quite worried about her, because he had things arranged before she had time to realize what was happening to her. She would have stopped it if she could. An hour before her train left, I ran in to give her a book to read on the way, and she looked positively stricken.

"I don't know what the children will do!" she kept saying over and over. "I don't see what's going to become of any of them without Mother. Why, Marice is the oldest, and she's just a baby." She caught my hand. "You'll keep an eye on them a little, won't you, Dotty?" she begged. "You're so competent and, being right next door, you'll know how things are going."

I patted her hand.

"I'll do anything I can for you, Mrs. Coates," I promised.

I FELT perfectly sincere in saying this, because I figured that the greatest thing I could do for Mrs. Coates in the long run would be just to stand back and let nature take its course in that household. Let her spoiled children learn to appreciate their mother. And I have to confess to a mean satisfaction at the prospect of watching them do it.

Of course, I didn't intend to be unneighborly. I told the girls that I'd do anything I could to help them out, and I invited the whole family for supper their first evening after Mrs. Coates had gone.

"If there's anything I can tell you about the house or baby," I said to Marice, "you must feel perfectly free to come over any time."

Though I'm only four years older than Marice, I should hope to say there were a lot of things about a house or a baby that I could tell her!

And she certainly did feel perfectly free to ask. I kept count, and the first morning she was over twelve times.

I was making blueberry pie for our own dinner the second day after Mrs. Coates had gone, so I made two, one extra big, and took it over to Marice. I have never seen such a mess as that house was. It was twelve o'clock, and the breakfast dishes weren't done yet nor the baby's washing. The men would be home in fifteen minutes for dinner, and she hadn't even put on the potatoes. I looked about.

"Where's Betty?" I asked.

"Up at Peggy Scoggins. She stayed all night there, and hasn't got back."

Poor Marice was ready to cry. And I couldn't blame her. It's no joke to have a great big house and family dumped suddenly on you, with a three-months-old baby besides. After having, so to speak, wished this on Marice, I couldn't help feeling sorry for her. There wasn't anything for me to do but stay and help her out with the dinner, which, of course, I did, my own being all ready to put on the table.

BUT, even feeling sorry for Marice, I couldn't keep up that sort of thing. I had a house and family of my own. I think it was supper time on the third or fourth night after Mrs. Coates had gone that Will and I heard irritated voices coming faintly across the lawn from our next-door-neighbors' house.

"I guess Phil and the old gentleman are at it on religion," Will hazarded.

We couldn't hear any of the words; but, as Will said, you couldn't miss the tune. You could tell that from mere general religious discussion it was getting more and more personal.

Suddenly, the voices reached an angry pitch in which we could almost hear the words. Then they stopped suddenly. We could hear the front door slam, and a minute later saw Phil striding off down the sidewalk as though he never meant to come back. It must have been an awful row.

But neither of us had any idea of how serious the quarrel really had been. The next morning I saw Marice on the other side of the hedge putting out the baby's things.

"We're going to move," she said.

"To move!" I gasped.

"Into the bungalow on the other side of you. Phil saw Mr. Collins about renting it, last evening."

"Well, for goodness' sakes!" I exclaimed. "What will you do about furniture?"

"Oh, we'll get what we really have to have, on time. We can manage all right on Phil's salary. We sat up till two o'clock last night, figuring it out." She paused a moment or two: "I—I— You always hear people say that no house is

Digitized by Google Original from UNIVERSITY OF IOWA

big enough for two families, and I guess it's so. Phil and Father . . . got into a little discussion last night . . . perfectly friendly, of course, but it sort of opened our eyes. Father expects a good deal of Phil, mowing the lawn and all that sort of thing, you know."

"Well, for cat's sake!" said Will when I told him about it. "That's a good one, for a man to take on a place of his own because he doesn't want to mow a lawn! He'll find that there's a lawn to mow around the bungalow, and that that's just the beginning."

There is something fascinating about a brand-new little house and all new furniture. It was the greatest fun in the world to help Marice get settled. Naturally, I saw quite a lot of her, and, in spite of feeling as I had about the way she'd imposed on her mother, I couldn't help liking Marice and feeling kind of sorry for her.

I saw her out in the blistering July sun, clipping the hedge with the heavy iron shears, while Marice sat in the hammock fanning herself and watching the baby

She was crazy about Phil, and really wanted to do the right thing, but, mercy, she was green as grass! Staying in her own home as she had when she was first married, she'd never had a chance to get used to living with just a husband, as you usually do before the babies come along. And here she was suddenly cast out on her own, not knowing as much as the average bride, and yet with a three-months-old baby.

She found out quick enough now that the two A. M. feeding was some trouble, and decided to break it off.

"I don't know whether Phil will be able to stand hearing Tommie cry," she said dubiously.

And right there I gave her a piece of excellent advice.

"Listen, Marice," I said, "Tommie's Phil's baby just as much as he is yours, and you can't wear yourself out trying to conceal it from Phil that he's a father. Every married girl will tell you that it's a very hard time while your first baby is little, and that you and your husband just have to pull together on it."

Will and I were surprised to see the way Phil seemed to take hold. Just hearing Mrs. Coates talk about him, I'd got the feeling that he was terribly lazy and selfish. But he was as proud of that new bungalow as a child with a new wagon, and, as far as I could see, he was as good about helping Marice with the place and the baby as any of the other young husbands.

Will and I strolled over there after supper one evening, and if there wasn't Phil mowing the lawn! Will's an awful tease and he couldn't resist kidding Phil about it.

"Thought you moved so you wouldn't have a lawn to cut," he said.

Houdini's Conquest

He gives a séance that baffles Theodore lifelong ambition by filling his mother's apron from a Federal prison cell, releases the prison-up again; he is buried under six feet of earth,

By Harold

HOUDINI'S conquest of America began in the fall of 1905, when he opened at the Colonial Theatre, New York, as a top-liner, at the beginning of October. He was thirty-one, and had been working for this large occasion for nearly fifteen years.

Within the next few months, his feats carried his name all over the country. His first big publicity strike occurred in Washington, and it forthwith established Houdini's reputation in the United States.

During the first days of his brief engagement at Keith's in Washington, Houdini broke out of several of the police jails of the District. Warden Harris of the Federal prison was confident that his locks would hold the elusive performer, so he invited Houdini to test his skill against Uncle Sam's system of restraint.

Houdini elected to be locked into the cell that had housed Charles J. Guiteau, the assassin of President Garfield. This was the middle chamber of a row of three heavily-barred cubbyholes, walled in solid masonry. It happened at the time to be occupied by a man who had strangled his wife.

The narrow door of this cell is sunk three feet in the brick wall. When the door is closed, an armlike bar projects out into the corridor and then angles to the right and slips over a steel catch which sets a spring, fastening the lock. The lock is a combination, with five tumblers.

After being stripped and searched, as usual, Houdini was locked in this cell, and his clothes were locked in another. Warden Harris, with his staff of deputies and a crowd of visiting police officials, retired to his office to await developments.

Houdini was out of his cell and in the corridor in two min-

IN THIS, the fourth article about the great magician and his tricks, you see him at the peak of his glory, and at the beginning of his efforts to communicate with the dead. The article next month, "Houdini and the Spirits," will tell you of his spectacular experiences with fake mediums, and of his crusade against fraud.

Houdini submitting to a test of blood pressure before being sealed up in an air-tight coffin and sunk in the swimming pool of the Hotel Shelton in New York. He remained under water for an hour and thirty-one minutes

Of America

Roosevelt; he gratifies a with gold; he escapes ers and then locks them but comes to the surface

Kellock

utes. As he looked about him, he was seized with a whimsical idea. There were eight other prisoners in the jail—two condemned murderers, four men under indictment for murder, two serving for other major crimes. Houdini successively opened the cell of each one and hustled him into another cell, where the man was tightly locked up. Houdini was still stark naked, and each prisoner was so amazed at the apparition of this unclad, authoritative intruder that he neither protested nor made any attempt to escape. Twenty-one minutes after Houdini had been locked up he entered the warden's office with his clothes on.

"I let all of your prisoners out," he announced, and, as his hearers stared at him, first incredulously and then in dismay and a guard or two jumped toward the door, he added hastily, "but I locked them all in again."

Naturally this puss-in-the-corner game with a jail full of prisoners captured the imagination of the Washington correspondents.

In Boston, two months later, Houdini repeated this stunt with variations. Superintendent of Police William H. Pierce locked him in a second-tier cell of the city jail, after he had been stripped, searched, manacled, and leg-ironed, and locked his clothes in a cell in the first tier, in another section of the prison. Twenty-three minutes later Houdini called Superintendent Pierce on the telephone from Keith's Theatre, some distance away. He had slipped out of his cell, recovered his clothes, dashed up to the third tier and released a prisoner, whom he locked in his own second-tier cell, let himself through two steel doors into the prison yard, climbed the wall and jumped into a waiting automobile. He was over the wall sixteen minutes after he had been locked up and the drive to the theatre took seven minutes.

WHEN Houdini capped this feat, a few nights later, on the stage of Keith's Theatre by escaping from a witch's cage procured by an ambitious chief of police in Chelsea, he completely won New England. The cage was a vicious-looking contrivance of latticed steel, the upper frame of which fitted closely about the subject's body. A series of chains were wound about the prisoner and enmeshed among the bars. The whole affair was locked with a system of padlocks. The mayor of Boston, accompanied by the whole city administration, watched while Houdini was encased in this barbaric apparatus, and over three thousand persons waited for upward of an hour and a half until he managed to push aside the clanking irons and step out of the vise that had held the witches of Massachusetts Colony. Probably he would have received the keys to the city, if presenting keys to Houdini had not been so obviously superfluous. Boston, a one-week town for vaudeville acts, kept Houdini for eleven consecutive weeks.

About this time Houdini performed an ingenious bit of magic, which, in the opinion of those who witnessed it, could be explained only on the theory of supernatural powers.

The demonstration occurred at a matinée at the annual meeting of a social organization in the upper part of Manhattan, New York City. Houdini borrowed three handkerchiefs, tied them together, and announced that he would make them vanish and reappear at any place suggested by any person in the audience. The handkerchiefs, being placed by Houdini under a small glass bowl, immediately disappeared. The audience was supplied with blank cards, on which each person was to designate the place where he wished the handkerchiefs found. The ushers collected the cards in a hat, each card folded to hide the writing, and Houdini shook them up and then dumped the lot upon a huge platter, from which he picked three and asked that some disinterested person make the final choice from these. A baby was selected to choose the card, and a skeptical member of the lodge took it from the baby's hand and read it. It demanded that the handkerchiefs be transported to the top step of the pediment of the Statue of Liberty, in the middle of New York Harbor.

Murmurs of surprise and incredulity came from the audience. They supposed the test would be too difficult; but Houdini expressed the opinion that the handkerchiefs would be found. A committee was organized among the spectators to make the long trip, half an hour or more to the Battery by subway and then across the harbor in the ferry. On the top step leading to the statue, as designated, they found a soldered tin box, and returned with it to the hall, where, by that time, a banquet was being served. A mechanic was called in (*Continued on page 126*)

Violet Ray, home from the city, sets out to raise the fallen soul of Branford to her own artistic level

STAR DUST

FOR the moment the Red Cross Pharmacy was enjoying a happy freedom from boss and customers, so George Steemeyer, the drug clerk, approached the soda fountain and thus sought cooling refreshment:

"Hey, Emory, give us a little shot of Veezo, won't you?"

"Absolutely, George."

The soda jerker, Emory Gault, had a reputation in Branford as a wise-cracker, a village cut-up and a drug-store cowboy, and he worked long hours to defend his title. He belonged, as a local wit said, to the "sundae school" of comedy. He was a humorist with tongue and fingers; furthermore, his ears were large and flappy and his forehead started just above his eyebrows and ran back by an easy grade to his summit. People approached his glistening marble counter with faces all set for laughter.

"Oh, slap-stick comedy!" exclaimed Violet reproachfully. "One must aim no end higher than that, mustn't one?"

Emory seized a glass with his left hand and tossed it to his right. It slipped from his fingers and fell, but he gracefully picked it out of the air about a foot from the floor. Girl customers were supposed to scream at this performance. The practical joker now drew a drink for his fellow employee, put in cracked ice—also, secretly, a white tablet—and set the fizzing ruby beverage before his guest.

"Wait a minute, George, it looks funny."

The two white-coated young men gazed at the liquid. It seemed to have lost its redness and become pink, now a pale rose; in another moment it was quite colorless.

"I must have given you the wrong number. 'Scuse it, please!"

Emory laughed heartily and threw away the experiment in chemistry.

"That's a new one on me," said Steemeyer, sipping his fresh glass of Veezo.

"It's a little stunt I learned from a prescription clerk in Three Falls."

"You're wasting your time jerking sodas, Emory. You ought to be on the stage with your juggling stuff and wise-cracks and all."

"Sure; I know. If I could get a good girl partner and somebody to finance a comedy team, I bet I could break into the big time."

"And get off some of them funny stories of yours."

"Say, listen, George. Here's a hot one. Stop me if you've heard it. It seems there were two traveling men—"

EMORY'S hot one was stopped, not by George Steemeyer but by the entrance of a customer, a young woman who did not crave cooling drinks, but certain dye stuffs. George was obsequiously polite to this patron, and Emory, who was rather a newcomer in Branford, wondered who she was.

The girl was good-looking in a pale, willowy way, with a haircut of uncommon shortness. She had low-heeled shoes, a smock of dull orange and a kind of studied carelessness in her general effect. When she was going any place she first drooped herself

As he gave sustenance to his famished monarch, he fumbled the glass and picked it out of the air in the vicinity of his bare knees

By Howard Brubaker

in that direction and then followed the droop. Also, Emory noted, her words came out in a series of abrupt little explosions.

"And now, who is your fat friend?" he asked, when the stranger had drooped herself out into Main Street. "She sounds like a motor-boat."

"That," answered the drug clerk impressively, "is Violet Ray."

"All right—if you don't want to tell!"

"I'm not kidding. That's the daughter of Seth Ray, the plow-handle manufacturer. They named her Violet before anybody knew about ultra-violet rays and that stuff."

"Kind of dates her back, doesn't it? Back when guys wore derby hats."

"And they sold drugs in drug stores," said George.

"But why hasn't Violet had the pleasure of meeting me?"

"Because she's been in New York for a couple of years. Her father just brought her back here recently. They say she wanted to stay in the East, but old Seth thought different. They tell me he found Violet living in a Greenwich Village stable, down an alley. That didn't go so good with the richest man in Branford."

"What did she do there, if anything?"

"What *didn't* she do? A little of everything I guess—painting, sculping, writing poetry, dancing, acting, hammering brass, dyeing cloth, tinkering old furniture—"

"WELL, now we got her, what are we going to do with her?"

"What's she going to do with us, you better ask. I hear she's all set to uplift us, make us more artistical, teach us to express ourselves. She'll get even with us because she has to live here. She's going to take Branford all apart and put it together better."

"Fat chance!"

"You don't know Violet. She's got a lot of influence with the younger crowd, and new ideas and energy—"

"And Papa's mazuma," added Emory.

The soda-fountain man now abandoned idle gossip to prepare some cucumber sandwiches for the lunch-hour trade, but a keen observer would have said that his heart was not in this form of self-expression. There was a grotesque seriousness in his comic-strip face, and in his eyes the look of one who sees visions and dreams dreams.

THE garrulous Mr. Steemeyer had told the truth as he saw it, but even a drug clerk does not know everything. It is true that Seth Ray had found his daughter living in an alley stable; but it was a converted stable in a glorified alley in a row of picturesque studios, commanding rents which few working artists could pay.

While Violet was running wild through all the arts and crafts, she kept one hand in Papa's pocket. The plow-handle prince might have borne this a little longer; but Violet had discovered that she now needed to take her personality to Paris for a couple of years to get it properly developed. This brought on a crisis—also, a stubborn Middle-Western father. Violet did most of the talking but Seth did all of the deciding. She did not get Paris; she got Branford.

"If you want to express yourself," said the secretary of her treasury, "you can do it home with Maw and me. If you can't stand the house, you can live in the barn. We don't keep a horse any more."

A warm controversy was thus revived. The Ray mansion was a product of the elegant eighties, bristling with steeples, cupolas, cornices, and ornamental hardware. Seth still saw this residence as an architectural gem; Violet said it was a ghastly mid-Victorian nightmare.

Upon her return home she moved that it be torn down and a lovely Colonial house built in its place. The motion was lost by a vote of two to one. She next tried to have some of its curlicues sheared off, and failed. Soon she advocated some colorful window curtains of that terribly successful pastel

"Carrington Hepplewhite!" she cried. Lafe Barrett was so startled that he spilled hot sparks on himself from his corncob pipe

shade used in the Pink Rhinoceros tea room in Sheridan Square. Mother did a little self-expressing at this point. She had never seen a pink rhinoceros and never wished to see one, and her windows would be draped in velvet and lace as long as she kept her health and strength.

So Violet made a studio out of the barn, had a big skylight put in, small-paned windows, new floors, antique furniture, and hooked rugs.

"It would have been cheaper," sighed Father, "to let her go to Paris."

"But we have her with us," Mother answered. "And I think it's real pretty the way she's fixed it up with those bright curtains and all."

FROM her artistic dug-out Violet made attacks upon the cultural life of Branford at half a dozen points, at most of which she was repulsed. It was not until August that she made her first visible dent upon the face of Branford. It was not as deep as a well nor as wide as a church door, but it brought gladness into the life of Mr. Emory Gault.

The soda-joker was driving home to supper in his rickety old flivver, upon which there was always some bright saying printed with chalk. For several days the car had borne the witticism, "Teachers pet —I'll say they do." Mr. Gault turned from Main Street into a side thoroughfare and was about to pass the little second-hand store run by Miss Arline Biggs, when he stopped his chattering car and wrinkled his low retreating forehead in amazement.

Miss Biggs, it seemed, no longer ran a second-hand store; over its doorway was an artistic sign, "Ye Olde Gift Shoppe." The formerly dingy windows flaunted draperies of brilliant lemon-yellow, and through the open door one got a good view of little Miss Biggs brightly arrayed in green.

A grin now spread over Emory's unlovely face. Upon reaching his boarding-house his first act was to sponge that educational note from his flivver, and to write in its place: "Ye Olde Henrye."

It was no secret that the transmutation of the second-hand store into an "Olde Gift Shoppe" was the work of the heart, hand, and brain of Violet Ray. Miss Arline was small, meek, and easy to uplift. The hand-lettered sign and the gaudy curtains were the output of the barnyard studio, as were also certain art objects of copper, brutally hammered, and a little piece about the enterprise in the "News-Sentinel."

The witty flivver was parked in front of the drug store the next day. In the afternoon, Joe Spengler, the barber, ran in to refresh the inner barber, and Emory asked:

"How's ye oldy barbery shoppy?"

One thought led to another, and he was about to tell Joe an exquisite little thing that Pat said to Mike when the screen door opened and in drooped Violet Ray. It seemed to be her mission in life to spoil Emory's jokes.

"Mr. Gault," she said earnestly, "I want to thank you for your helpful publicity for little Miss Biggs. Everybody is talking about it. It was kind of you no end."

Emory blushed until his face was the color of a drink of Veezo.

"We strive to please!" he stammered.

The great producer touched him lightly on the shoulder. "I predict for this young man a brilliant future as a comedian"

When she was gone he said to the grinning barber:

"I don't believe that a certain party could see a joke if the joke came up and bit her."

"You should worry," Joe replied. "*You're* in right with her."

AS EMORY passed his hours at the bitter toil of putting sticky substances on ice cream, that far-away expression returned to his facial scenery; he looked at Main Street, but what he saw was Broadway.

The community, worried by Violet's persistent attacks and wondering where the next blow would fall, breathed a sigh of relief when it learned that the uplifter, worn by her labors, had sought relief from the August heat at the Ray summer cottage at Lake Runkokomo. The town's institutions were now declared out of danger.

This was false optimism, for the very flower of Branford society was in that row of cottages "up at the Lake," and Violet found work for idle hands to do. Disturbing rumors filtered back into the dusty town, and when September brought the said flower of society home it came not as a disorganized mob but as "The Strut and Fret Club"—pledged to raise the fallen soul of Branford with the drama.

"Violet Ray thinks you can have your soul lifted just as you can have your face lifted!" Thus Joan Jameson Berwick spoke to her young husband, Alonzo Theophilus.

Joan had been present at the scene of the crime at Lake Runkokomo. This was her first evening at home, and the newly-weds were enjoying a family reunion after two bitter weeks of separation.

"DID you join this troupe?" asked the rising young banker—only he wasn't rising now, but lolling in a deep chair. His wife came in the misses' size and her bobbed head reached to her husband's shoulder. In fact, it was there now.

"Yes, Lon, I joined the club. You know I've always been a nut on the educational value of play-acting. Violet has some queer ideas, but she knows a lot about the stage, really. She often played small parts in the famous Woodbox Theatre, in New York."

"It's not very famous with me," said Lon. . . . "I like the way your ears are built."

"They've stood a lot of punishment lately." Joan gave a fair imitation of Violet's combustive style of speech. "Dramaturgy, intelligentsia, cognoscenti, imagery, good theatre, motivated, civilized, intriguing, overtones, bourgeoise, Babbitry—my mind is a scrambled egg."

Presently Alonzo asked:

"What show are you goin' to put on first?"

"Don't drop your g's, darling. Why, the first play is 'Stardust,' a terribly effective bit from the Czechoslovakian. It's by Dgaszbann—you know Dgaszbann's work, of course."

"I never heard of him."

"That's what I said to V. R., and all it got me was a sweet look of pity. That's the way she browbeat us all. I heard her say to Betty Gates: 'It would be no end amusing to have a prologue, don't you think?' Poor Betty didn't know a prologue from a saw log, but she answered, 'Yes, I think that would be absolutely spiffy.' So Violet is going to design a cunning skimpy (*Continued on page 71*)

Dime Wise And Dollar Foolish

By

CLARENCE BUDINGTON KELLAND

I DID some comparatively unimportant act the other day and, having acted, it occurred to me to be curious as to why I had done it. Then I began to wonder why I did everything, with the result that I discovered myself to be a very interesting person indeed—to myself! I reached one matured conclusion, and that is that every human being in the world is the most interesting and fascinating person in existence—to himself. If he takes pains to observe.

I believe somebody, at least once, has said somewhere that we are complex organizations, contradictory and bewildering. He was right, and I am prepared to admit that I am the most complex, contradictory, inexplicable, and bewildering individual of you all. And so are you. I would admit it about you, only I can't see your machinery going, the way I can my own.

I am in a business; namely, the writing of fiction—which the layman looks upon with some admiration, but with more toleration and amusement. An author, like a painter or a musician, is supposed to be a queer fellow, a sort of mitigated lunatic, dependent upon inspiration, and given to weird humors. We are supposed to be temperamental and peculiarly volatile; and the legend runs that we are quite unfit to cope with normal man in the arena of life and business. There is a tendency to be kind to us and to make allowances. In short, we are endowed by the commonality of mankind with the taint of genius.

Now, being an author, why don't I act as one?

I know numbers of writers and artists and composers and singers who do act that way. But I regret to say that I miss all that fun. I envy them. I'd love to be a semi-mad man with a license from the public to cut up capers. But I find myself to be a pretty average commonplace sort, dependable, as editors will tell you, and not given to throwing cat-fits. I seem well able to cope with normal man in the stadium of business, and I've never seen anybody making allowances for me. And, heaven knows, I'm not seasoned with genius. I work.

Why do I behave that way?

I am, in my natural state, one of the laziest human beings alive, and yet I work harder than most folks. I could get along and eat three times a day and support my family decently by doing half the work, or, maybe, a quarter. But I find myself going at all times to the limit of my potentialities. Why? Is it because I covet money? Is it because I love my work for its own sake? Or is it because I have to be contradictory out of perverseness?

By temperament I am a rebel, and by thought a radical. I imagine few folks hold sincerely as radical views as I do upon what is right and wrong, upon morals and human relations and ultimate justice. Yet, in face of this, when it comes to concrete living I am about ninety per centum conservative. I think one way and act another. Now, why is that?

I am irritatingly economical—even niggardly—about small expenditures, and a hopeless spendthrift in big ones. I will argue and labor and stir up all sorts of trouble, to save a dime, and then go out and get rid of a large sum without a thought. I work and worry over little problems, and decide big ones offhand. Now, why do I act that way?

ABOUT the spending of money—suppose we inquire into that, and see where we come out. I think the solution lies back in history. When I was a youngster, my family was not opulent. Whatever their desires may have been, they could not lavish money upon me. I do not mean that we were poverty-stricken. There was always plenty for a bountiful table, for decent clothes, and something to put in the collection plate on Sunday. And a bit to put by for a rainy day. But with money as money I was almost unacquainted. If I had asked my dad for five dollars in one piece he would either have fallen off the front porch or laughed himself into a decline. If one of my kids should come to me and ask me for money, and I ventured to give him a dime—he would either fall off the front stoop or laugh himself into convulsions. But to me a dime was a dime! I have saved for weeks and months to have a couple of dollars to be (*Continued on page 112*)

Rock strained his eyes to take in all details of that red-scarfed rider's appearance, so he might recognize him some day

Sunset Pass

By ZANE GREY

Illustrated by
W. H. D. KOERNER

A BELL awakened Rock from late slumbers. The sun was up, and as he peeped out over his blanket covering he saw the grass shine gold under the cedars. He had overslept, which was not a remarkable fact, considering how long it had taken him to get to sleep.

While performing his ablutions his thoughts whirled, and then steadied to the stern consideration of the task before him. In the sober light of day it seemed tremendous. He had to prove his suspicions, which had lost no strength during sleep, and if they were well founded, then he must somehow stop the illicit proceedings before the Prestons were overwhelmed by catastrophe.

Briskly he strode toward the double cabin, conscious of heart-beating anticipation, and when he thumped upon the porch Alice Preston came out of the kitchen, carrying plates and cup, which she set upon the table. She smiled at him. How pretty she was!

"I'm ashamed, Miss Alice," he said, as he stepped over the bench. "Think of a cowboy late on his first mornin' of a new job! But I promise it'll not happen again."

Rock made short work of his breakfast and, glad somehow that he had not encountered Thiry, he hurried away down toward the corrals. At the barnyard he found Al Preston leading in some horses; and one of his brothers was jacking up a hind wheel of the green wagon.

"Mornin', Boss," drawled Al.

The other boy nodded at Rock.

"Are you Tom or Harry?" asked Rock, suddenly reminded of the twins.

"I'm Harry."

"All right, Harry, I'll know you tomorrow or bust. Where's Tom?"

"He went off after a horse for you."

"For my white horse, Egypt?" asked Rock.

"No, I'm—sorry to say. Ash saddled *him* and rode off on him."

Rock for the moment succumbed to a silent fury. But seeing the gray-eyed brothers watching him curiously, keen to catch how he would take this first move of Ash's, he thought he had better explode naturally and wholesomely, as might any cowboy.

"—— ——!" he yelled lustily. "He took my new white horse! And my saddle that I wouldn't lend to the King of England! Dog-gone! Boys, was it supposed to be a joke?"

"JOKE nothin'. Ash was just mean, like he always is when we get a new rider. But if you take my advice you'll swallow it—leastways till Ash comes back. If you follow Ash now, mad as you are, there'll only be another fight."

"Take it as a joke. Or, better, be nice about it," added Harry. "That always stumps Ash. If he can't make you mad, he lets up—for a while, anyway."

"Thanks, boys. I'll think it over," rejoined Rock, grateful for their solicitude.

"Let's get to work," suggested Harry. "We're late. And Ash ain't the only one Pa can cuss."

While Rock and Al greased the wagon wheels Harry hitched up, and by the time this task was done Tom rode in leading a horse. It was a bay that instantly took Rock's eye, and which would have made up for the loss of almost any horse, except one like Egypt.

"Where's Ash's saddle?" he asked.

"It's hangin' there. But, gee, you won't ride his, will you?"

"I'll be darned if I won't," returned Rock, with grim humor. "You boys rustle along. I'll catch up."

When Rock rode around the barn he espied the wagon far ahead down the gentle slope. He moved on at a trot, his mind busy. He came to the forks of the road, and, taking the left one he entered the cedars, climbed the ridge, and descended to a

Synopsis of the Two Preceding Instalments

TRUEMAN ROCK came back to Wagontongue after six years' absence, to greet his old friends and pass on again. But in Sol Winter's store he met a girl—"that strange, wild, lovely Thiry Preston"—and changed his mind about passing on. But he was troubled by the sadness in her eyes, and by the ugly rumors he heard everywhere about her family, the "thirteen Prestons of Sunset Pass." They were led by the oldest son, Ash, a sinister figure in all the whispers, and they were making more money than even the wide extent of their ranching operations seemed to justify.

On his first day in town Rock was accosted by the drunken Ash and ordered to keep away from his sister. He threw Ash down, went back to the store and gave most of his money into Winter's keeping, bought a magnificent white horse, and set out for the Preston ranch, sixty miles away. He stopped to talk to Adam Pringle and Jess Slagle—only to hear new whispers against the Prestons. Slagle openly accused Ash of dishonesty of some kind, and they both repeated the warnings Sol Winter had given True.

Arrived at the ranch, he encountered Ash, who tried to send him away. Gage Preston interfered, and gladly gave True the job of overseeing his younger sons in their share of the work on the range.

True met all the Prestons—and liked them as much as he hated Ash. There was Alice, younger than Thiry; several older brothers; Al, Tom and Harry (the twins); Mrs. Preston, and several youngsters.

But True's suspicions were not put to rest. And on the very first night Thiry came to him and implored him not to stay. More troubled than ever, he promised to give her his decision the following night, at the same place, under the trees.

UNIVERSITY OF IOWA

fragrant, grassy, open meadow, only to mount another cedared ridge.

It was not long before the sweet sage wind suffered a change and became tainted. Rock rode up a sparsely cedared slope to a level bench, and soon came upon the site that had once been Slagle's ranch. The boys were halting before the several cabins. As Rock rode up, the stench unmistakably heralded a slaughter-house. Cabins, corral fences, barns and sheds, and even the trees bore ghastly evidence of the nature of that to which this old Slagle ranch had sunk. Skins of cattle hung everywhere.

A strange and thrilling drama of frontier days

THE horses were turned loose to graze, and Rock, with the three boys, set to work. It was no easy task for one man, or even two men, to fold a stiff hide and compress it into small space. But that was what they had to do. As the day grew warmer, the odor increased. Rock did not drive the boys, but he drove himself. He heard Al say to his brothers in an aside, "Sure, he's a hawg for work."

Nevertheless, during this labor, and while joking with the brothers, Rock was bending all his keen faculties toward the end that he had determined upon. Nothing escaped his sharp eye, yet during the half-day that it took to complete this job, he did not observe anything that struck him significantly. Toward late afternoon, however, he happened to kick a piece of white substance, not stone and of a color markedly contrasting with the red earth. He smelled it—tasted it. Quicklime! Rock put it in his pocket.

The hides done, Tom mounted the loaded wagon to drive home, while the other brothers rode off toward the woods, each now with a rifle over his pommel, and Rock was left alone.

He took out the piece of quicklime. It did not appear to be very old. He looked around where he had found it, to see if there was more. After diligent search he found a smaller piece. Quicklime, in any quantity there, might be used to deaden the stench of decaying offal, blood, and bones. Rock searched all the cabins, sheds, bins, without finding any more. None had ever been used upon the horrible pile that had accumulated in the hollow below the slaughter-house.

Manifestly, the Prestons left the entrails and skeletons of their cattle there on the ground to rot. No need to waste valuable time destroying what the elements, the dogs, coyotes, and hogs would soon do away with. But they might have left something here that they wanted to destroy quickly. Hides! Cowhides they could not sell, because these did not bear their brands!

ALL of a sudden, into Rock's searching mind there flashed memory of a deep well he had once helped to dig on these premises. Slagle had wanted to get water close at hand, to obviate the necessity of packing it up-hill from the brook. But they never struck water, and at eighty feet had abandoned the effort.

Since that time brush had grown heavily all around the

Her eyes flashed in doubt and fear from her father to Rock. "Dad," she whispered, "are you crazy—or am I? You couldn't joke—"

Digitized by Google

Original from UNIVERSITY OF IOWA

ranch-houses, but after some search Rock located the well. The edges had weathered, widening the mouth. He could not get right to the brink at this point. On the opposite side, however, opened a break in the brush. He was about to crash his way through the bushes around to this opening, when caution urged him not to leave a trail. Carefully he retraced his steps, worked around into a narrow path, in which he saw boot tracks.

Reaching the well, Rock peered down. He saw only the gravel sides and the black hole. He dropped a stone into it. No sound! Selecting a larger one, he leaned over and let it fall. The hole certainly was deep. A low, soft thud, barely distinguishable, came to his taut ears.

"By gum!" he ejaculated. "That well had a rock bottom."

He cautiously stretched himself on the ground, and, putting his head over the brink of the well, he sniffed like a tracking hound. He caught a faint scent of something that was not earth or brush and certainly not rotting hides. And it was rotting hides which he expected to smell.

Resting a moment, he tried again. This time he caught the scent strongly enough to recognize it. Quicklime! Rock sat up, suddenly sweating, though he felt a cold chill. He felt no doubt that down this well, hundreds, perhaps thousands, of cattle hides had been dropped—not one of which bore the Preston brand.

Rock crawled on hands and knees back along the edge of the path, making certain not to leave the slightest mark. When he got to the boot tracks he scrutinized them with the photographing eyes of a trailer of long experience. He cut twigs from the under side of a bush, and with minute care measured the length and breadth of the most clearly defined print. These twigs he stored in his pocket.

He retraced his steps back to the open, and, saddling the horse the boys had brought up before they left, he mounted, and rode quickly away to get out of the stench.

The daily phenomenon that gave this Pass its name was in full and glorious sweep when Rock reached his cabin. Weary and worried as he was, he had to sit down and watch the beautiful end of day.

There were fewer clouds, and these hung round the distant peaks, as if anchored to the steep higher slopes. Strange to see no gold in this sunset! But pearl-gray and silver sheen and shell-pink filled the great gap of sky. The curtains and shafts of colored light were wanting too. Yet, withal, there was exquisite beauty, rarer, more delicate, quickly evanescent, and soon gone.

Rock shaved and changed his clothes. He made sure, this evening, to be on hand before the first supper bell rang.

All the younger members of the family came at the call. The children romped from one side and the boys raced from the other. Alice, who had rung the bell and called gayly, "Come and get it," took her seat beside Rock.

"We're livelier when Ash and Pa are away," she said, smiling.

"So I notice. Sure hope they stay away long," he replied, remarking how singularly she spoke of Ash before her father.

Thiry, as before, sat opposite Rock and when he could summon courage to look straight at her he suffered another twinge at the enhanced sadness of her face.

Nevertheless, Rock had such hold on himself that he amused and interested Mrs. Preston, brought smiles to Alice's face and shouts of glee from the children. But as soon as he had

Digitized by Google
Original from UNIVERSITY OF IOWA

finished supper, he excused himself and, seeking the gloom of the pines, he gave himself up to turbulent anticipations.

The moon appeared long in rising and Rock, patrolling a beat under the trees, both longingly and fearfully watched for the silver radiance over the rim. It came at last and found him unprepared. How could he bear to terrorize Thiry Preston by confessing his determination to stay?

At length he could no longer procrastinate. Skirting the edge of the pines he circled the slope, and coming to the stream he followed that up to a level, and soon found the great pine under which he had talked with Thiry the night before. The far side of the Pass was blanched in moonlight; this side was dark in shadow. Rock was unable to see the rustic seat until he could almost touch the tree.

To his mingled relief and disappointment Thiry was not there. He sat down to watch and think. A light shone through the curtained window of her cabin.

Trueman could not rally any connected thoughts. He must wait until she came—until he could see and hear her. That moment would liberate him. He had waited at a rendezvous for many a girl—a situation always attended with pleasurable and sometimes perplexing sensations; but this was not the same. How tremendous the issue of this meeting!

He heard the cabin door open. A broad light flared out into the gloom. Then Thiry appeared in the doorway, clearly defined. She wore white. She had changed her dress since supper. Trueman's heart gave a leap, and then seemed to stand still, while she stood peering out into the night. She closed the door behind her—vanished. But Rock heard quick, light footfalls. She was coming.

Presently her pale form grew more distinct. Rock saw her put out her hands, feeling for the tree or the bench. But before she touched either, he reached up to take them.

"Oh!" she cried, evidently startled. "It's you, Mr. Rock."

"Yes." He did not let go of her hands.

"You're . . . late. I—I've been here twice," she said.

"I'm sorry, but it took courage to come at all," returned Rock.

"Didn't it, though? . . . Mr. Rock, you—you are holding my hands. Please let go, so I may sit down."

He released her and leaned back against the pine, conscious that her presence had ended his uncertainty. She sat down, quite close to him, and bent her head forward a little, as if trying to pierce the gloom.

Suddenly the moon slipped up over the black rim, and, magically, the darkness lightened. A silver radiance touched the girl's hair and face.

Rock, his own features in shadow, watched her, and waited. The hour seemed to be the most momentous of his life. The night wind, sweet and balmy, was moving up from the Pass, roaring low in the tree tops. How innumerable the nights he had listened to that music, always with a sense of its potency, of its message! And the time of its fulfilment had come.

Rock had met penetrating glances before; and this one shot little cold sparks along his marrow

"Ash stole your horse?" she began, tentatively.

"Reckon I wouldn't say 'stole.' But he sure borrowed Egypt."

"*Egypt!* . . . I knew you named him that."

"Yes. Much obliged to you."

"Who told you?"

"Lucy. I've a stand-in with her."

"So it appears. . . . I *should* be pleased that you called Leslie's horse by the name I gave him. 'Most everybody knows. Ash certainly knows. And—that's why I can't be pleased or flattered."

"Lucy was, anyhow. She said you loved the horse."

"Oh, I do. I used to ride him. How glorious it was! . . . But Ash caught me once; and then, (*Continued on page 170*)

The Rev. Francis Tondorf, a Jesuit priest of Georgetown University, Washington, D. C., is a world authority on earthquakes. In his finely equipped station on the heights overlooking the Potomac River he studies the tremblings of Mother Earth as a physician watches the pulse of a patient. Father Tondorf was born in Boston in 1870. In 1911, when the Georgetown Seismological Station was established, he was appointed director, and has remained in charge ever since

There'll Be 9,000 Earthquakes *This Year!*

An average of one an hour, and each one will leave its address at Father Tondorf's station

By George W. Gray

IN JULY, 1927, newspapers flared with headlines of an earthquake in China. You may recall the story—a cablegram from Shanghai bringing the report of a missionary just arrived from the remote inland province of Kan-Su. It told of hundreds of villages shaken to ruins, a town buried beneath a mountain, rivers dammed by landslides, thousands of victims. All this destruction had been wrought in the early morning of May 23d, but because of ruined roads the news did not reach Shanghai until July 28th.

It had taken more than two months for couriers to run the few hundred miles!

But there is a man in Washington who knew of the quake the day it occurred. Here, on the opposite side of the earth, he was able to compute its distance, fix its approximate center in the interior of Asia, and to estimate its severity with remarkable exactness.

"How?" you may ask.

I went to Washington to ask that same question, and I went to a Jesuit priest, the Reverend Francis Tondorf, of Georgetown University, whose business it is to spot earthquakes.

"I'll never forget a morning in 1923 when Father Tondorf reported a severe quake in Japan," said a Washington newspaper man. "The shocks had occurred, he said, at about 9 P. M. our time. It was then 9 A. M. next day. We had not received a word from any of the news agencies, and it seemed incredible that a big shake could occur in Japan, and the press not know it within twelve hours. "Oh, you'll hear from your agencies eventually," answered Father Tondorf good-naturedly, "for this one was a whopper."

THREE hours later, the cables began to quiver with the story of the great Japanese earthquake of September 1st, 1923. And it really was a whopper. Both Tokio and Yokohama were shaken to their foundations, one hundred and forty thousand people were killed, and more than four billion dollars' worth of property was destroyed.

"Since then," added the reporter, "I've had full confidence in every report that Father Tondorf has telephoned. He has the most sensitive instruments in America, and he watches them day and night. I've known him to get up at three A. M. to take a look at his 'detectors,' and then spend the rest of the night computing the distance and severity of the quake that he found recorded. He figures the whole thing out from a zig-zag line. The Associated Press rarely sends out an earthquake story without quoting him. Tondorf and quakes bracket together, like Mark Twain and the Mississippi, or Grenfell and Labrador."

I had no difficulty in seeing Father Tondorf. He met me in a reception-room of the university offices—a man of slight

The first earthquake detector. This earliest seismoscope was invented by Choko, a Chinese smith, in the second century. When the earth quaked the dragons dropped metal balls from their mouths into the expectant mouths of the frogs

figure, shoulders bent with the scholar's stoop, dark eyes alert behind thick-lensed glasses. His manner was quiet, deferential, kindly; but tense with the restrained eagerness and curiosity of the man of science. "Come to my laboratory," he invited, and led the way across the campus.

Georgetown University is in the northwest section of Washington, on a height overlooking the Potomac. In the distance loomed the tall towers of the navy wireless station at Arlington. "They seem to attract every thunderstorm that passes along the valley," remarked Father Tondorf, as we walked along. "I've sat at my window and watched lightning spurt around those steel towers like streamers of fire."

"Does lightning affect your quake detectors?" I asked.

"NOT at all; the instruments are sensitive only to earth movements, and thunder and lightning cause us no annoyance. I'll tell you something that does joggle our seismographs, and that is the ocean. Two winters ago was a very stormy season on the North Atlantic. Gales blew for days and kicked up mountainous waves. The beating of those heavy seas jarred the North American continent in a series of miniature quakes, and the records written by our seismographs were one long succession of jagged lines. We call these tremors 'microseisms.' Stations situated on islands may get pronounced microseisms during any severe local storm. But it takes a tremendous pounding to shake the shelf of a continent. When such slight tremors are recorded more than a hundred miles inland—as they are here—you get a suggestion both of the resonance of the earth and of the sensitivity of our instruments"

I asked, "What is the most delicate earth movement that can be detected by instruments?"

"The hundredth-thousandth part of an inch will give a very sensible record," he answered. "Such slight movements are not felt by the human body. It has been found that the vibration must move the earth particles not less than one sixteen-hundredth of an inch to be appreciable to our physical senses. The earthquake of March 1st, 1925, which was felt in New York, must, therefore, have shaken the city at least this much.

"It's a good thing for our peace of mind, perhaps, that our nerves are not more keen," added the seismologist, "for there are about nine thousand earthquakes every year, about one per hour."

"An earthquake every hour! Is that a regular performance?"

"It is the average. Sometimes there are several quakes within an hour. A big disturbance may be accompanied by a number of frequent minor quakes; more commonly the tremors follow major shocks. Sometimes we go for days without getting even a tremor; but the total for the entire year comes to about nine thousand. Most of them are trifling. There are only two or three hundred a year of any consequence.

"Some are associated with volcanoes; but volcanic quakes are local and cannot be felt by distance seismographs.

"Perhaps the greatest volcanic outburst in the past hundred years was the explosion of the volcanic island of Krakatao in the East Indies, in 1883. So completely did this eruption blow up the island, that today the sea is nearly a thousand feet deep over its former site. The blast of the explosion was heard three thousand miles away, the outburst shook the ocean into waves a hundred feet high, which inundated neighboring coasts and drowned thirty-six thousand people—and yet, as an earthquake, that disturbance was mild. It was a local affair, caused by the pressure of gases within the volcano, and was recorded only by nearby instruments. This is true of practically all volcanic quakes.

"But there is another kind of quake, more deep-seated in the earth's crust and therefore more powerful and far-reaching in its vibrations. These we call tectonic earthquakes. They are caused by fractures or slipping along seams of weakness in the crustal rocks. The break may be fifteen or twenty miles below the surface. All the big destructive earthquakes are tectonic. They shake the crust above the fracture violently, and set the whole mass of the earth to vibrating. These vibrations spread in all directions, and weaken as they (*Continued on page 189*)

COURTESY U. S. COAST GUARD & GEODETIC SURVEY

A transcontinental express train, carrying three hundred and fifty passengers, had passed through this tunnel near Three Forks, Montana, just one minute before an earthquake shook down a cliff and buried the opposite end of the tunnel under an avalanche of rock. This happened on June 27th, 1925, and is one of three major quakes that shook the United States in that year. No lives were lost

INTERESTING PEOPLE

During the past fifteen years, Tommy Luther, lumberman of the Saratoga Lake section of New York State, has planted more than six million trees. On his sixty-third birthday, he planted 70,000 between sunrise and sunset

Tommy Luther Squares His Account With Nature

IF YOU had happened to be knocking around in the Saratoga Lake section of New York at daybreak on a certain morning early last spring, you might have found yourself looking at a curious and beautiful sight. Let me try to give you a bare outline of the picture:

Across a hundred-and-twenty-foot front of abandoned farm lands, a little army of men, seventy strong, advanced in a double line. The first row stepped out briskly with uplifted mattocks flashing in the April sunlight; they paused, and the mattocks fell in two or three quick strokes. As the front line moved forward, the second one came up with a clanking of pails. The newcomers stooped over thirty-five freshly made holes, and as many tiny pine trees were dropped into the holes and their roots covered over. By the time the earth was patted down, another line of holes was ready and the planters swung forward again.

All day long, except for a brief noon recess, the little drama repeated itself with rhythmic precision.

And by nightfall, the happiest man in seven states was Tommy Luther, the beaming, rosy-cheeked leader of this tree-planting army. He had celebrated his sixty-third birthday by breaking his own record. Between sunrise and sunset, seventy thousand trees had been added to the Luther forest preserve.

Mr. Luther is the champion tree planter of America. During the past fifteen years, he has planted, purely as a private enterprise, more than six million trees, and his present program calls for ten million more in the next five or six years.

The joke of it is, Mr. Luther's business is *cutting down trees!* For thirty-five years, he has been a prominent figure in the lumber industry of his native state. He was one of the first lumbermen to realize that forests are not a species of natural deposit, like coal or copper to be "mined out" and abandoned, but a kind of gigantic crop which must be made to produce year after year.

"Fifteen years ago," he said, "the idea struck me that it was not only unpatriotic, but mighty shortsighted of a lumberman to go on stripping the forests of his country without doing anything to even up. I got the notion of actually planting trees to take the place of those I cut. In short, I decided to be a tree farmer instead of a lumberman."

At present, Mr. Luther owns seven thousand acres of land in the Saratoga Lake section besides extensive holdings around Lake Champlain and in the state of Washington. It would be hard to tell just how many thousands of dollars his holdings are worth, for they increase in value almost while you talk about them.

"Most of my land," he said, "was just wind-blown sand topped by a scattering of weeds, wild sumac, and berry bushes. The soil had been worked out. The farmers had moved away and left it, generations before. About the only signs of former habitation were a few tumbledown barns and caved-in cellars. As a matter of fact, this section wasn't farm land to start with. It was once the bottom of an old glacial lake. It had only a fairly decent layer of woods soil, and it was good only for one crop—trees. There are over eighty million acres of idle land in the United States today that ought to be growing the same crop.

"Six or seven years ago, I bought a parcel of land for less than a dollar an acre. It cost me six dollars per acre to plant it in pine, spruce, and larch. This spring I was offered fifty dollars an acre. I refused to sell. In another six or seven years, that land will be worth several hundred dollars an acre. And a few years after that, when my trees are ready to be thinned out, several thousand an acre would be cheap."

UNIVERSITY OF IOWA

In addition to his tree-farming and lumbering activities, Mr. Luther is the proprietor of the White Sulphur Springs Hotel on the shore of Lake Saratoga. Here, the tree-planting champion entertains champions in many other fields. Jack Dempsey trained in the Luther back yard for his fight with Tunney. Tommy Luther's homelike hotel was also a favorite training ground with Pancho Villa, the flyweight champion. In pleasant weather during the summer season, from fifty to five hundred persons a day dine under the trees which sweep down from Tommy Luther's forests to the very doors of his hotel.

"It was my hotel," explained Mr. Luther, "that got me into the lumber business. When I was twenty-one, I took the three hundred dollars I had saved raising vegetables and bought a lease on the White Sulphur Springs hotel. Along with the hotel, I acquired a lease on the sixty-five acres of timbered land which surrounded it. The hotel was badly in need of repairs. It occurred to me that I might cut a few of my trees and saw them into lumber to make the repairs. I did this.

"Several years later, I bought the building and the grounds out of my profits on my boarders. And from time to time I continued to thin out my trees. Before long, I built a sawmill. But I had been lumbering twenty years before it occurred to me to plant two trees every time I cut down one.

"The poet was right when he said that only God can make a tree," finished Tommy Luther quietly. "But somehow I always feel that I am lending God a helping hand when I set out a tree."

MILDRED HARRINGTON

"Pinkie's Pantry" Took the Cake

IN JANUARY, 1928, the judges of the Better Wayside Refreshment Stand Contest, conducted by Mrs. John D. Rockefeller, Jr., awarded the first prize to "Pinkie's Pantry," a tiny place situated on the road between Metuchen and Plainfield, New Jersey. Seven hundred contestants in forty-six states awaited that announcement, and certainly one of the most astonished of all of them was Pinkie. Her eyes sparkled as she read the first sentence of the judges' decision:

"The stand for which the first prize was awarded stood out from all the others, so that our choice was immediate and unanimous."

It happens that my home lies within two miles of this roadside stand, and so I know it and Norma Bamman, who has been "Pinkie" all her life because of her reddish hair and pink cheeks and fondness for frocks of rose color. To begin properly, we must go back three years to New York City and a hot dusty summer, and two weary young women, Norma and her sister Catherine, discussing the prospect of no vacation. No time could be spared from work, so Pinkie suggested: "Why not buy the cheapest car we can get and at least get out of the city on Sundays?" So the car was bought, and the two girls drove along the highways and byways during the week-ends. After several of these trips Pinkie was thoughtful.

"It does seem," she said to her sister, "as if there were hardly any nice places where you can get a meal, except the very expensive ones."

The following summer she was called to Plainfield to take charge of her mother's old home, which was in need of repairs. As she stood by the big house, she rejoiced in the beauty of the trees, the depth of the lawn, and the wonderful orchard just in back, where the fruit would soon come: apples, cherries, peaches, pears, gooseberries, and, at her feet, strawberries, almost red.

"Why," said Pinkie, "I could have a stand right here, and sell preserves made from all this fruit!"

She had no money. So she borrowed three hundred dollars and went out hunting in second-hand lumber yards. In one of them she found a discarded end of a glassed-in porch. With this in mind she designed her Pantry.

She secured lumber, the services of a carpenter, and paint. The painting she did herself, two coats of shining white. Sometimes her sister could help, week-ends. When the dainty little building was complete and the first fruit from the orchard was canned and on the shelves, it was September 25th. In two months the Pantry had to be closed. Winter had set

in. But already the place had paid for itself. And Pinkie was planning a kitchen out on the lawn, where she could cook everything in plain sight of her customers, and perhaps even prepare lunches to be served under the trees. That winter she borrowed four hundred dollars, bought an old hot-dog stand, and remodeled it, again doing the painting all herself.

"If only I could make this glass kitchen a demonstration station," said Pinkie, "I could get some equipment free."

After many visits and much persuasive argument, certain manufacturers supplied this novel glass kitchen with stove, electric refrigerator, tables and chairs, and various kitchen wares.

When spring came Pinkie began to bake. Her pies and cakes and breads sold as fast as she could bake them. Visitors often got out of their cars and inspected the spotless glass kitchen and its model equipment. Dressed in her favorite pink, Pinkie moved gayly about her wonderful kitchen and prepared them wholesome, well-cooked dishes.

By fall she had a well-organized business: There was the original Pantry, which sold her baking and preserves; the Kitchen, which supplied lunches and refreshments; a growing parcel-post department through which her patrons sent her cakes and bread all over the land, and a local demand in Plainfield that necessitated a counter at one of the high-class grocery stores of the city.

When the awarding of the prize was announced people immediately flocked to the Pantry. Pinkie had turned two rooms of her home into reception-rooms, and in them she served luncheons and teas and sold her famous foods.

"Pinkie's Pantry," said the judges of the contest that made Pinkie famous, "had great charm and picturesqueness. Its display was most temptingly arranged. Its sanitary arrangements were well handled. It was most conveniently and economically planned, and fortunately it preserved and featured a beautiful tree that many a roadstand owner would have cut down, thinking that it was in the way."

With most of which Pinkie agrees—except the part about the tree. It may be "fortunate" that it was "preserved," but she left it there because she loved it just where it is. HELEN CHRISTINE BENNETT

Nine Thousand Dollars for a Little Rodent!

THERE is probably little in the surroundings at eleven thousand feet altitude in the Chilean Andes to offer inspiration—a dreary region of no vegetation and low temperatures—but it was there that the idea came to M. F. Chapman, of Los Angeles, California, to remove to southern California, from its native habitat in the high Andes, that tiny rodent known as the chinchilla. He wanted to cultivate the species, which has been practically decimated by Indian hunters striving to satisfy the demands of furriers.

In his early forties, this pioneer in chinchilla "farming" looks back upon a life of heavy toil in lumber camps and gold mines, and of engineering projects far from civilization. Chapman's six feet of brawn, his rugged hands, square jaw, and clear eyes are testimony of the life he has led.

As a youngster on the small ranch near Grants Pass, Oregon, where he was born, much of his playtime was spent in taming rabbits and squirrels. After leaving school at fourteen, he became a lumberjack in one of the big timber camps of the Northwest. Seventeen years he spent as a "mucker" in the ore mines of the West, and rose to foreman in the Inspiration mines of Globe and Miami, Arizona. In 1918, he was sent by the Anaconda Copper Company to take charge, as mine foreman, of the Portrepillas Mine, at an elevation of eleven thousand feet in the South American Cordilleras, in the province of Atacama, Chile. Chapman had married in Arizona. With Mrs. Chapman, he moved to the new post, in a storm-swept region where the thermometer never tops sixty degrees, and where it remains for months at twenty below zero.

Before coming to this bleak country, Chapman had never heard of chinchillas, and his first information was picked up from Indian laborers at the mine, and from occasional hunters who tarried at his camp.

A year after his arrival in the Andes, Chapman secured a pair of chinchillas paying an Indian two hundred dollars for them. He built them a small pen, and began a study of their habits. He sought additional members for the colony, and near the end of his fifth year he had secured an even dozen of the little animals.

M. F. Chapman bought a pair of chinchillas from an Indian hunter in the Chilean Andes, and now he has a chinchilla farm in southern California. He is said to be the first man able successfully to remove the delicate animals from their mountains

In carrying on his study of the chinchilla, Chapman learned that no one had ever succeeded commercially in removing the rodent from the high altitudes. The little creatures in all instances had perished on reaching the lower areas.

Leaving the mine in 1922, Chapman and his wife transported their small charges to another location at a nine-thousand-foot altitude, in the vicinity of Iquique, Chile, where they made a year's stop, and gave careful attention to the care of the chinchillas. Only one of the rodents died, and this was attributable to old age.

The steamer voyage to California presented greater difficulties. Chapman says the memories of that trip through the tropics is a nightmare, for, having overcome the first trials of taking his chinchillas down from their lofty homeland by slow stages, he had to keep ice in the small pen and wet sacks as a covering, to prevent the rodents from being overcome by heat. When one of the small beasties would stretch out on its back, panting, cold applications were ready at once to restore it.

Under a special permit from the United States Biological Survey, the small colony was landed. Now, every day he receives letters from biologists, naturalists, zoölogists, and other scientists all over the world, asking about the care and habits of this rare little beast, a coat of whose pelts is worth a king's ransom. It takes over a hundred skins to make a coat, and Chapman's chinchillas still number fewer than a hundred. But the owner is not planning to convert them into a coat.

"I'll never kill one," Chapman says, "and those pelts you see there are from the one I lost in South America and a couple that have since died of pneumonia."

If you do not see the practical sense of this venture from the dollars and cents point of view, just listen to this:

"Since I've been here in Lennox, I've sold three pairs for breeding stock," Chapman said. "The first two pairs I let go for six thousand dollars and the last pair for ten thousand. The price of males is now up to nine thousand dollars apiece, and females five thousand dollars."

Considering this, and the fact that in captivity the little animals reproduce three times a year, with an average of two to a litter, as against one litter in their native state, the prospects for Mr. Chapman's farm and for the future of his project are propitious. RUPERT MURRAY

She Knows What the Well-Dressed Women of All Ages Have Worn

MRS. MINNA SCHMIDT, of Chicago, is costumer, historian, and lawyer. Her unique "Hall of Fame" consists of hundreds of minute figures of famous characters clad in authentic garments of their periods. Into each costume of these sixteen-inch figurines, valued at from two hundred dollars to one thousand dollars apiece, has gone not only hours of fine sewing but years of patient research.

The costumes represent the changing styles of feminine apparel down through the ages, from the animal skins worn by cave women to the filmy twentieth-century creations of fashionable French designers.

In one group are women made famous by the Bible: Eve, Jephtha's daughter, Lot's wife, Mary, Martha, Ruth, and Naomi. Standing side by side are those two unfortunates: Anne Boleyn and Mary Queen of Scots.

Close to Josephine Bonaparte is Madame de Récamier, that friend of Madame de Staël who was banished from Paris by Josephine's husband, Napoleon. And next in line is the matronly form of the good Queen Victoria, arrayed in her magnificent coronation robes.

Besides models of royalty, there are figures clad in Egyptian costumes of the days of Cleopatra and Alexander the Great. No less interesting are the products of a younger civilization, dressed in the classic robes decreed by Grecian fashion dictators. Rome, too, is represented by diminutive Latin ladies clothed in the identical styles in which they climbed the slopes of the Quirinal, or paced the arched porticoes near the Palace of Caligula.

At the very end of the line stands the sturdy figure of Gertrude Ederle, first woman to swim the English Channel.

Mrs. Schmidt's desire for accurate knowledge has sent her on innumerable trips to distant lands, and has led her to delve into thousands of books in search of additional information on the subjects of dresses, coiffures, fans, and jewelry of historical periods.

During all these years of study, she has made many contributions to history and to the art of costuming. Among the exhibits of the Chicago Historical Society is a five-thousand-dollar collection of wax figures, which was presented to that institution by Mrs. Schmidt in commemoration of her thirtieth anniversary as a designer and costumer. The group is made up of wax miniatures of noted Chicago women, whose gowns portray the vagaries of fashion as far back as 1803.

Mrs. Schmidt stepped from a steerage cabin on a German liner into a three-dollar-a-week job with a Chicago family. Eventually, the ambitious young woman opened a little studio for instruction in physical training, dancing, and dramatic art.

Mrs. Minna Schmidt, of Chicago, Illinois, is an authority on costumes of every period, and has dressed a collection of dolls representing famous people. (Left) A 16-inch figure of Martha Washington, and (right) a model of Faust

She had vigor, enthusiasm, and determination. When her young charges wanted to give plays and recitals, she couldn't afford to buy their costumes, so she determined to make costumes for the young student actors that would inspire them to live their parts.

Her knowledge of costume-making was scant. But she set to work to develop the inventive ability she had displayed when, as a girl, she had dressed her family of dolls. Soon the floor of the crowded workroom was strewn with a tangle of threads and bright-colored scraps, as the students' costumes began to take form.

It was great fun, this fashioning of costumes for her little pupils, and they were very pretty costumes indeed. But they didn't quite satisfy Mrs. Schmidt. She is accurate and painstaking, and questions soon began to bother her. Were her costumes authentic, or could glaring anachronisms be detected by the more knowing members of her audiences? What kinds of fans and slippers were popular in the eighteenth century, and what sort of jewelry did Cleopatra wear? These and thousands of other costume problems kept cropping up and puzzling the designer. She wanted her costumes to be exactly right, as well for her own satisfaction as for the education of her charges. She couldn't, conscientiously, teach them false ideas of costuming.

She saw how necessary was a working knowledge of the fashions of the past. The classics attracted her interest, and she found that history books and the Bible had much to offer on the subject of feminine apparel. Constant reading and research added to the style parade of the centuries. Her thorough methods made her an authority in her business. She has also won fame as a lecturer and scholar, and has added to all this the distinction of having taken her law degree at the age of fifty-four.

It is her proud boast that she and her husband have been business partners for forty years. Helmut, their son, is the sculptor who models the wax figures. Edwin, another son, has a taste for music and dramatics, and is an outstanding authority on Shakespearean characters. He is a consultant on Shakespeare and minstrelsy. Miss Emily Lundgren, who has been connected with the school for twenty years, is an authority on headgear, and she is responsible for the wigs of the images.

"Never have women been dressed so sensibly and so hygienically as to-day," says Mrs. Schmidt.

"Whereas two years of hard work went into the making of one gown for Queen Elizabeth, an attractive dress can be made to-day in a few hours by any clever woman."

Captain Bruder Has Made 5,000 Trips on the Hudson

SIX feet six in his stocking feet, with clear blue eyes and a fine ruddy skin, that is the Captain Bruder that everyone knows. He has charge of the flagship of the Hudson River Night Line, which runs between New York and Albany. During his half-century on the Hudson he has made over five thousand trips up the river, and not once, in all those years, has he failed to appear because of illness.

Bluff, good-natured, and hearty, the captain goes about his work, not in the least weighted down by his sixty-eight years. His voice is as strong and deep as ever and when he speaks it rumbles like thunder from his great chest.

On his numerous trips up and down the Hudson the captain has met many celebrities. Presidents, senators, congressmen, and other officials nearly always take the trip from New York to the State Capital at some time during their terms. Then there are writers, prize fighters—interesting people in every walk of life with whom the captain comes in contact.

Talking of the changes he has noticed on the river, the captain said: "Even in the early days the boats were crowded. Everyone wanted to go to Saratoga, and the boat brought them six miles nearer than any other means of transportation. They could bring their horses and carriages with them on the boat. I remember when their race carts used to be piled high on the hurricane deck.

"The boats were not so comfortable then. The passengers had to eat below deck, where the glory hole now is, and take turns at table. Each guest was allowed twenty minutes to fill up, at fifty cents a fill. The dining-room was dimly lit by kerosene lamps swung over the tables. In those days the passengers didn't insist so much on comfort as now. Many of them would sit up all night, if they couldn't get a berth.

"The help has changed some too. At one time every steamboater was a Yankee and came from up-state, while to-day there are many foreign-born employed on the line.

"The boats were smaller; they held about a hundred, to the thousand or more carried at the present time, and they were easier to handle. The river was less congested then, there were fewer tugs, ferries, and tows to avoid."

Captain Bruder was born on a farm near Schodack Landing, twelve miles south of Albany. He now lives but a short distance from his birthplace with his wife, parrot, and dog, on a fruit farm of ninety-five acres.

The Hudson River was the only large body of water near his home when he was a boy. It stirred his imagination, and when his teacher in the grade school bought a barge, and offered the husky youngster a job working on it, he accepted with alacrity.

For seven years he was a deckhand on the barge "Baldwin." The next three years he worked on the "Ulster County," and then for one year on the "Ontario," rising to be a sailor, second, and first mate.

C. M. PHOTO CO., N. Y.

Captain Charles Bruder, 68-year-old river captain, has missed but one day from his run in fifty years. In the summer season he commands a boat running between New York and Albany, on the Hudson River

All this time he was learning about ships.

The captain married when he was twenty-four. His salary at the time was twenty dollars a month, but gradually he worked up to fifty a month. And then he saw that he had reached his limit of advancement on barges.

There was an opening for him on a passenger boat, with a chance for advancement, but the salary was fifteen dollars a month less than he was earning on the barge. Changing was a hard step for the captain to take, but change he did. He became wheelman, then pilot, and finally skipper.

One night an engineer, Carl Carlson, came running and told him there was a fire in the hold. The captain did not lose his head for a single second. He called his officers, and ordered every man to the place assigned him in the fire drill. He decided not to beach his ship, but to run her to the nearest dock. If he beached her, the small boats would have to be launched, and this causes terror among passengers. Some of them might become frightened and jump into the river.

Then he made his way to the saloon where the passengers were, and begged them to keep cool and trust to him to get them out of danger.

The skipper rushed back to the bridge, and his wooden ship, without watertight compartments, and two miles from a landing, was held on her course. She steamed up the river, with smoke and flames pouring from her hold.

It was a close shave. Captain Bruder was the last to leave his ship. With some of his crew, he had to scramble over the side because the decks were too hot and stifling for passage. The ship burned to the water's edge, with every ounce of her cargo. But not a single life was lost.

The service of Captain Bruder on the river dates from 1876, or fifty-one years. In all that time, he says, he has missed but one trip. He was on the steamboat "Rensselaer" of the same line when she was making her final trip. He was due to take another boat back to Albany that evening. The "Rensselaer" cracked a walking-beam, and Bruder was assigned to steer her to the shops. Thus, he relates regretfully, he came to lose one trip in half a century.

For more than ten years he has made seven trips a week, without a layoff. But he doesn't mind that, as his is a job with three and a half months' work each summer and then eight and a half months' vacation.

During his vacation the captain turns into a farmer. He has fifteen hundred fruit trees, apples and pears. He employs an all-year-'round hired man to work on the farm.

He does not smoke, drink, or chew. He enjoys reading, and his home is filled with books. He likes stories of adventure, especially those by Jack London.

The captain went to Bermuda once, and that is the extent of his roaming. He prefers the Hudson to the ocean.

"On the Hudson we watch the towns grow, and the woods disappear. Trip by trip, our searchlight seeks out those interesting details along our route. Then we have dozens of friends along the banks who wait for the friendly little toot of our whistle. It is not lonesome, as deep-water sailing must be."

Is soup a course or a meal?

Vegetable soup is so hearty that it can be either !

PERHAPS you will get a new idea about soup when we tell you that thousands and thousands of women consider Campbell's Vegetable Soup "a meal in itself". It contains so much real food that they frequently make it their luncheon or supper.

Soup is the ideal introduction to a meal because it has such a tonic and stimulating effect on the appetite and digestion. But the widespread use of Campbell's Vegetable Soup as the principal dish proves that housewives depend on soup as useful for every kind of meal.

Order Campbell's Vegetable Soup from your grocer. Notice how often it tempts your appetite. See how "handy" it is to have in your pantry, always ready to provide a nourishing course or a satisfying principal dish. You will make up your mind never to be without such an all-round stand-by.

Fifteen of the finest vegetables that grow are blended in Campbell's Vegetable Soup, with invigorating broth, choice cereals, flavor-giving herbs and seasonings. In all, thirty-two different ingredients, selected, blended and cooked by Campbell's famous French chefs. All ready for your table, after you have added an equal quantity of water, brought to a boil and simmered for a few minutes.

Science is advising us to include more vegetables in our diet, for mineral salts and other essentials. Campbell's Vegetable Soup supplies these abundantly for you and your children.

Every known, popular kind of soup in the world. Each soup the masterpiece of its kind. This is the daily service Campbell's offer to your family table. Delicious quality. Endless variety. Welcome convenience. On this page see the full list of Campbell's Soups. (Also printed on the label.)

Your grocer has, or will get for you, any Campbell's Soups you select. 12 cents a can.

THE CONQUEST OF PAIN

"We'll have to operate right away," the doctor had said. And already they are wheeling the patient into the operating room. He can feel his heart beating a little faster. He is tense. . . . What are they going to do? . . . Then a soothing, gentle voice: "Just relax and breathe easily."

Oh, yes! They are going to give him ether! . . . Instinctively he obeys. . . . Nothing much seems to be happening. . . . A general feeling of lightness comes over him . . . and drowsiness . . . sleep. . . .

* * *

He is in bed, now . . . his eyes open . . . he is coming out of the ether. . . . "Everything is all right!" . . . Only convalescence ahead now. . . . How marvelous!

How marvelous, indeed, this accomplishment of American medical science, this conquest of pain which has robbed the operating room of its terror—of the mental anguish and physical torture which once accompanied the surgeon's art.

Yet it was only in the early eighteen-forties that Dr. Crawford W. Long in Georgia and Dr. W. T. G. Morton in Massachusetts first demonstrated that the pain of surgical operation could be relieved by the use of ether.

For some years after its discovery the use of ether remained in the experimental stage. Its purity and effectiveness, its safety in general use, were very questionable. Dr. E. R. Squibb, founder of the Squibb Laboratories, determined to develop a process for manufacturing pure ether for anæsthesia which would make its use safe in general practice.

After many discouragements, after patient and persevering experiments, he perfected this process. That was almost three-quarters of a century ago. Since then, Squibb's Ether has been used by surgeons in *millions* of cases for the safety and comfort of their patients.

In addition to Squibb's Ether, E. R. Squibb & Sons have been manufacturing many of the important products used exclusively by the medical profession, such as the antitoxins for diphtheria, erysipelas, scarlet fever and tetanus; the serums and vaccines; also insulin, etc. E. R. Squibb & Sons also prepare many medicinal household products such as milk of magnesia, cod-liver oil, castor oil, bicarbonate of soda, dental cream, liquid petrolatum (mineral oil), etc.

The "Priceless Ingredient" of Every Product is the Honor and Integrity of Its Maker.

Stardust

(*Continued from page 56*)

little costume and write a prologue, and Betty is to speak it."

"Why wish that job on Betty?"

"Well, if you've ever seen her in a bathing suit— Then, Violet is to direct the play and finance it, and write in some improvements and design costumes and scenery and manage the publicity and act the star part."

"What's the play about?" Lon asked.

"I haven't the faintest idea, and I bet the author hasn't, either. It's a debate about the nature of reality. The real is unreal, and the unreal, real; and everything symbolizes something else, and a lot of problems are all unsettled. 'Most everybody is royalty, and Violet is the queen."

"What are you going to be, dear?"

"I might take a small part—something suitable for a half-pint lady. But I wouldn't promise until I had talked it over with you."

Alonzo Theophilus Berwick gave the matter his sober judgment.

"Well, I can't see any harm in it. You're in with the best people, and Violet stands high in Branford, and her father is a director of my bank."

Joan laughed.

"Violet has a great hate on sordid commercialism; but I notice she uses her dad's assets for all they are worth."

SETH RAY noticed that too, and said as much when Violet asked him to underwrite the forthcoming production, which was to be given on an off-night at the Shadowland Theatre.

"They tell me Branford won't pay more than fifty cents to see a play," she told her father. "We can't possibly make expenses the first time. I'd like to agree to make up the deficit."

Seth seemed reluctant about being a patron of the drama.

"It won't cost you nearly as much as dabbling in politics, and it's much more worth-while."

The reference was to a painful event—Mr. Ray's attempt to be mayor of Branford. He had sadly overestimated the voters' craving for his services. The tragedy had cost him several thousand dollars at the time, and a good deal in family blackmail since. Thus, Mr. Ray became the keeper of the deficit against his better judgment, and a most unwilling "butter and egg man" to Violet's show.

At Lake Runkokomo Violet had run things with a high hand; but she had not long been in circulation in the larger democracy of Branford before she became aware of something the population wanted. The queer suggestion came to her again and again, until the idea began to wear a hole in her consciousness. Why not make this harmless compromise with public opinion? In the final analysis, she told herself, the success of this great esthetic movement depended upon the number of people who would come to Mamie Callander's window at the Shadowland and poke in fifty cents.

So, upon a bright September afternoon she swooped down upon Emory Gault. That cut-up had just extracted a quarter from the ear of an astonished boy customer called "Scoots" Sipperly, and was abashed by her sudden appearance.

"Mr. Gault," she said, "have you ever thought of going on the stage?"

Scoots Sipperly abandoned the remnants of his raspberry soda and ran like a scared rabbit. He had been caught once by a lady who was getting up an entertainment; but he was wiser now, and faster on his feet.

"Why, yes," said Emory. "In fact, I've been wanting to talk to you about my plan for a vaudeville team."

"Oh, slap-stick comedy!" exclaimed Violet reproachfully. "I mean, one must aim no end higher than that, mustn't one?" She made Emory feel like a fish worm; that was another of her great gifts.

MISS RAY now opened his eyes to more civilized forms of self-expression. A number of people had spoken to her about him, and she knew he had talent. Now, the Strut and Fret Club was about to stage this terribly intriguing play "Stardust," and she had a part for him. It was a minor rôle; but one couldn't begin by playing Hamlet, could one? Emory said no, one couldn't.

"Your part is that of a servitor. I hope you don't mind."

"A which?"

"A kind of lackey, or butler. You serve food and wine, and so on."

"Well, I ought to be good at that. Have I anything to say?"

"Your lines"—Violet put the matter tactfully—"will not be difficult. Of course, in time you will work up to more important rôles. I am merely offering you a start; if you have dramatic ability you will go far."

Emory accepted this opportunity to take the first step toward the Great White Way, and agreed to come to the studio tomorrow night as soon as he could get off.

"She and I are going to play together in 'Stardust'," he told George Steemeyer after Violet's departure.

"On the level?" asked the drug clerk.

"Positutely. She's the star, and I'm the dust."

"No kidding—what are you going to be?"

"Waiter and bartender."

"Well, I'll bet you'll be a scream!"

At that moment there was born a delusion that was to have far-reaching effects.

Violet explained the soda-water man to the other strutters and fretters before his arrival at the studio: Emory was no end popular with the unthinking masses. He would lure them, and we would catch them with our message of beauty. In other words, he was to be used as bait.

"He's a menial—a man-servant. A touch of burlesque there is good theatre. I mean, it emphasizes the dignified characters. Of course, Shakespeare knew that trick."

At nine Emory left soda-jerking to George, and took up the drama in a serious way. He hastened to the barn of all the arts in his comic flivver, "The Spirit of St. Vitus," and was greeted earnestly by his hostess. As for the other members of the troupe, the best that could be said was that nobody bit him.

In the society in which he habitually moved, Emory was the life of the party, full of quip and jest, and always ready to burst into what he believed to be song. He could do amusing tricks with cards and matches, and when he put on a girl's hat he was practically irresistible. But tonight he felt like the common people in a cartoon. His sorry little japery about barn-stormers brought him nothing but stony glances.

"If I hadn't given my word," he told George Steemeyer the next day, "I'd have took my foot in my hand and run. Scoots Sipperly had the right idea."

This was no place for mirth and laughter. Life was real, life was earnest, and Violet was its prophetess. She was dressed in what the ignorant soda clerk thought was a window curtain. She sat on a second-hand throne she had picked up cheap, and put on her horn-rimmed glasses, and read the entire manuscript of "Stardust."

This she did partly for Emory's sake, but more for that of Doctor Clymer, the painless dentist, who had been appointed king. The part had originally been offered to Sim Coburn, real estate and loans, but Mrs. Sim wouldn't let him be Violet's king, so the rôle fell to Doctor Clymer, who had no wife to guide him.

As if the play were not obscure enough already, Violet exploded little bombs of truth and beauty, and made it even harder. She painted masterpieces in the air with her thumb, and explained how the author's civilized symbolism was to be expressed in the costumes and sets—bold straight lines for this and cubes for that, and here and there a terribly significant triangle and an angry red rhomboid. For every little color, too, had a meaning of its own; she knew things about color that would have been news to Michael Angelo.

AS NONE of these things had ever existed, Violet had to design everything—the draperies, the furniture, the geometrical costumes of the actors, the very patterns in which they would stand.

"A designing woman, if you ask me," Emory told the drug clerk. "I'd say this play has about as much nourishment as one of my cucumber sandwiches; but they were all sitting around and eating it up. Even Doc Clymer tried to make out he knew what was going on—the old crook! They all looked soulful and said it was no end intriguing."

"How are you going to be dressed?" asked George.

"I'll appear in a lovely dark brown parallelogram. That's what the well-dressed bartenders are wearing this season."

"Well, I bet you'll be a riot." When an idea once got lodged in poor George's head it was there for good.

Emory now left the deluded druggist

and went to lunch, traveling in his private and personal car, "The Checko-Slowupia." Later, he soaped upon his windshield the words, "The Self-Express Company." He kept this title to the bitter end, but toward the last the rear curtain of his chariot bore the words, "Excuse my stardust." Violet solemnly thanked him for his conscientious work in advertising the play.

"I'm the free street parade," said Emory.

As the play slowly ripened upon its vine, like a pumpkin, Violet wrote many pieces for the "News-Sentinel," and Lafe Barrett, the editor, always eager for free reading matter, printed them all.

"Stardust," it seemed, was a searching inquiry into the nature of the soul. Violet explained the relation of plane and solid geometry to human psychology, and showed how terribly significant color was, and made everything as clear as mud. Joe Spengler, the barber, got the idea that this was a mystery play, and he was going to see it to find out who committed the murder.

In women's reading club circles and among the families and friends of the actors it was understood that "Stardust" was a play for the few, a treat for the mind, and very, very artistic.

HOW different it was among the unthinking masses! Emory's jocose old car and the verbal indiscretions of George Steemeyer had poisoned the public mind, if it has one. On Main Street, from the Farmers' Loan and Trust Company clear out to the Epicurean Café, it was believed that this would be a hilarious show. Emory was going to be a waiter. He would probably drop the dishes and throw custard pie.

On the day before the dramatic revolution, Violet Ray was seen hurrying down Main Street with a glitter in her eye and a yellow paper in her hand. It was so she erupted into the office of the "News-Sentinel."

"Carrington Hepplewhite!" she cried. Lafe Barrett was so startled by this explosion that he spilled hot sparks on himself from his corncob pipe. "The famous New York producer. He's coming to see the play!" She offered the telegram in evidence. "You must let me write an item about that."

"Sure, all right," answered Lafe.

"Just think! I've got him to come all this way to see our production. I'll venture he never heard of Branford before."

"Well, Branford never heard of *him*, so that makes it fifty-fifty. I'll get you some copy paper."

It is doubtful whether the news about the coming of Hepplewhite inflamed the minds of the populace, but it had other devastating effects. Not only did it cause Lafe Barrett to burn holes in a perfectly good pair of pants, but it made the members of the cast even more nervous than they were before. Also, it reduced Seth Ray's spirits to a new low level.

Violet had chattered incessantly about this Carrington Hepplewhite, who was not, it seemed, the ordinary type of producer, thinking only of the box office, but a rare soul sensitive to beauty. He was not merely of the intelligentsia, he was of the cognoscenti. Father understood that to mean something extra fancy, A-1, superrefined, and he hated that kind of man no end. Now this precious nuisance was coming to be their guest during the ordeal. It was the worst calamity that had happened to him since he ran for mayor.

As the zero hour approached, Emory Gault, too, was low in his mind. He bandied quips and sallies with his customers; but he was not himself, and when he tried to do his famous juggling act for two clerks from the Beehive store, he fumbled and broke the glass. The girls giggled, and the blond one said he ought to save all that stuff for to-night's show.

"They smile at me now, George," said Emory, "but to-morrow I won't have a friend in the world."

"You think they'll all die laughing, do you? You sure hate yourself."

On his way home to supper on that last night, Emory's car broke down on Main Street near the Shadowland Theatre. Examination showed that the entire west end of the car was a mass of ruins; it would cost much more to repair than the antique was worth. To Emory it was an omen that his career in Branford was at an end; it was more of that symbolism that V. R. was always talking about.

He left the ruins by the curb, and in the morning (if he lived) he would get the junk man to tow it away. The faithful old boat had cracked its last joke—no, not quite its last, for Emory left upon it a cardboard sign hastily penciled with the immortal words: "I do not choose to run in 1928."

Through the evening the jocular old bus, known to all, stood there as if urging the people to come to "Stardust" and watch Emory Gault cut up.

IN THE larger theatrical centers people go to plays because they want to, and stay away from them for the same sound reason; but in Branford motives were far more complex. Some went to "Stardust" because there had not been a flesh-and-blood play in town for quite a while; others because they had friends in the cast; some went in quest of culture, others in search of giggles; still others because ordered by their wives.

As Dgaszbann's foggy masterpiece went on its devastating way, all these diverse elements were united by ties of common calamity, as people are in times of earthquake, hurricane, and flood.

Betty Gates, the prologuer, was good scenery, but weak in the voice. Everybody was puzzled by the impressionistic streaks of scenery, by the incredible furniture, by the actors dressed in geometry, and, most of all, by the talk.

Queen Violet was the center of all discussion, and when the other characters were not arguing about the nature of reality, Her Majesty was staging a little debate between the upper and lower levels of her nature—both of which spoke in explosions. The king was allowed to talk a little, but he was a very limited monarch. Doctor Clymer may have been a painless dentist, but he was far from being a painless actor. Everybody was glad when the red light was flashed on Doc.

From the beginning, Emory Gault had been a sore disappointment to his public. True, he looked ridiculous with nothing on but a parallelogram, but there were only polite titters. He had little to say, and he cracked no jokes or dishes. When the curtain went down on the first act there was faint and cultured applause.

Joe Spengler, the barber, was among the handclappers, but he later explained that he was applauding the good old Shadowland curtain, a scene on the Grand Canal of Venice. At the end of the second act the bamboozled barber took his hat and went home—a deed he was later to regret. Joe had come to this show to find out who committed the murder. Nobody had been murdered at all, though many, he felt, should have been.

AS THE curtain arose upon the third and last act a general air of uplift, boredom, and resignation prevailed. A trained observer would have guessed that Carrington Hepplewhite, though a cognoscente, was suffering keenly, that his host, Mr. Ray, would not live through the show, that Scoots Sipperly was wistful about what he might have done with that fifty cents at Kretcher's Kandy Kitchen. Probably the only happy soul in the audience was that of Jake Cummings, the grain elevator man. There was a look of ineffable peace upon his uncivilized face, and his wife did not have the heart to wake him.

Jake was aroused, not by Mrs. Cummings but by an unfamiliar sound. For an unbidden guest had sneaked into the Shadowland Theatre—the Comic Spirit. Laughter had come back to the sad old world.

It started with a verbal misstep by the drug-store cowboy. Up to this point Emory had made no contribution to the general befuddlement. As a menial, his job was not to discuss metaphysics but to pass the refreshments. It was in the third act, however, that he had his longest speech to make. Accordingly, he took his place upstage beside the portal, took a full breath, and cried in a loud, clear voice:

"The king has entered the galace pates!"

A burst of laughter followed this news. After all this solemnity, the audience would have laughed at an even poorer joke than that. Emory made the mistake of trying to correct his error.

"The ging," he announced, "has entered the calace pates—I mean—"

Nobody heard what he meant, in the ensuing riot, but His Majesty's entrance stilled the uproar for a moment—and only for a moment. For the dreams of Emory's wistful years had suddenly come true. He found himself upon a stage evoking boisterous laughter. Across the footlights he saw the happy, open faces of satisfied customers. He now departed from the great Dgaszbann's limpid lines, and self-expressed himself as follows:

"Doc Clymer's here!"

The audience reeled with mirth, the cast broke down in hysterics. There was only one straight face in the theatre, but that was the straightest face in all the world. If there was anything needed to complete the general welfare it was the stern and rockbound countenance of Her Majesty as she ordered the servitor to bring refreshment for her returned king.

Violet might better have sent for the police, for when Emory came back with his charger he was wearing Betty Gates's lovely pink hat on his menial head. As he gave sustenance to his famished monarch, he fumbled the glass and picked it out of the air in the vicinity of his bare knees. A blond clerk from the Beehive shrieked at this point, and was suppressed by her scandalized mother.

Keep Your Money

Till you're convinced. Why we offer a free 10-day test of this amazing shaving cream, to prove our case. You risk nothing

Gentlemen: When we first told you of the remarkable delights of Palmolive Shaving Cream, we advanced our claims modestly, leaving it to the product itself to "sell" you.

We told you "Don't buy—yet." We asked you first to let us prove our case at our expense.

To the hundreds of thousands of men who mailed the coupon in, we sent a 10-day test of the shaving cream as its own best ad.

For you cannot shave with beautiful advertising, and no ad can succeed unless the product is outstandingly *right* itself.

Once won, men have boosted it

Eighty-five per cent of men, we find, who once give Palmolive Shaving Cream a trial, become wedded to it. And these boosters have spread our fame in every city and town. Today we make the fastest selling shaving cream in the world.

When we decided to create a new shaving product we first found out just where other preparations were lacking. 1,000 men told us their wishes, and we set out to fill them.

When, after 129 failures, we found our present formula, we exceeded the four things they asked, by adding a fifth. Our vast laboratories, skilled for 60 years in soap making, developed a shaving cream that men tell us is truly remarkable in its action and effect.

These 5 unique features

1. Multiplies itself in lather 250 times.
2. Softens the beard in one minute.
3. Maintains its creamy fullness for 10 minutes on the face.
4. Strong bubbles hold the hairs erect for cutting.
5. Fine after-effects due to palm and olive oil content.

Now mail the coupon

We take the risk—not you. We undertake to please you . . . to win you in ten shaves. Give us the opportunity to prove our case. The coupon is for your convenience—to prevent your forgetting. Won't you use it, please?

THE PALMOLIVE-PEET COMPANY, CHICAGO, ILL.

To add the final touch to shaving luxury, we have created Palmolive After Shaving Talc — especially for men. Doesn't show. Leaves the skin smooth and fresh, and gives that well-groomed look. Try the sample we are sending free with the tube of Shaving Cream. There are new delights here for every man. Please let us prove them to you.

10 SHAVES FREE

and a can of Palmolive After Shaving Talc

Simply insert your name and address and mail to Dept. B-1486, Palmolive, 3702 Iron St., Chicago, Ill.

Residents of Wisconsin should address Palmolive, Milwaukee, Wis.

For five horrible minutes Violet tried to get this play back upon its track. But the actors were weak with mirth, and Emory was going around trying to administer restoratives from his tray. The company, in open rebellion at last against the brow-beater, aided and abetted Emory in his clownish pranks. The long drought was broken; Emory was himself again.

At last Violet did what she should have done as soon as the audience began to enjoy itself—she ordered the curtain down. As the Grand Canal descended upon the disgraceful scene she waved the Strut and Fret Club back out of harm's way. But Emory had yet one more jest left in his system—the most venerable of vaudeville gags. He let the curtain fall almost upon his head, then, as destruction seemed certain, he lunged forward and fell sprawling before the Grand Canal in a heap of tin and broken glassware. At this point, Seth Ray gave up the struggle and fell upon Maw's shoulder in a burst of happy tears.

THE eminent New York producer said afterward that here was where Emory Gault showed that he was born for the stage. The mountebank picked himself out of the rubbish, bowed his acknowledgment of the tumultuous applause, lifting Betty Gates's pink bonnet, then held up his hand for silence, and said:

"On behalf of the company I thank you for your appreciation of our efforts to entertain you. Miss Ray asks me to announce that Mr. Carrington Hepplewhite, the noted New York producer, is in the audience and has consented to speak to you." He waited respectfully while that great man climbed the steps. "Mr. Hepplewhite," announced Emory, and retired gracefully into the wings.

On his way to the stage, Mr. Hepplewhite, who was used to thinking fast in times of peril, evolved a brilliant plan. When the perfunctory applause was over, he complimented Miss Ray highly upon the diverting satire she had created. She had fooled us all with her straight-faced absurdities, then put over the funniest ending he had ever seen on any stage.

He jiggled a graceful finger toward the wings, and waited nervously. After an agonizing moment of doubt, Violet appeared, smiled her pleasure at the public applause, but did not trust herself to words. The rest of the company was now dragged out before the Grand Canal, Doc Clymer being especially well received; but still the hall resounded with shouts of "Emory! Emory!"

Once more the people's darling appeared before his public. The great producer touched him lightly on the shoulder.

"I predict for this young man a brilliant future as a comedian. Perhaps I may be able to help him a little on his way."

Emory deftly removed a fifty-cent piece from the cognoscente's ear and advanced to the footlights.

"Here's your fifty cents, Scoots," he said. "After this, be more careful when there are city slickers in town."

So the last memory the delighted Branfordians had of this production was of the suffering back and flaming red ears of Scoots Sipperly. As the audience flowed out the rejuvenated Seth Ray shook hands happily with friends and neighbors.

THE next day the town was electrified to hear that Emory Gault had resigned his position with the Red Cross Pharmacy and was going East with the great Hepplewhite. A great crowd of well-wishers gathered at the six-twenty that evening to bid him good-by and good luck. In the last glimpse Branford had of him in the September twilight, he was stealing the conductor's big silver watch.

A stream of post cards fell upon Emory Gault's friends for a while, then it faded to a trickle, and finally ceased. Months passed and there was no word from Branford's favorite son.

It was Milt Boyer, buyer for the Beehive, who solved the mystery, Milt who visited the metropolis twice a year and dallied nightly with the drama. The New York theatre-going world had taken Emory to its bosom. Milt had seen him in the very heart of the Great White Way, the idol of the pleasure-loving public.

It is true that the great Hepplewhite had turned out to be exceedingly small potatoes upon that street called Broadway. It is true that the stage had not taken kindly to Emory's moss-covered wheezes. But his other great talent had met with instant recognition. Milt found him performing with skill, speed, and humor at a glittering marble soda fountain twenty feet long!

These Swift Couriers Are Always Homeward Bound

(*Continued from page 33*)

all his time teaching young pigeons to fly.

Teaching pigeons to fly! "That sounds like teaching fishes to swim," I said, when I met Mr. Ross in his office at the army post—a big raftered room with white-washed walls embellished with portraits of famous birds.

"Maybe it does sound fishy," the pigeon expert answered in his soft Scotch burr, "but training is a very important factor in developing speed and distance. Of course we are careful in our selection of the material to be trained. That is fundamental. We want good birds to work with. But if even a well-bred homer were left to his own devices, permitted to develop haphazardly, he would turn out only a scrub in performance.

"Careful selection and expert training have worked wonders, even in ten years. Before the war we would hesitate to fly a youngster, by which I mean a pigeon less than a year old, two hundred miles. Even today the Europeans would not think of racing a youngster two hundred miles. But we think nothing of flying them three hundred and four hundred miles, and some youngsters have raced five hundred.

"Ten years ago a speed of one thousand six hundred yards a minute was regarded as very exceptional, but to-day flights of a mile (one thousand seven hundred and sixty yards) a minute are common. Recently an American pigeon flew three hundred miles at the rate of two thousand one hundred yards a minute, which is better than seventy-one miles an hour."

"How does this speed compare with that of other birds?"

"Some of the migratory birds are said to fly faster. I've heard that a pintail duck has made one hundred and twenty-five miles an hour, and that golden plovers, in their long flights across the North Pacific Ocean, do around one hundred miles an hour. But these figures are estimates. The homing pigeon is the fastest flyer whose speed has been precisely clocked. Of course the limiting factor in all our work is the God-given quality which is the pigeon's nature—his homing instinct."

"THAT'S what I want you to explain," I said. "What is this quality that makes a pigeon go home, and how do you train it into him?"

"What it is, we don't know," answered Mr. Ross slowly. "Nobody can explain it. All we know is that certain birds have it, and others do not. If a bird does not have it in his blood, no amount of training will put it there. But in the birds that are homers, the instinct is so ingrained that it is the ruling passion of their lives, so much so that we can depend on it in an emergency, as the Lost Battalion found that they could depend on Cher Ami; and we rest assured that as long as the pigeon is able to fly at all he will fly homeward.

"Many species of birds have an unfoolable sense of direction, and regularly fly long distances on their seasonal migrations to nesting places and feeding grounds. Golden plovers will fly from Alaska to Hawaii, or from Nova Scotia to Patagonia, and back again, year after year. But, as far as I know, nobody has been able to tame a golden plover and train him to fly to his master's home.

"There are several kinds of pigeons, but only this one variety—the so-called carrier or homing pigeon—will turn immediately and directly home when released. And this holds for enormous distances. A Pittsburgh pigeon was taken to Denver and liberated. Unerringly, he flew home to Pittsburgh, one thousand eight hundred miles. Last summer a prize pigeon whose home is in Fort Wayne, Indiana, was taken to Abilene, Texas, and there set free. The following day he was back in Fort Wayne, having traveled the thousand miles over six states in thirty-four hours, twenty-two minutes and twenty seconds. Since he flies only in daylight, you will have to subtract the night hours to figure this pigeon's actual flying speed, a rate fairly comparable to that of the fastest express train."

As early as King Solomon's time, the homing instinct of the carrier pigeon was known and made use of. The names of victors in the Olympic games of ancient Greece were carried to their home cities by pigeons. One of the early sultans of Bagdad established a postal service in which pigeons were the carriers. A

Roman army, besieged in Modena in the year 43 B. C., communicated with its allies by means of pigeons.

During the Napoleonic wars, Nathan Rothschild, the great financier, established pigeon lofts at various points on the continent of Europe, and by a combination of fast boats and carrier pigeons his agents kept him informed of important developments affecting business. It is said that his London office had news of the defeat of Napoleon at Waterloo hours ahead of the British Government, and his speculations on this one bit of information alone netted him an immense fortune.

With the invention of the telegraph, the use of pigeons as messengers waned, but there remained in all civilized lands a few admirers who continued to breed the beautiful birds. In 1911, a British authority reported that, "in view of the development of wireless telegraphy, the British Admiralty has discontinued its pigeon service," and he discounted the value of pigeons in war service.

But this opinion was quickly changed with the outbreak of the World War. By the time the United States entered, all belligerents were using pigeons, and the records show that the birds functioned with a higher percentage of delivered messages than radio, telegraph, telephone, or runners. In the American Expeditionary Forces ninety per cent of all messages intrusted to pigeons reached their destinations. At the Armistice nearly nine thousand pigeons were in service with the armies in France.

Pigeons carried many messages from refugee boats and relief planes during the Mississippi River Flood of 1927.

AIR pilots have learned that they can be useful. Engine trouble forced an airplane down across the Mexican border, and its occupants found themselves helpless, foodless, and without water in a barren wilderness. Fortunately, they had a basket of pigeons from the loft at Douglas, Arizona, one hundred and twenty-five miles away. Birds were released with messages, and within four hours a relief plane arrived.

Even more hazardous was the plight of two men in an airplane off Hawaii. The propellor shaft broke, and they were forced to descend on the sea, many miles off shore. They released two pigeons with messages reporting their plight; the birds raced into Honolulu at a mile a minute; and in less than forty minutes a speed boat came to the rescue of the shipwrecked aviators.

It is a curious thought that the same kind of messenger that served the Greeks and Romans two thousand years ago aids the ultra-modern airplane in its hour of helplessness. The swift, powerful, dependable pigeons of today are the inheritors of these centuries of encouragement of their ruling instinct.

"And it is a *ruling* instinct," emphasized Mr. Ross. "In a good homing pigeon, *everything* is subordinated to the will to get home. He will starve, he will breast wind and storm, he will risk gunfire and all kinds of terrifying conditions, he will fly to exhaustion and die, before he will abandon his purpose to get home.

"We sent a shipment of pigeons from Fort Monmouth to Topeka, Kansas, and when the man in Topeka was opening the baskets a pigeon escaped. This happened in the dead of winter, when snow was on the ground. But a blizzard could not stand between that pigeon and home. In two weeks she showed up at the loft where her nest had been. She must have had a bitter tussle with the weather in the journey of twelve hundred miles over frozen country. She was almost starved—mere skin, bones, and feathers—and near exhaustion."

MR. ROSS says he has had the same kind of thing happen in midsummer, when there are berries, grain, and other food to be picked up along the way. Do you suppose a pigeon tarries to indulge his appetite in these delicacies? Not if he is a true homer.

"We found a pigeon on June 3d at Sandy Hook," said Mr. Ross. "He had been beaten down in a rainstorm and lay drenched and exhausted on a lawn, nearer dead than alive I nursed that pigeon ten weeks. It was four weeks before he could rise above the floor, and seven weeks before he could fly. I kept him three weeks more to make sure he was sound, and then liberated him with a message. Next day a grateful letter came from the owner, an artist at Far Rockaway, on Long Island, New York. He wrote that the pigeon had been in a race from Charlottesville, Virginia, released on May 29th. Soon after the beginning of the race a storm arose, and that bird battled with the elements four days, finally to be beaten down on the New Jersey coast across the bay from his Far Rockaway home.

"In the same race the army lost two beautiful pigeons, and in a race in October (1927) we lost sixteen. In each case terrific winds blew up, accompanied by drenching rain, and the pigeons, whose instinct would not permit them to seek shelter in another home, simply flew until they dropped, and died of exhaustion and drowning.

"Our training takes this inborn homing instinct and keys it up to the highest pitch of intensity. At the age of four weeks, as soon as the newly-hatched 'squeakers' are able to fly, their training begins. The first step is to release them from the loft and allow them to fly around and get their bearings.

"The second step is to teach them to enter the trap of the loft immediately upon returning from a flight. This is very important, for if a pigeon flies home with a message and perches on a tree or a roof, or if he tantalizingly hops out of reach every time you try to lay hands on him, he can hardly be called a satisfactory messenger.

"We train the young birds to trap quickly by keeping them in the loft without food for twenty-four hours. Then we take them outside a short distance, and release them, one by one. Inside the loft a man rattles a can full of grain, and the hungry birds rush for the entrance trap, and hop through like rush-hour passengers hurrying onto a waiting train. After a week of this, the pigeons get the idea that as soon as they reach home they are to trap. We encourage the habit by always feeding them as soon as they enter the loft.

"The first practice flights are a few hundred yards, with the loft in sight, and the distance is gradually increased to miles. Then begin group flights. We take fifteen or thirty pigeons at a time, carrying them in baskets ten miles from the loft, and release them, timing the second of release, and men at the loft clock the arrival of each bird. It is possible to do this, because each pigeon carries on his leg an aluminum band with his registered number. The distance of these daily flights is increased, until the young pigeons are doing one hundred miles at a clip.

"After we have trained the birds in groups, we fly them in pairs—though we don't release two mates together. Pigeons mate and stay mated throughout their lives, and we utilize this mating instinct to reinforce the homing instinct. When a pigeon has youngsters at home, he will increase his speed several yards beyond his average rate. A hen will fly faster to youngsters than a cock.

"THEN we train the birds in single flights. It is more difficult for a pigeon to fly a long distance alone, because in a group he has the advantage of the 'drag' of all the other birds. Alone, he is his own pilot, his own intelligence officer, and if night comes before he reaches home he must pick his own roosting place and spend a lonesome night."

"Won't he fly at night?" I interrupted.

"We have four pigeons at the army post in Hawaii that have flown sixteen miles at night, but they are very exceptional. Ordinarily, a homing pigeon will seek a temporary roost as soon as the sun sets, and at the first crack of day he will take off.

"I'm at work now with an interesting experiment. I've put twelve squeakers in a small loft on the edge of the creek here at Fort Monmouth. I selected that location because they can get a little light in the reflection off the water. These birds are kept in their loft all during the daylight hours, and are released for exercise only at dusk. It is hoped that this association of darkness with flying will become a fixed idea in the brains of some of them. Later on, I'm going to take them out for a one-mile flight in the middle of the night, and see how they do. If any show an inclination to fly, I'll mate them. But I'll feel satisfied if, from this experiment, I find one pair that show night-flying ability.

"However, I figure that it will take three generations to produce successful night-flying, so it is from the grandchildren of this pair that I hope to discover the real strain of night flyers.

"If we can breed night-flyers it will be a great gain for the army. They would be far more useful than any pigeons we now have, because they would be less vulnerable to sharpshooters, hawks, eagles, and other enemies. When you remember that the Lost Battalion released five pigeons, and that only Cher Ami got home, and that he arrived wounded, you readily see that the life of a war bird has its hazards. Some of the European armies had falcons which were trained to pursue pigeons and kill them.

"In this country, the principal enemy of the pigeon is the hawk. At every loft we keep a loaded shotgun, and when pigeons are out a man is always on duty with the gun. We have shot quite a few

ONLY CHRYSLER CAN GIVE CHRYSLER PERFORMANCE

Illustrious New Chrysler "72" Sport Roadster (with rumble seat) $1595

It is not strange that an entire industry should be striving to follow Chrysler's leadership in performance. The sweeping public preference for Chrysler standards of speed, dash and power has given rise to this emulation . . . ¶ Let your mind slip back just four short years. Recall the bulky, cumbersome motor cars of that date . . . ¶ Then contrast the first Chrysler. Dashing in performance, most alluring in its new, low-swung grace and brilliant colors, most modern in its ideas of riding and driving comfort—it marked the first great step in the swift passing of then existing standards . . . ¶ From that day Chrysler's speed, power and dash, Chrysler's smartness of line and tone, Chrysler's luxury of appointment, Chrysler's safety, became the pattern for all . . . ¶ But in the meantime Chrysler's progressiveness—never content with past achievement—has forged on to new heights . . . ¶ Chrysler engineers have pioneered the worthwhile improvements of the past four years—developing these improvements first for their cars of higher price and then, through Chrysler Standardized Quality, enriching beyond comparison the value of its lower-priced cars by the inclusion of such outstanding features . . . ¶ The public has learned that it always obtains greater value in any Chrysler than in any other car costing hundreds of dollars more . . . ¶ It realizes more and more that only Chrysler can give Chrysler performance, Chrysler quality, Chrysler style and Chrysler value—and is buying its cars accordingly!

CHRYSLER

Great New Chrysler "62"—Seven body styles $1065 to $1235. *Illustrious New Chrysler "72"*—Seven body styles $1545 to $1795. *New 112 h. p. hawks here at Fort Monmouth; but I have found that when a pigeon is in perfect health and good flying trim he can generally outfly a hawk.

"On one of his expeditions into the Arctic, Donald MacMillan took a number of pigeons, and after getting into the North he began to release them with messages. Eagles pounced upon the pigeons as soon as they got into flight, and after seeing a few of his birds sacrificed Commander MacMillan decided not to risk any more such sacrifices.

"Do you remember the explorer Andrée, who embarked from Spitzbergen in 1897 in a balloon bound for the North Pole? He carried six pigeons with him. One pigeon got back with a message two days after the departure; but nothing more was ever heard from Andrée. Since learning of MacMillan's experience, I have thought that perhaps Andrée's pigeons were victims of the fierce Northern eagles."

I asked Mr. Ross how a pigeon that has become established in one home can be shifted to a new home.

"That is done by a process which we call 'settling'," he answered; "and it requires the greatest patience and sympathetic handling on the part of the person in charge. Pigeons are very temperamental, and unless the pigeoneer is gentle and understanding in his treatment of the birds, they never will settle.

"Not 'ong ago we sent two mobile lofts to Camp Dix, one in charge of a sergeant, the other in charge of a private. The sergeant had his birds sett ed within ten days; but every time any of the private's flock were released they came hurrying back to Fort Monmouth. That kept up for three weeks. Finally we recalled the private and placed his birds under the sergeant. Within three days the sergeant had them settled. They were so thoroughly settled at Camp Dix that when, some weeks later, we brought them back here, to their birthplace and original home, and released them, they turned instantly and flew to Camp Dix.

"THERE are some technical rules, but the personality of the pigeoneer is the greatest factor in successful settling. The younger the pigeon, the easier the task. If a bird is old, we first release him hungry and hobbled, placing him on the roof of the loft, and quickly trap him by the food call. After two days of this exercise, we remove the hobble, liberate the pigeon about one hundred feet from the loft, and give him a trapping exercise. Every time he traps, he is rewarded with some food delicacy. Young pigeons may be settled within a week, older ones require several weeks, or even months.

"We have one pigeon, Arthur, that has taken two years to settle. He was born at my old place in Philadelphia and lived twelve years there, so it's no wonder that he got it fixed in his mind as home. After repeated returns to Philadelphia, he has finally decided that Fort Monmouth is where his heart is, and now I have no fear about liberating him. But we used to spend a great deal of time chasing down to Philadelphia. We never failed to find Arthur on the roof of his old home—and he never failed to come down to our whistle."

ONE can understand a pigeon's attachment for home. "But, how does he know the way home?" I asked Mr. Ross.

"Ah, there you ask for more than any human knows. In a flight of a few miles, a pigeon may be guided by sight—from the upper air he may see landmarks for several miles. But when a pigeon is shipped in a closed basket in an express car, and released one thousand miles from home, how can he find any landmarks?

"Some have thought that a pigeon 'homes' by retracing the route over which he was carried. But I don't think this can be true. We have sent pigeons northward to New York or Jersey City, there to be reshipped on an express train southward to Virginia for a race. In this race our pigeons beat Jersey City pigeons, and they couldn't possibly have done it if they had had to retrace their route through Jersey City and then double back here.

"Others say that a mechanical sense of direction guides the pigeon home. I am inclined to think that his piloting is more than blind instinct, and is guided partly by intelligence. Pigeons will not fly in a fog. I have seen migrating birds by the thousands smash against the Channel Island Lighthouse as they flew headlong through a dense fog. No doubt they were flying in the exact direction of their destination, guided by blind instinct; but the results were most disastrous. Pigeons know enough to avoid this danger.

"Pigeons also avoid wide bodies of water, if it is possible to route their flying over land. Instead of crossing a lake or a bay, they will follow the shore, and circle around the water. We released pigeons in New York, and instead of flying in a straight line to Fort Monmouth, which would take them across the bay, they turned west, crossed the narrower waters of the Hudson, and then struck southward overland to Fort Monmouth.

"Still another evidence that pigeons put reasoned judgment into their flying is the fact that they vary their flying altitude according to conditions. I have seen them flying only ten feet above ground, to avoid a strong upper wind. I have seen the same pigeons flying so high that they were almost out of sight. When they find a wind blowing in their direction, they take advantage of it. When they have to buck a wind, they tack like a sailing ship."

Though a sympathetic master can easily settle a pigeon in a new location, he finds it difficult to settle a captive. A good bird is smart enough to know when he is being stolen. In 1924 the navy entered several pigeons in a six-hundred-mile race. One of the best failed to get home; and finally was given up for lost. But, two years later, the lost pigeon dropped out of the sky one afternoon. His wing feathers showed that they had been clipped, and it seemed obvious that he had been held a prisoner. But two years' detention was not enough to weaken his attachment to his legitimate home.

But not every pigeon is a paragon of intelligence and loyalty. "You can breed other domestic animals to a standard," said Mr. Ross; "but with homing pigeons there is an unseen quality, and you cannot always be sure of results. Some outlaws are hatched every year, and some numbskulls, and as we discover these below-par birds we weed them out. If we find that one of our pigeons is stopping off at some other loft, we are through with him. We want only loyal couriers that we can count on for one hundred per cent service. A great many strays, from other lofts, drop in at Fort Monmouth. I give each of them two chances to go home. If he comes back after the second chance, we get rid of him. To allow him to stay would weaken our own stock.

"We are developing a distinctive American type of pigeon, which is smaller of body than the European homers and has a smoother head, which offers less wind resistance. We are specializing, too, on birds of solid color, as being less visible. These results are being obtained through selective breeding, followed by the elimination of youngsters that do not show the desirable qualities."

WHEN I asked Mr. Ross to name the most remarkable pigeon he has ever known, he answered, "Arthur."

"What! The old fellow that kept running back to Philadelphia?"

"Yes, Arthur is the smartest, the finest, the most dependable pigeon that I've ever come in contact with. Many a time I have been asked to put a price on him, but I always answer, 'No money could buy him.' He may not be worth a dollar to-day—for he is fourteen years old, and I never knew a pigeon to live beyond nineteen years—but to me he is priceless. He is the most affectionate, as he is the most intelligent, individual among the six hundred here. I can talk to him, and feel sure that he understands.

"In his prime, Arthur won many races, and his children and his grandchildren have won races for me. He weighs around eighteen ounces, and I've known him to come in from a long-distance race utterly exhausted, weighing scarcely twelve ounces, worn down to skin and bone. I have had faster birds, but they were not so reliable; I couldn't count on them to the last breath. It was said of Man of War that he was such a fine race horse because he gave all he had. The same is true of Arthur.

"Arthur always gave all he had. A man is lucky if he gets one such pigeon in a lifetime. I'll feel proud if we can produce one more Arthur for the army out of the six thousand pigeons we have."

YOU MIGHT think a "weather man" has a dull job. Far from it. His fingers are literally in every pie. Open-air events, weddings, funerals, christenings, surgical operations, business, great construction jobs are guided by his forecasts. Next month you'll read a brisk interview by Courtney Ryley Cooper with Patrick O'Connor, who has dispensed weather in the vicinity of Kansas City, Missouri, for more than thirty-five years. O'Connor explains in this article just what unforeseen disturbances may upset his calculations and bring forth vials of wrath on his unoffending head.

Mobiloil

Quality

is acknowledged the world over

Over the worst roads of Africa and Asia—over the boulevards of Paris and London—through the torrid heat of Sahara and the long, bitter winters of Norway—your Mobiloil has proved itself first in quality.

Travelers returning from any part of the world bring back the same story—the familiar red Gargoyle sign everywhere, symbol of quality and correct lubrication.

If you ask "what oil?" from the driver of the car that takes you hurtling over the 750 miles of barren mountain and desert road from Beirut to Bagdad he will tell you—Mobiloil.

If you ask "what oil?" in the Citröen cars that first crossed the Sahara desert you will hear—Mobiloil.

Or if you ask "what oil?" in the cars that carry you swiftly over the smooth touring roads of Continental Europe you will usually hear—Mobiloil.

Hard jobs everywhere—Mobiloil quality everywhere.

And the same Mobiloil quality here at home for your car.

You are always sure with

GARGOYLE

Mobiloil

"Good-bye" now --- to

Half-Clean Faces

There's pore-dirt deep in EVERY face — but watch this pink cream roll it free!

Every inch of air, says the U. S. Weather Bureau, is alive with millions of tiny specks of soot. Motor puffs, chimney smoke, dusty streets—no one escapes!

Even indoors, as you can see in a ray of sunlight, this rain of dust goes on. It falls onto your face. Works into the pores. Gets jammed down deep UNDER the skin.

Washing can't budge pore-dirt. But scoop a little Pompeian Massage Cream from the jar. Notice the color as you rub it into the skin . . . clean pink!

A two-minute massage. Out rolls the dried cream, gray with pore-dirt that hid in your face! Boy, how fine that massage feels!

Photograph taken under lens of powerful microscope showing section of skin before using Pompeian Massage Cream.

Electric lights, the close-up of a woman's searching eyes . . . yet he need not worry. You step out tonight with a face really CLEAN! Pompeian is 60 cents at any drug counter—but you're welcome to test it FREE! Send the coupon now!

Photomicrograph of skin after using Pompeian. Note dried pellets of cream, dark with pore-dirt it has rolled free.

POMPEIAN MASSAGE CREAM

FREE TRIAL OFFER

The Pompeian Company, Dept. 900-F
595 Fifth Avenue, New York.
In Canada: 72 St. Ambroise St., Montreal.

Gentlemen: Please send me a free trial tube of Pompeian Massage Cream . . . enough for two cleansing, invigorating facial massages.

The Frame-Up

(*Continued from page 45*)

"Nothing in particular. Just thought you'd like to know."

"Why?"

"Because I sort of aim to do a little business with you. I've got something to sell."

"I'm not in the market for anything. There's the door."

Jim turned and surveyed the mute panels. "Well, dog-gone if it ain't. Now, who'd have thought—"

"Use it!"

Jim rose ponderously. "A'right, Mr. Ackerman. Guess I can take a hint as well as anybody. I'm terrible subtle." He waved a limp and languid paw. "See you in the penitentiary."

The figure behind the desk grew rigid. His voice came in a harsh croak. "Wait!" He licked at his dry lips. "What's that you said?"

"That I'd see you at the penitentiary. You see, I'm a sort of detective, Mr. Ackerman, and I figured you'd be going up for a stretch just about the same time as my friend Harry Whalen. So it'd be only nice for me to stop at your cell and say hello."

"Sit down!" Quincy Ackerman's eyes were flaming with fear. "You said you had something to sell me—"

"But you ain't interested. And you kind of looked at me as though you weren't partial to fat men. So I guess—"

"What is it?"

"Oh, well." Hanvey reached into the pocket of his coat and produced a letter. "Just a piece of paper, Mr. Ackerman. Figured you sort of might be a collector of such interesting documents. The price of it is two thousand dollars. Cash."

The other had himself under better control. "Why should I pay two thousand dollars for that letter, Mr. Hanvey?"

"Gosh! I don't know. It ain't even a new letter, and the stamp on it ain't worth a durn. Been canceled and everything. But Harry Whalen said you was a sentimental guy and maybe you'd like to have it as a souvenir. He says you wrote it to him a long time ago, sort of thanking him for a favor he done you—something like taking all the blame for a little deal you and him was mixed up in. Some promotion proposition. Harry sort of had the idea that if you didn't want to buy it, the district attorney might be willing."

ACKERMAN extended a trembling hand. "Let me see it."

"Oh! sure—you can see it. But you can't hold it. Not that I don't trust you . . . but I got to be careful." Hanvey opened the letter and held it out to the other's gaze. "Pretty little letter, ain't it? If I was a rich man, I reckon I'd pay two thousand dollars for it and call it a bargain."

The thin man was trembling. "Whalen swore to me he destroyed that letter."

"Did he now? Who ever would have thought Harry could make such a mistake? And, besides, wouldn't he have been silly to tear up the only hold he had over you? Of course you're a gentleman, Mr. Ackerman; but suppose you hadn't

A Letter from Miss Neva Lamb of Pocatello, Idaho

Dear Sirs:

When I was a little girl, there were a lot of us children learning to care for our own teeth. We argued and joked over choking on tooth-powders, and eating tooth-paste. When Mother learned about Pebeco Tooth Paste, she bought that kind for us all to use. It did not taste like candy, or gum, but we liked the wholesome, salty taste.

Ever since then, for twenty years, I have used Pebeco. I like it because it cleans thoroughly, and leaves a fresh, cool taste; and because it keeps my mouth and gums healthy.

I am twenty-six years old. I have good, sound, white teeth, that are much admired. Last July, I went to a dentist and had my teeth examined and cleaned by a dentist for the first time in my life. My teeth had no cavities—are 100% sound.

(Signed) NEVA LAMB

You smile with gay assurance

Mouth sweet and healthy .. teeth everyone admires

HOW DELIGHTFUL to know that your teeth are white and healthy, your breath sweet.

The special salt in Pebeco gives you that joyous assurance. For it summons the mouth fluids. They bathe the teeth, between the teeth, the whole mouth. Food acids which cause decay and bad breath are briskly neutralized.

A famous physician found that the chief cause of tooth trouble was a slowing up of these useful mouth fluids. He developed Pebeco's formula to keep them active.

The good-morning feeling Pebeco gives your mouth starts the day gayly and lasts for hours. The bedtime brushing protects your teeth for the night.

Made by Pebeco, Inc., a division of Lehn & Fink Products Company. Sole distributors, Lehn & Fink, Inc., Bloomfield, N. J. Distributed in Canada by Lehn & Fink (Canada) Limited.

Keeps the mouth YOUNG··

...and all they did was

Mail this Coupon!

This frankly written advertisement tells how thousands found a new quick way to shave, with remarkable results

THE men pictured above could tell you a lot about shaving. They are men just like yourself . . . with stubborn beards . . . and tender skins.

Ask any one of them about razor-pull or face-smart and he would tell you honestly that he doesn't dread it now.

They've simply discovered a new, quick way to shave . . . found a lather that gets whiskers off without drag or scrape.

It's a totally different principle of beard-softening. Small bubbles... that's the theory of it.

You'll see the difference the minute you try it. See it in your mirror. Feel it in the velvet smoothness of your skin.

Colgate lather is designed to absorb more water . . . to scientifically drench your beard with moisture right at the base, where the razor work is done. It's a "small-bubble" lather. For small bubbles hold more water. They carry it closer to the base of your beard.

Ordinary Lather

Photomicrograph of ordinary lather surrounding single hair. Note how the large bubbles hold air instead of water against the beard.

Colgate Lather

Under identical conditions note the closely knit texture of Colgate lather. The small bubbles hold water instead of air against your beard.

That's the principle, men. Now here's what it does for you:

1. The soap in the lather breaks up the oil film that covers each hair, floats it quickly away.

2. The billions of tiny, moisture-laden bubbles seep down through your beard . . . crowd around each whisker . . . soak it soft with water.

Thus your whiskers come off clean and smooth. No razor-pull. No stinging and smarting.

Test it . . . compare it. We'll cheerfully abide by your decision.

SEVEN WONDERFUL SHAVES..FREE..If you're willing to judge Colgate's on its merits..we'll cheerfully pay for the test. Mail coupon

FREE OFFER, MEN!
Colgate & Co., Dept. 501F, 595 Fifth Ave., New York
Please send me FREE sample of Colgate's Rapid Shave Cream. Also sample of Colgate's "After Shave."

been. For all Harry knew—if he destroyed the letter—you might some day try to frame him into the pen, and that would be terrible. Not that such an idea would ever occur to a fine gent like you; but Harry had to be mighty careful."

Ackerman reseated himself at his desk. "Two thousand?"

"Cash."

The man wrote a check, summoned his secretary and dispatched her to the bank for the money. Then he stood near the window, regarding Hanvey through half-closed eyes. The man was impossible: a caricature; yet he gave Quincy Ackerman a very uncomfortable feeling. Instinctively, Ackerman knew that Hanvey spoke the truth—he was getting out very cheaply. And he had been an idiot to believe that Whalen destroyed that letter.

The money was received and paid over to Hanvey. The huge detective extended the letter to Ackerman.

"Suppose you burn it," he suggested. "We'll both be happier knowing it is destroyed."

Ackerman made a thorough job of it. He heaved a sigh of relief as Hanvey departed. He knew now that he had been skating upon very thin ice.

MONDAY morning at precisely nine o'clock Harry Whalen entered the First National Bank. On the curb outside Jim Hanvey was standing. Through the glass doors he could see Whalen, but not hear him.

Whalen was very much the business man. He approached the "Notes and Discounts" window and nodded to the clerk on duty.

"I have a two-thousand-dollar note coming due to-morrow," he said. "I'd like to take it up."

The note—endorsed by Quincy Ackerman—was produced. Whalen paid the two thousand dollars and accepted the note in exchange. Then he joined Hanvey outside and exhibited the slip of paper.

"And now," suggested Hanvey, "suppose you tear that into little tiny scraps."

Whalen ripped the thing across and then across again. Eventually, he held in his hand a hundred bits of paper. He walked down the street with Hanvey, dropping them one by one.

"And that," declared the fat detective, "is that. Our gentle friend, Ackerman, couldn't prove anything now in a million years, Harry. The note is completely and absolutely gone, and you are in the clear."

"And I have you to thank," said Whalen hoarsely. "Believe me, Jim, the wife and I ain't going to forget this in a hurry."

"Aw, dry up! Besides, this whole thing ain't finished yet. Remember that you're an honest man—and you've got a little business to attend to later this morning. Let's drop into this telephone booth a minute."

Hanvey produced a nickel and called a number. The harsh voice of Mike Lannigan answered.

"Mike? This is your old buddy, Hanvey."

"Well?"

"Sure. I'm fine."

"What do you want?"

"Heard from Quincy Ackerman this morning?"

"Say, listen here, Hanvey. What have you—"

Doctor Sun

THE world's greatest physician is located more than 92,000,000 miles away. He is Dr. Sun. And the one great medicine that he sends is sunlight. On bright, sunny days his free dispensary is open to everybody, everywhere. But in northern latitudes, his treatments—generous applications of ultra-violet rays—are most successful during the summer months.

EDWARD J. STEICHEN

Sunlight is the finest tonic and health-builder in the world. It works its cures, mysteriously, through the skin. In sunshine there is a wonderful healing power—the ultra-violet rays. These rays are most effective from April to November and are particularly strong from June to the end of September.

Ultra-violet rays do not penetrate ordinary window glass, or clothing except the very lightest in color and weight. Nor do they penetrate, to any great extent, smoky and dust-laden atmosphere. For those who can put on bathing suits and enjoy the sunshine at a beach on ocean, lake, or river, the problem of getting sufficient ultra-violet radiation is solved. But others, too, may receive the benefits of the sun's rays by using ingenuity. At some time during the day the sunshine usually pours into some room in the home where one may lie without clothing in its unobstructed light. A canvas tent without a top, in the yard or on the roof or open porch, will serve.

Sun baths, taken regularly, increase the red corpuscles of the blood in great numbers. The supply of calcium, iron and phosphorus in the blood is augmented. Many physical disturbances partially due to sunlight starvation—notably rickets and anemia—can be relieved by daily sun baths. Certain skin diseases can be healed more rapidly when treated by the sun's rays. Sun baths are a valuable tonic for the organs of the body. The ultra-violet rays kill bacteria and germs.

Dr. Sun's best office hours are in the early morning and late afternoon. At mid-day his treatment is more likely to scorch than to heal. Even at the best hours, over-exposure does more harm than good. It is a mistake to try to get tanned too rapidly. Excessive exposure, especially on parts of the body not accustomed to direct rays of the sun, may cause not only painful burns but also serious skin trouble. Exposure should be gradually increased from day to day. So essential is sunlight to the body that science sought and has found a way to manufacture ultra-violet rays that may be used helpfully in the winter and on days at other times of the year when the sun's rays are weak. But great care should be exercised. Artificial sunlight treatments may be extremely harmful if given by anyone not familiar with their power.

In praising the value of natural sunlight, one eminent physician says, "When we have added together all the healing virtues of the Finsen light and Radium and the Roentgen Rays, and all the uses of heat rays and electrical waves in the care of atrophied or unused muscles—when every particular form of radiation has been tried and exploited to the uttermost—the value of natural sunlight upon us, whether as therapeutic in certain forms of disease, or as hygienic and prophylactic, outweighs all these other things as the Atlantic outweighs the contents of the Olympic swimming pool."

Plan, definitely, to store up health. Get your share of the ultra-violet rays in summer, while they are at their best. A booklet, "Sunlight, the Health-Giver," tells of many benefits to be derived from the sun's rays. It will be mailed free upon request to the Booklet Department, Metropolitan Life Insurance Company, One Madison Avenue, New York City. Send for it.

REVEALED . . . BY YOUR MIRROR

Dental arches (teeth and gums) differ. Each requires a different type of tooth brush to win gloriously white teeth, coral-firm gums. Read below how easy it is to let your mirror tell your type, to know exactly what kind of brush is best for you to use.

1—Tufted Pro-phy-lac-tic—Most dental arches are full-formed and require this type of brush.

2—Oval Pro-phy-lac-tic—scientifically designed for small, more sharply oval arch.

3—Masso Pro-phy-lac-tic—For dental arch that has tender gums. Massages as it cleans.

Face your mirror with these FACTS

THANKS to the help and advice of the dental profession, Pro-phy-lac-tic now presents three new and distinctly different types of tooth brushes. Each fills a specific dental need. All of them embody important advances in design. All have won the hearty approval of leaders in the movement for greater care of teeth and gums.

Your mirror helps you choose

To choose the right brush for yourself, simply spend ten seconds with your mirror. Decide what type of dental arch (teeth and gums) you have. Then choose and use the Pro-phy-lac-tic that is scientifically designed to bring your type the good health that is rightfully yours.

It's easy. If your mirror shows a dental arch of normal size as shown by a full-formed face and mouth—the brush for you is the new Tufted Pro-phy-lac-tic.

But if your mirror reveals a small, sharply oval facial contour, your dental arch, too, is small, more oval in shape. Then the Oval Pro-phy-lac-tic is the right brush for you.

Now look again. Examine your gums carefully. If they are pale and lifeless looking — you need the new Masso Pro-phy-lac-tic. This brush massages as it cleans. It suits both large or small dental arches that require special care.

In a few weeks—the difference

Use your new Pro-phy-lac-tic for a few weeks. Then look into your mirror again... if you want to see how much the right brush can do to give you whiter, sounder teeth—firmer, healthier gums.

All Pro-phy-lac-tics are alike in their uniformly high quality. All have specially selected bristles, transparent handles in new beautiful colors, and are packed in individual sanitary containers.

Pro-phy-lac-tic Brush Company, Florence, Mass.
Pro-phy-lac-tic Brush Co. (Canada), Limited, Montreal

Pro-phy-lac-tic Tooth Brushes

different in shape and size . . . alike in quality

"I'll be at Ackerman's office at ten o'clock. This deal ain't entirely closed up yet, Mike. Suppose you be there. It most likely is going to be an interesting session."

He was grinning when he rejoined Harry Whalen. "Just invited Mike Lannigan to join us at Ackerman's. Thought it might be fun to see those two suffering together."

"Yeh!" chuckled Whalen. "It might."

WHEN they reached Ackerman's office, Mike Lannigan was already there, his broad figure silhouetted against the window frame. He stared venomously toward the visitors.

"Well, Hanvey," he rasped, "I guess you think you're awful smart."

"Gosh, no, Mike. I'm dumb—an' lucky."

"Hmph! What did you want me here for?"

"To prove something."

"What?"

"Ain't I been telling you all along that Harry, here, is an honest man? Ain't I?"

"What about it?"

"Show 'em, Harry."

Whalen moved around the desk and borrowed Quincy Ackerman's pen. That gentleman watched his visitor with distaste not untinctured by curiosity.

Harry Whalen proceeded in a very businesslike manner. He produced a blank note from an inner pocket and wrote rapidly. Then he extended the slip of paper to Ackerman.

"I'm much obliged for the loan, Ackerman," he started; but the tall man cut him short:

"I didn't make a loan."

"Oh! yes, indeed you did. And that is my note for the two thousand dollars cash you gave Hanvey for me, with interest at eight per cent. It comes due in six months—and I'll be well able to take it up by that time."

Ackerman turned growlingly to Hanvey.

"What's all this tomfoolery? You know perfectly well I *gave* you that two thousand dollars."

"He didn't ask for a gift, Mr. Ackerman. All he wanted in the first place was a loan. You see, when you endorsed his note originally, you promised to renew if it became necessary. And since you were planning a few funny tricks—by advice of my detective friend here—Harry thought he'd work things this way."

Ackerman tossed the note aside. "Let's not mince words, Hanvey. I *bought* that Whalen letter for two thousand dollars. It was worth it."

"Sure, Ackerman. It certainly would have been."

Quincy Ackerman's beady eyes flashed to the fat, good-natured face of the detective.

"What do you mean—'Would have been'?"

"Oh! nothing much. But just between us friends, Mr. Ackerman, I'll explain that I advised Harry to fight fire with fire. He used to be uncommon good with other folks' handwriting—"

"You mean—?" gasped Quincy Ackerman.

"Sure," grinned Jim Hanvey. "The original letter you wrote Harry was destroyed years ago. The one you bought was a first-class forgery!"

Her Pretty Teeth

a social asset

Read how Miss Marjorie Sidney has kept her teeth sound and lovely for 14 years with the daily use of this one cleansing cream

NO wonder men pay tribute to a smile like this. Brilliant . . . flashing . . . glorified by lovely teeth since childhood days.

For 14 years Miss Marjorie Sidney has used but one dental cream . . . and today her teeth are more beautiful than ever.

Miss Sidney when she started using Colgate's

They flash a clear message to you and every one else anxious to keep teeth healthy and attractive for years to come.

She gives much of the credit to Colgate's. "A daily cleansing with this famous dental cream . . . and a trip to the dentist every six months" —that's her secret.

Not an unusual record

In this country, and in foreign countries the world over, you will find thousands and thousands of men and women who began using Colgate's ten, fifteen, even twenty years ago, and whose teeth today are exceptionally sound and beautiful.

Many of these people are grateful enough to write to us, sincere, unsolicited reports, because they are proud of the soundness and attractiveness of their teeth.

There is nothing mysterious about these enviable results.

The men and women fortunate enough to secure them did nothing that you cannot easily and quickly do yourself.

They visited their dentists for periodic inspections. And they used Colgate's.

Choose your dentifrice on the basis of results. Follow the lead of those who have already kept their teeth sound for years.

Simply adopt for your own use the dentifrice most popular among people with well-preserved teeth.

Made specifically to clean teeth

You see, Colgate's Ribbon Dental Cream stands apart from most dentifrices. It is expressly and scientifically made to get teeth clean.

With Colgate's, cleaning is not a side issue, or an added feature . . . it is the main thing.

Naturally, no dentifrice that you have ever used will clean your teeth more thoroughly. And, mark you, this supremely efficient cleansing is the basis of beautiful and long-lived teeth.

On the one hand you have Colgate's, the chief feature of which is thorough cleansing. On the other you have the fact that countless people who have used Colgate's for years now have teeth that are exceptionally fine, sound and healthy.

Also, wouldn't it be an immense satisfaction to know that the dentifrice you were using was the one which dentists recommend most frequently?

So, for lovely teeth . . . for teeth that make your smile the social and business asset that it should be . . . ask your druggist for Colgate's. Or, if you prefer, let us send you a sample to try.

CLEAN

Years ago we set out to make the best dentifrice possible. We interviewed leading dental authorities. They told us that the one thing a dentifrice should do is to clean teeth. We then produced Ribbon Dental Cream—designing it to do that one thing superlatively well. It is not medicated, because all experiments in the meantime have sustained the original principle that cleansing is the only thing a dentifrice can properly do.

Colgate & Co., Dept. 201 F, 595 Fifth Ave., N. Y.
Please send me a Free sample of Ribbon Dental Cream.

Your shave is only as good as your lather

Not every lather will soften hair. It's what goes on in the lather that determines whether your face will emerge smooth, fresh, soft and fit.

When you shave with Mennen Shaving Cream the advantage is all in your favor for a swift, sweet shave. In Mennen and Mennen only do you get the benefit of *dermutation. Dermutation* isn't an accident. *Dermutation* is a process in Mennen lather—and put in there for a purpose. For unless your beard is properly softened, the razor is bound to run into trouble. Every hair in your beard offers a tiny obstacle to the razor—a tough, horny little shaft that must be thoroughly softened if the razor is to cut it easily and properly. Even the keenest blade will falter against a beard only half-softened. It either hurdles over the hairs, or else cuts only part-way through, tugging and yanking painfully at the hair roots instead of cutting square and close at the skin surface.

That is where Mennen *dermutation* gets in its work — the most important part of any shave! Water instantly releases into activity this special action in Mennen. *Dermutation* completely softens the beard without finger rubbing. It levels the tiny skin peaks around every hair, smoothing the skin so that the razor glides cleanly and evenly without nicking or scraping these minute mounds. No more rawness. No tight, hot, drawn feeling or smarting. No caustic to burn, either. A swift, sweet shave, with five soothing emollients in the heavy, luxuriant Mennen lather that leave the face fresh, soft and clean for hours to come. And equally good in any water—hot or cold, hard or soft!

You, too, will appreciate Mennen Talcum for Men

More and more men are using a light sprinkle of Mennen Talcum for Men on the shaved face. It is neutral tinted, does not show, tones down face shine—feels good to the face and protects it, too. Also made in stick form. The Mennen Company, Newark, New Jersey, and Toronto, Ontario.

NOW made two ways
Mentholized* and *Regular

For those who like the brisk, tingling coolness of a dash of menthol in their lather; for those who like its reviving freshness, we now have good news. You can now get Mennen Shaving Cream *mentholized* as well as regular. Thus you may enjoy this special cooling feature in Mennen, the only shaving cream that softens your beard by the *dermutation* process. To get Mennen *mentholized*, ask your dealer for the tube with the red ball. He has it, or can get it for you. No wonder the hard-to-shave and the comfort-lovers use Mennen.

"Doc" Kinkade—the Man Who Put Us Across

(*Continued from page 23*)

go back to college, and I took a course in practical engineering in Rutgers College."

Kinkade's first job was with the Crane Motor Car Company of Bayonne, New Jersey. This was in September, 1909, when he was sixteen years old.

A little later the Crane Motor Car Company consolidated with the Simplex Automobile Company, at New Brunswick, New Jersey. At the outbreak of the World War in 1914, this company received a contract from the French Government for Hispaño-Suiza aviation engines.

"This started the company, and with it my own activity, in aviation motors," said Kinkade.

It all sounded so simple, as if the untrained boy just naturally drifted into a kind of work that required utmost precision and great mechanical experience, that I was curious about what went on with him between 1909 and 1914.

"Simple enough. I began by sweeping the floor. After a while, I put away the broom for cleaning that required machinery—such as cranes which hoisted metal scraps after hours. I went through the machine shop slowly, having a job at a lathe for a few months, then at a drill, and again at a scraper or milling machine, and so on. In about three years I learned pretty much how to run every manufacturing machine in the place.

"I was promoted to inspector, and got along well enough finally to be made chief inspector. From this job I graduated into field service engineer, which took me outside the factory for work on our finished product. This was my first taste of the true excitement of mechanical production."

THE job in aviation motors for the French Government left its mark on the company. During the war, when the American Government got into the business of turning out aircraft, Kinkade's company changed its name to the Wright-Martin Aircraft Corporation. Just after the war it was reorganized into the Wright Aëronautical Corporation, now famous for its "Whirlwind" motors.

"During all these years," said Kinkade, "I never left the firm. In the war my time was spent giving instruction in the care and operation of the Hisso motors to army and navy officers. Also, I assisted in the experimental aircraft works at the various fields where I was stationed."

Putting it another way, Kinkade literally lived with airplane motors and their mechanical appurtenances, day in and day out, for seventeen years. No wonder he learned some of the idiosyncrasies of the gas engine.

Of course, as soon as Kinkade's unique ability to put an engine in shape for a hard test was realized, his services were in great demand.

Probably the first big responsibility he

Both the Motor World and Aviation have followed Franklin's pioneering

TWENTY-SIX years ago—courageously and independently—Franklin pioneered air-cooling—the most efficient and dependable cooling principle for automobile engines . . . Today, modern Aviation has virtually standardized on air-cooled motors for long, hazardous flights—for sustained high speed, regardless of altitude or weather conditions.

Such an endorsement of a Franklin engineering principle is by no means unusual. With equal vision, Franklin pioneered the first four-cylinder motor, the first six-cylinder motor, the first valve-in-head cylinder, the first sedan body. Franklin introduced the high hood, narrow radiator shell, panelled grille and modified cubistic body lines—now apparent in fully half of the smartest new cars.

The introduction of the Airman Series gave the motor world a new standard of speed—higher average speed throughout a day's run—and a new standard of riding comfort—the Airman has been widely acclaimed "the most comfortable mile-a-minute car ever built."

And now Franklin offers the first *light-weight,* 7-passenger models—ideal family cars; spacious without being bulky; handled and controlled with runabout ease.

You will want to acquaint yourself with the automobile's nearest approach to flying. Just telephone the Franklin representative and an Airman will be placed at your disposal . . . Term payments are offered.

FRANKLIN AUTOMOBILE COMPANY, SYRACUSE

The Franklin Sedan weighs 10% to 20% less than other sedans of equal size—10% to 20% less weight to handle—to move about—to use up gasoline and tires.

Airman Series FRANKLIN

carried along these lines was his work in connection with the early Pulitzer races. There, for the first time, he carried heavily that rather gruesome burden which is his alone: to adjust a plane's engine, knowing that the slightest mistake on his part, a hair's breadth out of line in valve or bearing, is likely to be the direct cause of the pilot's death.

"And if you knew what good fellows these kids are, and how fond I get of them," he said to me, "you'd understand how I suffer at such times. I suppose it's a good deal like a surgeon operating on his own child."

The Wright Company assigned him to the 1919 Pulitzer race which was held in New York. This contest was primarily for speed. The idea was to build the smallest plane that would stay up, cram her full of engine power, and then open her full up. If she hung together and the motor kept going she usually broke a record. Colonel Hartney's plane, which Kinkade put into shape, exceeded the world's speed figure and came out without accident.

Two years later Kinkade took care of Lieutenant "Red" Macready's entry in the Omaha Pulitzer race. This time his entry came in second place, breaking a record, but not quite able to equal the high figure set by another engine. But the important thing to humanity and to aviation was that Macready is still flying, making valuable investigations of the upper air.

In the thrilling Detroit races of 1922 Kinkade nursed the Hisso motors in three Verville Sperry racers. Every one of the three finished.

Kinkade said, smiling, "*So far I have never worked on a plane for a race in which it did not finish.*"

No wonder he is popular with the pilots who risk their lives in the interest of aviation.

IN 1926 began Kinkade's connection with the remarkable series of air expeditions of the past few years. On April 12th he joined me on the "Chantier," bound for Spitzbergen, where we were to make our attempt to fly across the North Pole.

I had not known Kinkade very well up to this time. Of course I was familiar with his reputation for being one of the best engine men we had in America. But I had never been real shipmates with him before. I confess I was in some doubt as to how he would turn out. So many men with reputations are just temperamental enough to spoil them for the confinement and hardship entailed in an expedition far from the environment in which they are accustomed to work.

A few mornings after we left New York I met Kinkade on deck. He had not said much about my engines.

"Think things are going to be all right?" I asked him.

He looked squarely into my eyes, as if wondering what I was driving at.

"How do you mean?" he said quietly.

"The engines. Are they going to work?"

What I wanted, of course, was for him to talk a little bit about them.

He smiled. "I think so," was all he said.

But the way he said it compared

"All the day through"

YOU'LL always find P.A. and me together, following the sun around. But we differ from the fellow in the song. We're *never* blue! No, *Sir!* P.A. and I joined hands when linen dusters were standard equipment for the Sunday drive. I'm still broadcasting my prescription for pipe-joy.

I like to lift the hatch on a tidy red tin and treat my detector to that Prince Albert aroma. Then I light up. . . . Cool as the click of a taxi-meter. Sweet as the words: "This ride's on *me*." Mild and long-burning, with a rich, full-bodied flavor that's just great!

From the first pull after the bacon-and-coffee till the house-slipper kick-off at the end of the day, P.A. hands me plenty of silver-lined smoke-clouds. No matter what your present program, pour some of the National Joy Smoke into your pipe. Then you'll know I'm not just talking words.

This tin contains TWO full ounces of jimmy-pipe joy.

PRINCE ALBERT

These photographs of paint surfaces were made through a powerful microscope. The astonishing contrast shows why Barreled Sunlight is so easy to keep clean. Smooth, unbroken and non-porous, it resists dirt and washes like tile.

Ordinary Flat Finish White Paint — Barreled Sunlight Gloss Finish

Beauty

UNMARRED BY DIRT!

for dirt can't embed itself in this paint enamel

MOTOR TRAFFIC — oil furnaces — trains — factories — all broadcasting clouds of fine, sticky dust that filters indoors everywhere. You can't escape it!

But you can prevent it from permanently soiling your walls and woodwork.

No matter how much dirt settles on a surface painted with Barreled Sunlight, the clean beauty of this paint enamel can be quickly restored. Washable as tile—because it's so satin-smooth dirt can't hold on!

A richly handsome enamel finish with a "depth" peculiar to itself. Easy to apply. Remarkably opaque. *Guaranteed to remain white longest.*

Barreled Sunlight is easy to tint with oil colors—to match any scheme of interior decoration. Quantities of 5 gallons or more are tinted to order at the factory, without extra charge.

Gloss, Semi-Gloss and Flat finishes. All sized cans and drums. For priming, use Barreled Sunlight Undercoat. See coupon.

For fine exterior painting, ask your dealer about the new Outside Barreled Sunlight—fully equal to its famous companion product in whiteness, "hiding power," and smooth beauty.

U. S. Gutta Percha Paint Co., 33-C Dudley Street, Providence, R. I. Branches: New York—Chicago—Philadelphia—San Francisco. Distributors in all principal cities. Retailed by more than 7000 dealers.

Dealers carry handy tubes of Barreled Sunlight Tinting Colors for tinting small quantities of Barreled Sunlight.

favorably with the calm assurance of a lion tamer on being questioned about the performance of the wild animals under his control. I can imagine the tamer, a quiet, grim, powerful man, speaking just the way Kinkade spoke, meaning, "*They know they'd better work when I'm around!*"

The story of our take-off in Spitzbergen is an old one now. We were forced to carry our plane ashore on a raft. Drifting snow and low temperatures made assembly on the vast snow slope inshore painfully difficult and slow. As the midnight sun was already up, we had daylight for twenty-four hours. This gave us no excuse for taking any rest.

Kinkade did not get orders from me when we arrived at that frontier post of the frozen north. When we dropped anchor in the icy bay, he hiked himself into the hold where our engines were stowed. From that moment, until we hopped off for the Pole, twelve days later, I do not think he left the vicinity of those engines any more than was absolutely necessary. Every one of the thousands of engine parts, every drop of the fuel, every oozing globule of the lubricating oil passed through his hands and Bennett's. It looked as if nothing in the world pleased him better than to have on his broad shoulders every iota of the responsibility for our getting to the Pole and back alive.

On May 9th, 1925, at 9:02 A. M., we circled over the North Pole. One of my regrets was that Kinkade was not there to hear the music of the motors.

HE OPENED his wonderful 1927 season with the most startling engine performances on record. He prepared the engine used by Chamberlin and Acosta in their Bellanca plane, which they flew for 50 hours and 14 minutes over Long Island, breaking the world's figure for endurance.

To the pilot, this is one of Kinkade's greatest achievements. It is no longer difficult to guide a plane. Designers and builders know pretty definitely what stresses wings must stand, and how to meet them. Fire and fog, wind, and heat or cold, are factors of relatively secondary importance in flying safety.

Far and away, the most important item, indeed the basically vital item in safe flying, is the engine. *So long as the engine runs the plane is safe*, has become an axiom of aëronautics.

When, by his care of their engine, Kinkade made it possible for Acosta and Chamberlin to stay in the air longer than any other flyers up to that time had ever done, he contributed enormously to flying safety. The courageous pilots, the ingenious designers of plane and engine—Bellanca and Charles L. Lawrance deserve their share of praise for the accomplishment: we must not forget them. But it was Doc Kinkade who did those indefinable, delicate, and *vital* things to the plane's heart, its engine, when he attended to final inspection and adjustment.

The next step in his 1927 campaign was care of my three Whirlwind motors in the plane "America" which Mr. Wanamaker had built for my flight across the Atlantic Ocean. At short notice, and with only routine preparation, Kinkade saw that these motors were installed and made ready for flight during the last week in

Cleaning *that tires you not at all...*

POSITIVE AGITATION

ARE you one of the many women who never dare accept an invitation for the afternoon of cleaning day—whose strength is just enough for cleaning tasks—and no more?

The difficulty is not with you. Lighten your cleaning and you will find yourself with zest enough for outings *every* cleaning day.

The Hoover will give you this effortless cleaning. It removes more *dirt per minute* than any other cleaner. That means faster cleaning, easier cleaning, more thorough cleaning.

The Hoover is able to give you this faster, easier, deeper cleaning because of "Positive Agitation," a cleaning principle exclusive with products of The Hoover Company.

"Positive Agitation" vibrates all the deep-buried, destructive grit to the surface. With this unmatchable deep-beating are combined sweeping and suction, giving The Hoover an efficiency that begins where the ordinary vacuum cleaner leaves off. "Positive Agitation," too, restores the original beauty to rugs, by its lifting of the nap and brightening of the colors.

The ability of The Hoover to remove more *dirt per minute* has been shown by repeated tests made under actual home conditions. We shall be glad to prove it to you on your own rugs. Because of the Hoover's outstanding superiority, you should be sure to see this test, before purchasing *any* cleaner. Telephone your Authorized Hoover Dealer.

Cash prices: Model 700, $75. Model 543, $59.50. Dusting tools, $12.50. New . . . motor-driven floor polishing attachment, $7.50. Easy payments if desired. Only $6.25 down. Prices slightly higher west of the Rockies and in Canada. Hoover dealers will make you an allowance on your old machine.

THE HOOVER COMPANY, NORTH CANTON, OHIO
The oldest and largest maker of electric cleaners
The Hoover is also made in Canada, at Hamilton, Ontario

Your own pictures-on your own screen-at trifling expense

NOT movies, but an unlimited volume of inexpensive, entertaining pictures for home projection are yours with the Ansco Memo Camera.

This smart, modern camera and any still-film projector enable you to reproduce on the screen anything and everything you can photograph.

Family, friends, or business associates can enjoy that trip, share that vacation. You can have liberal photographic records of everything, and at insignificant cost.

Memo Camera pictures are ideal for notebook or enlargement. You can make 50 exposures on one 50c film. Prints cost about 1c, positives (for projection) 2c per picture.

Probably just the kind of picture-taking convenience you've been wanting, without knowing where to look. Learn more about the Memo—at your dealer's, or write for free 48-page book.

Projector illustrated is the Ansco Memoscope. Price, with case, $19.50

April. We should have easily got up then and made our crossing, except for an unfortunate accident: The plane proved to be nose-heavy on her trial flight. While piloted by Mr. Fokker, her builder, she nosed over on landing and smashed her cockpit.

This put a nice little problem in mechanics up to Kinkade. It was his job to decide whether the engines were badly enough damaged by the crash to necessitate installing new engines. He was the one who had to be a party not only to our getting safely across the ocean but to our being delayed by additional work on the plane.

We were delayed. The engines had to be dismounted while the nose of the plane was being rebuilt. But Doc was not allowed to rest. Two other planes were grooming for the transatlantic flight—that of Chamberlin and that of Lindbergh.

SO KINKADE was rushed to Curtiss Field, where he worked feverishly to get the other two entries into shape. Meanwhile, the public became more and more intensely interested in who should be the first man to fly to Paris. The largest factor in the competition, if such there was, surely was the engine factor. And all three planes had Whirlwind engines, pet of the man I am talking about, and each Whirlwind depended on Doc Kinkade to put it into shape for a long flight.

Doc asked me to modify that particular statement. "Give the other boys the credit due them," he said. "I wasn't the only one that had anything to do with Lindbergh's plane. There were also Edward Mulling and Kenneth Boedecker."

It is characteristic of the man that he tries to slip out of the picture as much as possible. Nothing makes him more miserable than to get praise that should be shared with others.

Nevertheless, I want to go on record that one of the great factors in the success of the transatlantic flights last summer was a combination of Doc Kinkade and the Whirlwind engine.

That's why I deem it so unfair not to give the highest sort of praise and regard to this man.

But Doc's job wasn't over when we had all hopped for the other side. As usual, Doc rushed home, grabbed a suit case and a sandwich, kissed his wife good-by and caught the first ship for Cherbourg.

"I'd like to have stowed away on the 'America' when you left," he told me. "In fact, just before you hopped off, I crawled into the plane and had a look around. I knew that I could hide in there so I wouldn't be seen. But when I saw that you were giving up a few ounces of precious food, just to make her a little lighter, I knew I couldn't hurt your chances by adding my carcass."

With no farewell address, with no pomp or ceremony, not even a crowd of eager journalists to interview him, Doc rushed aboard the liner that was to take him to the other end of the race which was truly his more than any other single man's. I think that in a big way Doc was at that moment pretty much like the boy who has set his toy ships sailing across a pond, and dashes around to the other side to see if they have all safely landed.

"I was afraid my vacation would be a total 'flop'"

Seattle, Wash.

"There are so many things doing at college, one hates to miss any of them. But I overdid it. Too many parties, added to studies, ended in my having to go to bed for a week—completely run down.

"In 1918, when all the young men were going into the service, my father had to devote unusually long hours to his business. His snatches of sleep were so short that he became badly run down and broke out with boils. His doctor recommended Fleischmann's Yeast. It not only rid him of the boils but restored him to excellent health—so he is a confirmed believer and soon had me eating Yeast, too.

"In a short time I was much better and in two months I was *well.* This spring, however, just before school closed, my skin broke out with pimples. How I hated them! I was afraid if I didn't get rid of them my vacation would be a total 'flop.'

"I was again reminded of Yeast, however—and again it was successful. I haven't a sign of a pimple, now—and my health is fine." CORA B. HANSON

(*Above*) MISS CORA HANSON, *of Seattle*
Read her story at left

WHEN your stomach begins to "act up," when skin blemishes appear—don't rely on weakening, habit-forming drugs, doctors say.

Fresh as any vegetable, Fleischmann's Yeast is a natural health *food.* It tones up sluggish colon muscles and softens accumulated food wastes—hastening elimination, making it more *complete.* Soon—your appetite revives, your complexion clears. Your whole being responds with new-found energy and health!

Buy two or three days' supply at a time from your grocer and keep in any cool, dry place. Write for latest booklet on Yeast in the diet—free. Health Research Dept. J-53, The Fleischmann Company, 701 Washington St., New York.

New York City

"RETURNING from a tour of Africa and Australia, I found that I had contracted stomach trouble. Thinking it would wear off, I started east on a well-known vaudeville circuit. But instead of getting better, my trouble rapidly became acute. At Omaha I decided I would have to cancel the rest of my route. A fellow performer, however, suggested Yeast. Said I, 'I'll try it,' and that night I began. Every day I ate several cakes. Well, I was able to go right on with my act, thanks to Fleischmann's Yeast, doing three strenuous dancing shows daily. In a short time I was in first-class shape."
STANLEY CARVET

STANLEY CARVET, *New York City*

"*When I saw my first racing automobile I knew I wouldn't be happy until I had driven one myself,*" *writes Malcolm Clair. His letter follows:*

Hollywood, Calif.

"I HAVE RACED a good many cars, though not professionally. For many years this took the place of every other outdoor sport . . . My employment with a law firm was quite a contrast with my former spirited life. Two years at a desk—and I had become sluggish, run down, inclined to have headaches. Then I went on the road to investigate cases, and thought I would get better. But the hours were longer, and I frequently had practically to camp on a case to get needed information. This meant irregular meals. Soon I was constipated again . . . I learned about Fleischmann's Yeast from my mother, who had eaten it with good results. Three cakes a day restored my old-time pep and brought welcome relief from constipation." MALCOLM CLAIR

Radiant health, new joy in living—
this easy way:

Eat three cakes of Fleischmann's Yeast regularly every day, one cake before each meal or between meals: just plain, or dissolved in water (hot or cold) or any other way you like. For stubborn constipation physicians say to drink one cake in a glass of hot water—not scalding—before each meal and before going to bed.

TRADE **YALE** MARK

Supreme Symbols of Protection

Yale Pin-tumbler Drawer Lock. One of a complete line of trunk, drawer and cupboard locks.

Yale Lever-tumbler Padlock. There's a Yale Padlock for every purse and purpose.

Yale Door Closer — made in six sizes for all types of doors.

Yale Automatic Deadlatch. One of many Yale Deadlocks, Deadlatches and Springlatches.

Jackson Design Yale Builders' Hardware. Yale has many designs in various schools of art.

From modest cottage to massive building, and for every door, chest, closet and cabinet, Yale provides Locks, Hardware and Door Closers, each recognized for its inherent possession of Yale attributes.

Because Yale's facilities, personnel and experience are so vast in varied fields of accomplishment, each Yale product has back of it cumulative value that could not otherwise be available. Materials are purchased to Yale exacting standards and tested by Yale's own chemists and metallurgists. Careful inspection each step of the way insures perfection and precision, for no feature is too slight for strict adherence to Yale's rigid specifications.

When you purchase Hardware, Locks, Door Closers, Chain Blocks, Hoists and Electric Industrial Trucks marked Yale, you know that from start to finish everything humanly and mechanically possible has been co-ordinated that Yale may serve you better. Men, methods and metals have combined to maintain Yale leadership.

The Yale & Towne Mfg. Co., Stamford, Conn., U. S. A.

Canadian Branch at St. Catharines, Ont.

YALE MARKED IS YALE MADE

Hardly had he got his engines straightened out in Europe than the Wright company wired him to hurry to Detroit and fix up the two men who were just starting on a flight around the world. This was the expedition of William S. Brock and Edward F. Schlee. They were off to London, thence down through Europe, Asia Minor and India, and up along the Asiatic coast.

SO MUCH terrific air work had been done by this time (August 28th) that the public was sated with air news. Relatively little attention was paid to the remarkable flight these two men made—all the way to Japan without a hitch. Their success was another feather in Kinkade's cap, which now figuratively began to look like the headdress of Sitting Bull. Said Doc simply:

"I took care of the engine that carried them to Japan, and later across the United States, going east. They changed only one spark plug on the entire trip!"

I wonder how many changes they would have made, or if they would have been alive to-day had anyone but Doc Kinkade taken care of their engine.

I asked Kinkade why he thought the particular engines he has worked on have done so well.

"Because the Wright company had made experiments of the most rigid sort for over two years before a single commercial motor was sold. In this way we knew what every part would do. It is most important, in any sort of airplane manufacturing, to win and maintain public confidence. Let one motor fail, and you wreck this confidence for months."

I asked him how he liked working on jobs such as last summer's, where the public is all steamed up.

"So long as they leave me alone I don't mind. After all, it is the pilot I am thinking of. I have never worked on a job yet where the pilot fell down. After being with these boys for a day or so, I have always been confident that they could carry through their flights. On every test, when I sit on the pilot's seat 'revving' up the motor I always feel that I am making the flight myself. Naturally when I O.K. the motor, it is because I have confidence that it will carry through.

"After seventeen years of true love for motors, and dreaming valves and main bearings every night of my life, then I have had the luck to draw down the very jobs that I like best of all. What a break for me!"

"QUIT AT SIXTY-FIVE?" says Henry Ford. "Why, I am only just beginning!—my toughest job, and real life's work, is still in front of me." Next month, in an extraordinarily interesting interview, the amazing Henry Ford expounds his philosophy of life, business, and ownership. What is this gigantic machine which Ford has set in motion going to do next? Is this country moving industrially toward higher wages, shorter hours, and intensive specialization? Read Ford's article, and see what he has to say on these and many other interesting subjects.

Called on him for 3 years Then, a $5000 order by Telephone

An Advertisement for Bell Long Distance Telephone Service

THE sales manager of a West Virginia tool company made personal calls upon a Cincinnati jobber for three years—without making a sale. Then one day he learned that a large job of work was to be started. He instantly called the jobber by Long Distance. Sold him a carload of shovels. Amount of the order, $5000. Telephone charge, $1.30.

In the packing industry, reams of correspondence are often exchanged before specifications can be agreed upon. In a 10-minute telephone conversation, an Austin, Minnesota, firm took a 5-carload order and laid the groundwork for future shipments of 500,000 pounds. The new customer was 1500 miles away.

A Cedar Rapids insurance man had learned to use Long Distance while in the coal business. Each week from his desk he calls an average of 20 of his salesmen. "It enables me to talk to them just as well as if I visited them in person." In five years, his annual business has increased from one million to five and a half million dollars.

What long distance calls could you profitably make now? They are inexpensive. New station to station day rates are: San Francisco to New York, $9. Pittsburgh to Boston, $2.20. Chicago to Detroit, $1.35. Newark to Philadelphia, 60c. . . . . Calling by number takes less time. . . . . *Number, please?*

The White Fireman's advice had gone unheeded

DURING an inspection, a White Fireman found the operating-levers which controlled a battery of stationary chemical fire-engines in this plant were attached to their shafts by set-screws, instead of being keyed on. This meant a possibility of the levers slipping on their shafts, preventing operating of the engines when called upon.

Furthermore, he found that a 16-inch water main within the plant, supplying water for practically all plant uses, including the yard-hydrants, was carried inside a building on brackets 20 feet above the floor—instead of being placed underground. This overhead water main was certain to break in case of the collapse of its supporting wall.

The White Fireman pointed out the necessity for rectifying these two errors, but the management deemed the faults too trivial for serious consideration.

Five months afterward, a fire attacked the plant. At the first move to start the nearest chemical engine, the operating-lever slipped on its shaft, rendering the engine useless; the next nearest engine proved too far away for its hose to reach the blaze.

By the time another hose could be brought in from the least distant yard-hydrant the fire had reached serious proportions.

As the fire got beyond immediate control, the roof and the wall that supported the water main soon collapsed. The rupture of this main at once put the power house out of commission and completely disabled the fire-hydrant system.

And so the fire burned on, because of the crippled condition of the plant's fire-apparatus, until it had wrought destruction to the amount of $800,000 before it was finally extinguished.

THE White Fireman symbolizes the Fire-Prevention Service maintained by insurance companies. This service includes: Consultation with architects and builders, that projected structures may have the least possible susceptibility to fire-damage ¶ the inspection of property, with recommendations for the elimination or reduction of existing fire-hazards ¶ the maintenance of the Underwriters' Laboratories for the testing of building materials, the practical trial of fire-extinguishers and other protective equipment, the examination of electrical apparatus and materials, for their fire-safety ¶ and, in addition, various other technical assistance to the furtherance of fire-prevention and property-conservation. . . . . .

The Strange and True Story of One Modern Girl

(*Continued from page 47*)

"When finally I was accepted by both Mr. Gest and Mr. Kahn, it was really a triumph for Reinhardt; because without his training I should have failed."

Up to this point, the story of Rosamond Pinchot is only a new version of the old fairy tale. So far as money and position were concerned, she was not the usual Cinderella accidentally discovered by the Prince. But so far as the *theatre* was concerned the analogy was perfect. There she was worse than merely humble. She was a rank outsider! Reinhardt brought her into that magic realm and gave her both fame and honor.

But here the fairy tale breaks off. After months of success in "The Miracle," the engagement ended. Reinhardt, meanwhile, had returned to Europe and was busy with his work over there. He did not need an American girl who spoke only a smattering of German; who, in fact, never had spoken *anything* on the stage.

For that matter, nowhere in the theatre did there seem to be any glittering opportunity for this girl. One swallow does not make a summer; and one success in pantomime does not make an actress. So Rosamond Pinchot found herself trying to answer the persistent inner question: "What next?"

Well, there was her deferred début. She could "come out" now; make her formal entrance into society, and enjoy the usual round of dinners and dances.

"BUT I didn't care for society!" she said to me. "I don't care for it now. I suppose I am what people call a 'modern girl.' And if I am at all typical, then the modern girl has two great desires.

"The two things I want are these: To live a life which expresses myself; and to feel that I am doing something which is a contribution to life as a whole.

"My engagement in 'The Miracle' encouraged me to think that I might accomplish something in the theatre. I loved the work, but I didn't exaggerate what I had done. I knew I needed study and training. So I answered the question 'What next?' by going to a dramatic school.

"Then, in the early summer of 1926, through a friend's influence, I was given my second opportunity; this time with a stock company in Rochester.

"I was still shy and inexperienced. I tried to play parts that were unsuited to me. I wasn't making good and I began to believe I *never* could do anything on the speaking stage.

"When the season ended, I was terribly discouraged. I didn't want to see anyone I knew, not even my family. I wanted to go off by myself and try to work out my problem alone.

"Years before, as a child, I had been with my father in California on our way to Hawaii. That part of the country fascinated me then and there had been a sort of glamour about it ever since.

"Does your favorite smoke go sour sometimes?"

Great After Smoking

"You smoke pretty steadily, Bill, don't you?"

"Yes, what makes you ask?"

"Well, because you always seem to enjoy it so thoroughly. But with me my pet smoke goes sour sometimes when I smoke that way."

"The answer is easy," the other man said. "Just eat a few Life Savers after smoking and see how much better each new smoke tastes!"

* * *

More and more smokers are doing the same thing. We wondered if you knew this about Life Savers, these little candy mints with the hole; how they freshen your mouth between smokes, soothe your nerves and make the next smoke so much better.

It's a fact; Life Savers easily double your smoke enjoyment. Their wonderful aromatic flavors freshen your mouth like a good drink of water when you're really thirsty—and steady your nerves for work or play. Once you try them this way between smokes you'll always have a package handy.

Six popular flavors: Pep-O-Mint, Wint-O-Green, Cinn-O-Mon, Lic-O-Rice, Cl-O-Ve, Vi-O-Let.

Eat a few Life Savers after smoking

P. S.
Have you tried LIFE SAVER FRUIT DROPS? Five refreshing flavors—Orange, Lemon, Lime, Anise and Grape. 5c a package.

Can this machine *read minds?*

Call any combination of numbers. Sundstrand automatically selects the right column for each figure

SING out to the Sundstrand operator, "One—three—seven." Her Sundstrand machine registers 1.37—but you meant thirteen-seventy. That's easy. A touch on the cipher key and Sundstrand registers 13.70.

She didn't have to do it all over. Sundstrand moved the decimal place and added the zero in the right column. That's called automatic column selection. It is as uncanny as mind-reading.

Now subtract twelve. With Sundstrand simply touch the subtract key and write 12. There's the answer—written out in full. No complements to figure—as speedy as addition—Sundstrand does it all.

Touch another key and Sundstrand multiplies by the easy automatic shift method. And for every operation, Sundstrand prints each step where you can see it instantly.

Yet, versatile as it is, Sundstrand has the simplest keyboard in the world. It carries only ten numeral keys. The touch system is natural to use. Speed is the result. Yet errors are few, because of its simplicity.

Prices range from $100 up. Don't be satisfied with machines that merely add. Ask for a Sundstrand demonstration before you buy.

Illustrated booklet on complete line of Sundstrand adding machines, bookkeeping machines and cash registers sent on request. Send coupon.

"I had a little money. Not very much, but enough to buy my ticket and to pay my expenses for a few weeks in San Francisco. I didn't even consult my family, for I was afraid they might object; and I simply had to try to find myself *by* myself.

"I realized that luck had been responsible for the opportunities I'd already had. I didn't know whether I could do anything without being helped.

"Even my name might keep me from being absolutely 'on my own.' It had been in all the newspapers of the country. People might recognize it, and be influenced by the fact that I was Rosamond Pinchot. So I changed my name. I'd rather not have you tell the one by which I was known out there.

"IT WAS the only time in my life that I have stood absolutely on my own feet; the only time I've ever been entirely unselfconscious. I don't want it spoiled.

"At first I tried to get work in a department store. But summer, as I soon learned, was the off-season for department stores.

"I began to learn a good many other things I never had thought of before. For instance, I studied the 'Help Wanted' columns in the local papers; and I discovered that, although summer was the slack season in dry goods it was the busy season in canned goods!

"The first job I landed was in a peach cannery, where I sorted the fruit after it had been cooked, and put it into the cans. I ate an incredible amount of it the first day," she laughed. "But by the second day, I was literally so 'fed up' with stewed peaches that they had no temptation for me.

"When the peach-canning season was over, I went to Fresno. There I worked at packing figs and raisin grapes. I never see one of these great clusters of raisins that I don't think of those hot autumn days, with their endless processions of tons and tons of grapes to be packed.

"I wouldn't give up that experience for anything in the world. For once, I was *nothing but myself*. So far as the people around me knew, I had no family, no former friends, and no money except what I earned.

"Altogether, I spent several months in the canneries and packing houses. I was free to be myself. This helped me to *know* myself; and also to know other people who were free as I was. It was wonderful.

"But of course I realized that it was only an interlude. I had proved that I could stand on my own feet—in more ways than one!—in a canning factory. But when the season in Fresno was over, the old question, 'What next?' had to be answered again.

"Somehow I had got the idea that I might make something of myself as a photographer; so I went down to Los Angeles and succeeded in landing a small job in one of the studios there.

"During the winter 'The Miracle' came to Los Angeles. Mr. Gest had reconsidered his decision not to take it out of New York, and it was being shown in the larger cities of the country.

"I used to go to the theatre, sit 'out front,' and cry bitterly because I wasn't in the play! All my love of the stage and my longing to act came back with renewed force.

"Later in the winter I received a cablegram from Reinhardt, asking me to play the Nun in Europe; so, in March of 1927, I went to Germany. During the spring, the production was shown in the chief cities of various countries. When the season ended, I had played the part of the Nun six hundred times, counting the American appearances.

"At that time, Reinhardt was preparing for the *Festspiel*, or gala season, to be held at Salzburg in the autumn. Among the productions was to be 'Midsummer Night's Dream'; and one evening, in a restaurant in Vienna, the company was discussing the question of who should have the rôle of Hippolyta.

"'Why couldn't Miss Pinchot take it?' someone said to Reinhardt.

"'Nonsense!' he exclaimed. 'She knows very little German; and what little she does know she speaks atrociously. She is without experience in a speaking part of *any* kind. It is impossible!'

"I had to admit that it did seem impossible. Nevertheless, I determined I was going to try.

"After studying the part I persuaded Reinhardt to let me speak it for him. But he said my German was still atrocious. He doubted if there was any hope of my overcoming this handicap; certainly not in the few months before the *Festspiel* was to begin.

"In spite of this, I kept working on it. After our season ended, I stayed in Vienna a month, had a German teacher, associated only with Germans, and refused to speak a word of English. I read only German books and papers. If I saw any Americans, I avoided them as I would the plague.

"Finally, I went to Salzburg, where the rest of the company was rehearsing. With the help of Doctor Hock, Reinhardt's assistant, I kept on studying and practicing my German, going through the part of Hippolyta over and over again, repeating each word hundreds of times.

"ONE day a member of the company, realizing how monotonous this must be, suggested that I learn the rôle of Helena just as a relief from the grind. So I began to study it; at first without any idea of ever doing it on the stage.

"After weeks and weeks of work, Reinhardt finally did give me the rôle of Hippolyta. But meanwhile I had heard that the company was to come to this country; and I became obsessed with the ambition to come with them, as the only American in the most famous of all European companies.

"I went even further than that. Hippolyta was a minor rôle. That of Helena was much more important. If the struggle to get the minor rôle had been such a strenuous one, there seemed little hope of winning a really good part, like Helena; but I determined to try.

"By this time, I had learned Helena's lines; and day after day I would ask Reinhardt to let me speak them for him. But he always put me off. He was 'too busy.' Perhaps 'day after tomorrow' he might have a spare half-hour.

"But the tomorrows, and the days after, came and went; and always he was 'too busy.'

"Finally, one morning, I had reached the same point of desperate determination

IRMA SWAN is one of the most promising young swimmers on Long Island. Her smile, too, is unique, for its brightness is due to Pepsodent.

A VICTORIOUS MATCH had just been played by Mr. George McCollum and his daughter Virginia at the time of this picture. That explains the smiles. Pepsodent explains their sparkling whiteness.

As Film Leaves Teeth

Smiles Grow Bright and Sparkling

Film, too, is a cause of serious tooth and gum disorders. Dental science urges a new way to combat it.

ORDINARY brushing can never give the gleaming white teeth you envy nor the healthy teeth and gums you long for. Only an effective film-removing dentifrice can do that, for it is film that keeps both from you.

Run your tongue across your teeth and you can feel that film; a slippery, viscous coating.

Film, present-day dental opinion has proved, is the source of "off-color" teeth and many of the common tooth and gum disorders.

Film clings to teeth, gets into crevices and stays. It is a fertile breeding place for germs by the millions.

Film is the basis of tartar. And tartar with germs is a prevalent cause of pyorrhea. It fosters, too, the quick-acting acids that cause decay.

Now on dental advice thousands are turning to the special film-removing dentifrice called Pepsodent. A tooth paste different in formula, theory and effect from any other known. Pepsodent, compounded for the specific purpose of removing film, first curdles film, then removes it in complete safety to the enamel.

Pepsodent, by unique properties, goes further and acts to firm the gums. It multiplies the alkalinity of saliva, thus neutralizes the acids of decay. It brightens teeth and whitens them as no way has ever done before.

Dentists, in 58 nations, urge you to cleanse teeth this way. Its twice daily use is the utmost known in home care.

Please try it free for 10 days. You will marvel at results. Send the coupon.

Products of QUALITY and Service!

which had made me *demand* an interview on the 'Aquitania.' Again I felt that my whole future was at stake.

"To you, it may seem a very simple matter that I called him up, at his castle just outside Salzburg, and told him that I *must* see him. But I assure you it was as if a humble subject should call up a royal palace and insist on seeing the king!

"Perhaps out of pity for me, perhaps because he thought he might as well get it over with, he agreed to see me.

"All my weeks and months of hard work were well worth while, when he told me that at last he was convinced I really had a place on the speaking stage. He agreed to let me do Helena in the rehearsals. And if I was satisfactory there, I should have the rôle in the American production. As you know, I did have it; which goes to prove that the word 'impossible' is not so final as it sounds.

"It is curious, but in my experience Opportunity seems to come through mere luck, or chance. But the only way I can seize it, and hold it, is by *plain hard work!*"

"I've never believed much in luck," I said to her. "How do you think it has helped you?"

"Chiefly by giving me marvelous unexpected chances," she replied. "But, aside from that, I've been fortunate in other ways. We are not 'millionaires.' Nevertheless, I've always had practically everything I wanted; in a material way, at any rate. I've had comfort and even luxury. Life was made easy and pleasant for me.

"I love the country; and at our home in Pennsylvania, where I could walk and ride and swim, I was intensely happy. There is a beautiful waterfall on our place. I always keep a photograph of it beside my dressing table at the theatre; and when I am blue, or discouraged, I look at that picture.

"Somehow, the thought of that waterfall, going on and on without interruption, helps me. In the first place, it will always be there; a bit of loveliness to which I can go back. But, even aside from that, it gives me a sense of the steady flow of life itself; the big unbroken current, in contrast with which the little turbulent streams of our individual lives seem so trivial.

"AS FOR luck," she went on, "I have also the immense good fortune of perfect health. And that, probably, is due to my 'luck' in having spent so many summers in the country.

"There I was out of doors all the time. I 'broke' my first pony when I was only ten years old. I never have had a serious illness. I scarcely know the meaning of the word 'headache.'

"If I hadn't been so lucky as to be perfectly well and strong, I couldn't have 'stood the gaff.' During the company's season in New York we often worked almost continuously for more than forty-eight hours, with only a little sleep.

"On Fridays and Saturdays we gave an afternoon and an evening performance each day. Both mornings, and each night after the play was over, we rehearsed for hours. On Sunday, rehearsals began in the morning and lasted most of the day. I was often tired, of course; but never *tired out.*"

Certainly she did not look "tired out" when I saw her in the play. Reinhardt is an enthusiast about motion. Whenever possible, his actors run instead of walking. And Rosamond Pinchot runs like a modern Diana, goddess of the chase. I wasn't surprised to find that at school she had been on the track team, with hurdles as her specialty.

Playing side by side with some of the most finished actors in the world, and speaking a strange language after only a few months' teaching, she won the success which had been called impossible.

The play was announced for only one week; but it was received so enthusiastically that the run had to be extended three times. Miss Pinchot was a radiant figure through it all, in spite of the months of hard work she had been putting in.

"WHAT is back of all this?" I asked. "Why are you doing it?"

"That's not an easy question to answer," she said, after a long pause. "To put the most obvious thing first, I want to earn my own living; and this is one way of doing it. I have a small income of my own, but not enough to enable me to live as I want to. And I don't intend to be dependent on others. So that's one reason.

"But the real reason is harder to explain. We spoke, a while ago, of 'the modern girl.' I *am* one; and I think I understand my own generation.

"What we want is *freedom*. When older people hear us talk about this, some of them laugh—and the rest seem to be scandalized! I can't see why.

"It is perfectly true that we, of the younger generation, often make mistakes in *using* the freedom we are so eager to have. But this doesn't prove that freedom is not a glorious possession. The only thing it proves is that one must learn to use it. And one has to make some mistakes in learning to use anything at all.

"To me, freedom means finding my own path in life; not one that is all laid out by other people and which I enter blindfolded, led by the hand! So many people seem to stumble through life that way. I want to go with my eyes open; to find for myself the thing I can and should do.

"By that, I don't mean just an occupation, or a career, I mean—"

She hesitated, hunting the right words.

"I mean," she went on, "that I want to find out how to live! I want to work. And, naturally, I prefer congenial and interesting work. But it seems to me that one can learn how to *live*, no matter what kind of *work* one is doing.

"When I went into the canning factories it wasn't because I wanted a 'career' in a cannery! But because I wanted other viewpoints of life; and because I wanted to see what I myself amounted to when I was stripped of all the 'trimmings' which I owed to my family, my environment, and my luck.

"Other girls, I think, are trying to do the same thing. They are trying to find out about life, and about themselves. This seems to me the whole secret of 'the modern girl.' And it also seems to me that it deserves to be taken seriously and understandingly, instead of being considered ridiculous—or worse."

Whole wheat as you never knew it could be! Cooked first. Then drawn to a filmy-thin, open-textured ribbon. Then wound round and round, layer upon layer, to a size and shape that just fit your cereal dish. Next, baked. And last, toasted butternut brown. What wonder Muffets are so light, so crisp, like potato chips, crumbling in your mouth!

What wonder they absorb and blend so perfectly with cream and sugar, with fruit juices of all kinds! Yet keep in any combination, their crunchy individuality, their suggestion of fresh pecans.

For health? Calories, body-building minerals, bran. Easy digestibility.

If you don't know your Muffets yet, promise them to yourself right now for tomorrow morning. The Quaker Oats Co., Chicago.

"They Are Not!"

(*Continued from page 15*)

punishment but we have made the things they are doing so commonplace that they have no shame in them.

If I could convince myself that these shocking immoralities of the youth of today never before existed; if I could be sure that these kids invented their wretched improprieties; if I were certain that their sins were indeed original, I would feel more uneasiness as to the final outcome. But, so far, my observation forces me to the conclusion that the flames of flaming youth are lighted at the home fires.

That these young rebels know what sets them going—I think is clear. They know that for every questionable thing which they flaunt so boldly in our faces, our generation is secretly hugging the like to its heart. And they are laughing at us and our "keep-it-dark" morality. They are shouting and jeering, "Aw, we know you! You ain't slipping anything over on us. Why don't you come out into the open? You haven't the nerve!"

We of this present generation have about reached the end of our rope. Most of us, deep in our hearts, know it. In spite of our pretenses and our efforts to save our faces, we no longer believe in ourselves. As our children have come to look with impudent, irreverent eyes upon our pretense of righteousness, they have sensed our cynical lack of faith in ourselves.

THE spirit of this rebellion of our young people is turning against the very conditions which we in our hearts abhor, but to which we still give ourselves, because we are powerless to do anything else. If our complaint were more honest, it would be not that these youngsters do what they do but that they do it so openly and without shame. In reality, it is their infernal rallying cry: "What the hell do we care!" that frightens us.

I do not wish to be understood as saying that this youthful revolt is a conscious rebellion. Not at all! These youngsters do not even know they are rebelling. They don't know what they are doing, nor why. They don't know where they are going, only that they are on their way.

Blindly, with no clear realization of what they are doing, this younger generation is smashing away at the "Keep it dark," "Don't get caught," "Anything that you can get away with is all right" policies of our ruling generation. That in their blindness they are smashing much that is good goes without saying. That they are hurting themselves is as true. But, just the same, the damnable policies of pretense and sham, of fake and bunk and bull, by which our generation is trying so disastrously to live, are being smashed.

I do not deny the stories of drinking, petting, wild parties, and all that, which are usually recited by those who discuss the youth of today. You can hear these stories in any club or lounging place where we oldsters gather and, to our shame, it is true that they are usually told with laughter. But for every sad tale of wasted youth, of young manhood wrecked and young womanhood ruined, there is a companion tragedy in the lives of the parents and older friends of these boys and girls.

For every case cited to prove the worthlessness of these rebellious youngsters, I will cite five cases to justify my contention that this new generation is at heart essentially sound. Never in the history of our educational institutions have we had so many young men and women working their way through college or universities, attending night schools, enrolling in university extension work, or taking correspondence courses, in order to fit themselves for the time when they will be called to stand their watch at the wheel.

After all, a country club is not the only place where one may observe this younger generation. Remember that not one young person out of five thousand enjoys country-club privileges. Go study the thousands of young people in schools, shops, factories, offices, stores—girls and boys who pay their own bills, and who never saw the veranda of a country clubhouse.

Certainly, there is a class of gay boys who do not earn the money that pays for their fun at a country or at a night club. When has the world ever been without such a class? But they are so small a minority against the great majority of earnest, hard-working, intelligent, competent young men, that they count for nothing except with their own kind. And, of course, there is the female of this species also. But the two dimples and one brain cell type is not a modern development, nor is it of much importance compared with the great multitude of girls who are earnestly fitting themselves for the responsibilities of matured womanhood.

You can't even make clothespins, cigar boxes, or wire nails without turning out a percentage of failures.

IN EVERY revolt, the ball is always opened by the extremists. It is the wild-eyed, rumple-haired shouters who start things, with their cries of death and destruction. In the beginning of the rebellion these hotheads lead the processions, do most of the shouting, and carry the torches. These go-the-limit ones have their day of leadership; and while it is their day all others in the movement must follow them. But sooner or later there comes another day. The frantic cheer-leaders wear both themselves and their excitable followers to rags. The shouting and the tumult dies; the novelty, the newness, the wild first excitement wanes. Then, the sane, thoughtful, cool-headed ones come to the front.

The most reassuring thing about this rebellious generation is the very large number of the rank and file who do not approve of the extremes to which their reckless go-the-limit leaders are just now going. But these more sane and level-headed rebels have not yet dared to voice

There's a Common-Sense

Price to Pay for Good Refrigeration

Gurney Royal — Porcelain Lined

Don't Buy a "Cheap Box"

Don't Pay for Useless Frills!

Quality construction is the first essential of good refrigeration. A few boards fitted together, highly varnished and equipped with shiny hardware don't make a real ice-box.

Fortunately, quality can be obtained without paying a high price. You buy efficient refrigeration and long service in the Gurney, but you are not required to pay for non-essentials which increase cost.

Go to your Gurney dealer and carefully inspect these well-known refrigerators. Wood or all-steel cabinets.

50 to 150 lbs. capacity.

How *experienced motorists* CUT TIRE EXPENSE

EXPERIENCED motorists are reducing their tire expense by following these simple suggestions:

FIRST: They see that a *genuine* Schrader Valve Inside, in good condition, is in every tire valve.

SECOND: They make sure they have an *improved* Schrader No. 880 Valve Cap screwed down tight by hand on every valve.

Should the valve inside become worn or damaged, this cap prevents escape of air at mouth of valve until a new inside can be inserted.

Always carry extra Schrader Valve Caps and Valve Insides in your car. Both are sold in red metal boxes of five at 25c a box.

Schrader products are sold by over 100,000 dealers throughout the world.

A. SCHRADER'S SON, Inc., BROOKLYN
Chicago Toronto London

TIRE VALVES—TIRE GAUGES

their protests. They follow their wild leaders, yes—because if they did not, they would be ostracized by their more excitable comrades. Many a girl who apparently takes a pull at her escort's flask merely touches the bottle with her lips.

And there are indications that the time for these cooler heads to come to the front is near. Already there are murmurings against "going the limit." Already "to go wild" is not always the thing to do. And when these sane, level-headed rebels do come to the front, and say boldly to their go-the-limit comrades, "*We will not!*" then we shall see the end of the fever period and feel the real spirit and force of this rebellion.

These sane ones will not give up their "freedom;" they will demand a larger freedom. They will free themselves from the leadership of these wild, irresponsible, go-the-limit rebels who just now are making all the noise and attracting all the attention. They will insist on their right to refuse a drink of hootch if they don't like it. They will not go back to the stork stories and the "keep-it-dark" age of their parents. They will still do what they do, in the open.

At the same time, they will no longer obey the mandates of the foolish freaks who, so far, have held the center of the picture.

THESE thinking, sound-at-the-heart youngsters who are all for their new freedom in so far as they are in revolt against the policies of our generation, and who, at the same time, are ready to stand against the go-the-limit element of this rebellion, upon these, I say, we may, with reason, fix our hopes.

In their clear-eyed contemplation of life, in their bold and consistent discussions of hitherto forbidden topics, in their matter-of-fact reasoning on vital subjects, in their intolerance of sham, in their bold refusal to keep anything dark, and in their refusal to be led without reason by the traditions of their parents, this rebellious generation has all the qualities which are needed to redeem civilization from the utter ruin toward which our generation is driving it.

The cost in characters ruined, health weakened, lives wasted, homes blighted, and in the mental, moral, and physical weaklings born of this go-the-limit period will be terrific—beyond reckoning.

These young people are taking the road to live in the open the lives that we, their parents, are living in secret. And, make no mistake, at the end of that road there is a Calvary. Many are going to be crucified for all this. Shame, hypocrisy, hidden vice, have always led to crucifixions, and always will. Our generation—we, the fathers and mothers of these rebellious ones—would do well to face, now, this truth: When these children *are* nailed to their crosses it will be *we* who stretch them there. For *our* sins they must suffer. It may be that from this Calvary also there will come a new light.

That our civilization has got beyond our control is evidenced on every hand. We are being swept no one knows where by a veritable flood of lawlessness, immorality, irreligion, and crime.

The present generation is powerless. Theoretically we are still in charge of affairs; actually, our affairs have taken charge of us. We still command the ship; yes—but the ship refuses to answer to the helm, and goes her own sweet way. As to the future, we are not in the picture. We cannot govern these Next Generationers, simply because we have reached the point where we cannot govern ourselves.

The saving thing about this rebellious generation is that they *are* rebelling. If they—the generation coming next into power—were to accept and continue the "keep-it-dark" standards of honesty, virtue, morality, and respectability by which we, in our time, have tried to live, then, indeed, would we be a people without hope.

All of which is to say that if this rebellious generation is saved, it must save itself.

Personally, I would rather trust the future to these young rebels than to rely upon my own generation, which has hashed everything from the religion of Jesus to the Eighteenth Amendment.

IN THE days of my youth I was privileged to listen to a fine, scholarly old gentleman—a Civil War veteran who knew Lincoln and Grant. He would look over his glasses at us boys, and, sadly shaking his silvery gray head, would say, "I'm mighty sorry for you young gentlemen. You were born too late. All the really interesting periods of history are past. It has all happened. It is all over. You young men have arrived on the scene too late." I wonder what the dear old boy would say now of automobiles, airships, radio, the World War, and a hundred other wonders which have happened since his death!

And so I am saying to my boy friends (looking over my glasses, and shaking my wise old head), "I envy you youngsters; the world is just swinging into the most interesting, exciting, and critical period of its history, and you lads have happened along in the very nick of time to land slap in the middle of it all. The changes you will make! The problems you will solve! The wars you will fight! The miracles you will work! We old fellows are out of it. We are going to die off pretty soon, and leave all the fun for you!"

The rivers still run to the sea. As their waters ran ten thousand years ago they run today, and will continue to run. Steamboats ply where once canoes were paddled, bridges span their rolling tides, cities grow on their banks, dams are built to bar their ways, and levees are raised to hold them in leash; but the waters still run to the sea.

Observing the stream of human life, one sees a quiet reach, and cries: "The river is standing still! There is no more progress—this is the end!" But it is not so. Another, gazing at an eddy shouts, "The water is moving the wrong way!"

The movement of this rebellious generation which we are just now viewing with such excitement is but an eddy in the stream. The waters have not, in reality, turned back on their appointed course. Look farther out into the stream to the great main, dominant current, and you will see that the river still runs toward the sea.

Pipe Smoker Lured By Aroma of Fellow Smoker's Tobacco

Many a man has flirted with the belle of a fancy dress ball, only to find, when the time came to unmask, that he had been attracted by his own wife. The same thing can happen in the case of a man's favorite smoking tobacco. In fact, it *has*. Read the following letter:

Boston, Mass.,
April 21, 1927

Larus & Bro. Co.,
Richmond, Va.

Gentlemen:

This morning I had a smoking adventure worth recording.

Next to me in the smoking car a gentleman was puffing his pipe contentedly. I was not smoking at the moment, and the aroma of his tobacco intrigued me exceedingly. For twelve years I had smoked Edgeworth without being tempted by any other brand, but the fragrance emanating from the pipe of the gentleman beside me was so agreeable that I could not resist the temptation to speak of it

"That is wonderfully fragrant tobacco you have there," I remarked. "Would you mind telling me the name of it?"

"It is Edgeworth," he answered.

We then congratulated each other upon our mutual good taste, and I decided that I would continue to use his brand and mine.

Sincerely yours,
S. H.

To those who have never tried Edgeworth, we make this offer:

Let us send you free samples of Edgeworth so that you may put it to the pipe test. If you like the samples, you'll like Edgeworth wherever and whenever you buy it, for it never changes in quality.

Write your name and address to Larus & Brother Company, 3 S. 21st Street, Richmond, Va.

Edgeworth is sold in various sizes to suit the needs and means of all purchasers. Both Edgeworth Plug Slice and Edgeworth Ready-Rubbed are packed in small, pocket-size packages, in handsome humidors holding a pound, and also in several handy in-between sizes.

[*On your radio—tune in on WRVA, Richmond, Va.—the Edgeworth Station. Wave length 254 Meters. Frequency 1180 kilocycles.*]

"They Are Hell Bent!"

(*Continued from page 13*)

recent débutantes. I had known him and his wife in the years when they lived happily and quietly with their family in a suburb of New York. Then he made a more than fair-sized fortune in a very few months.

Straightway, he and his wife were stricken with social aspirations for their daughters. Cash and personality and family connections allowed them to rise until they were fairly within the outer fringe of the heterogeneous tangle known as Society. The daughters were given a flying start therein. Yet the man was not as deliriously happy over the triumph as I expected to find him. Here, in brief, is the hard-luck yarn he spun to me:

"I'm worrying worse than ever I worried over business or anything else," said he. "My wife laughs at me, and tells me it is all right; because everyone does it. But—"

"Everyone does what?" I asked. "Worries?"

"No. Everyone does what my little girls are doing. But I seem to be about the only father who worries over it. They go to a dance, we'll say, these youngsters of mine. Their maid waits for them in the dressing-room. Along about one or two o'clock they send her home. Then they and a lot of other girls and a bunch of boys pile into cars or taxis, and start on a round of the night clubs. That keeps up till about six in the morning. Then the crowd stops at some all-night dairy restaurant for ham-and-eggs and coffee. Then they meander home at seven in the morning. That's what they call 'a large night.'

"Do you get the idea? A half-dozen boys and a half-dozen girls have been together all night long, without a chaperon and with nobody to 'ride herd' on them. They've been gargling punk night-club and hip-flask liquor, and they've been riding all jumbled up together, in the dark. And at country club dances a boy and girl don't sit out a dance on the stairs any more, as we used to. They chase for some closed car, out in the dark, and take a flask along. Close quarters, in a dark car, with booze. Nice thing for a father to picture his daughter doing. Isn't it?"

"WHY do you stand for it?" I asked. "Why?" he repeated. "Because the others are doing it; and my girls would be out of everything if I put a stop to all the things that are worrying me sick. I say *if* I put a stop to it; but that's a joke. I might as well say put a stop to Niagara. Kids aren't what *we* were. Parents are only necessary evils and filling stations for them now.

"My girls have told me of débutantes who have little apartments of their own in the same apartment houses where their parents live, so that there's no keeping tabs on what time they get home. That's a pretty well-established custom. And, to my mind, it's a rotten custom. Boys can call on them there, without having to be civil to the old folks. Yes, I'm worried. And there's no cure for my worry."

I could have told him that there was an immediate cure, in the shape of cutting off cash supplies and of moving away from town. But I didn't. It would involve a tearing down of the social fabric he and his wife had been so busy weaving, and a loss of their hard-gained and hard-held toe-grip on Society's ladder.

So, as in innumerable other instances of the kind, the precarious and worthless toe-grip is held, at a possible too-high cost of the very girls for whose sake the thing was done. A queer situation, isn't it?

I have known more than one similar situation in smaller communities—in the quasi-fashionable suburbs, where the fast set has an exaggerated estimate of the Devil's social position. Nor is it confined to any one stratum of society. It rakes high and middle and low alike.

Where a boy in his teens can wheedle money from his father for road-house or night-club toll, and can borrow his father's car as motive power for the party he is staging; where decent mothers permit their decent daughters to go on such parties, unchaperoned, and to come home at dawn without having to give account of the evening's proceedings—such antics *may* result in no great harm. On the other hand, they may result in incalculable harm; not only to the uncontrolled youngsters themselves but to the generation after next. Said a famed doctor with whom I talked:

"WE'RE not getting the full returns on this thing, yet; and we won't for another ten or fifteen years. I'm not speaking of the moral phase of it—though I could speak rather luridly on that, if professional ethics didn't muzzle me—but of the physical side of it. In other days, the average boy of twenty or under might get drunk at a college supper or take an occasional drink, but he was not a steady drinker, and the average young girl did not drink at all. Moreover, the liquor in that era was more or less pure and was carefully and scientifically made.

"Nowadays, boys and girls are drinking synthetic gin and green whisky that would put a professional drunkard's system into the discard. They're drinking steadily and deep; thousands of them. That poison is going to get into their kidneys and livers, and permeate their whole bodies.

"It may not show, just yet. The drinkers have youth and vigor to counterbalance it. But wait for another ten years, and then watch out for a dozen different chronic diseases to develop in the mothers of the future, to weaken the vitality of their children, and their children's children."

There is another and far graver angle to this situation which I can touch on only by inference.

I have talked with many Pollyannic parents who assure me, blithely:

"Oh, our young people aren't one atom the worse, morally, for this glorious New Freedom of theirs! There's just a jolly and honest goodfellowship between boys and girls, nowadays, that's really

The *best* gasolines become *better* when ETHYL is added

RACING car drivers *can't* take a chance with their engines.

Before a race they test their cars with the best gasoline obtainable. Then they add "Ethyl" fluid—the anti-knock compound—to develop the last ounce of power for speed and safety.

Similarly, leading oil companies are adding "Ethyl" fluid to the gasoline produced for the general motoring public, so that your car too may increase its performance under all driving conditions.

This fuel is called Ethyl Gasoline and is sold at pumps which display the emblem shown below.

Read the facts about Ethyl Gasoline given below. Remember that even the best gasolines become better when "Ethyl" fluid is added.

Then give Ethyl a trial. Its price is merely the price of good motor gasoline plus the few extra pennies the "Ethyl" ingredient costs. But what a difference it makes in your car!

ETHYL GASOLINE CORPORATION
25 Broadway, New York City 56 Church St., Toronto, Canada

What Ethyl Gasoline is

ETHYL GASOLINE was developed by General Motors Research to provide a more efficient fuel for internal combustion engines.

It is formed by adding Ethyl brand of anti-knock compound ("Ethyl" fluid) to selected motor gasoline in an amount sufficient to utilize the higher compression created by carbon deposits or advanced engine design.

"Ethyl" fluid is a concentrated liquid containing tetraethyl lead which has the property of controlling the combustion rate of gasoline. It is a patented product.

Only oil refining companies licensed to sell Ethyl Gasoline can mix "Ethyl" fluid with their gasoline. In every case the amount of "Ethyl" fluid must be sufficient to meet a definite standard of "anti-knock" quality rigidly controlled by the Ethyl Gasoline Corporation.

Ethyl Gasoline is colored red for identification. The color has nothing whatever to do with its performance. It takes more than dye to make "anti-knock" gasoline.

Ethyl Gasoline is sold only at pumps which display the "Ethyl" trademark.

Ethyl Gasoline is the yardstick by which other gasolines are measured.

ETHYL GASOLINE

ETHYL
BRAND OF
ANTI-KNOCK COMPOUND
ETHYL GASOLINE CORPORATION
NEW YORK, U.S.A.
Knocks out that knock

What Ethyl Gasoline does

If your car is designed to operate on ordinary gasoline, the use of Ethyl Gasoline will:

Eliminate "that knock" and power loss.

Make carbon deposits a source of extra power. For carbon increases compression and Ethyl Gasoline is the high compression fuel.

Give a smoother and better pulling engine, particularly on hills and heavy roads.

Reduce gear-shifting and increase acceleration, thereby making traffic driving easier.

Cut down vibration, thereby reducing engine wear and tear and depreciation.

Save you the expense of carbon removal and other repairs caused by "knocking" and carbon formation.

Give more power per gallon for your fuel bills—and more mileage as compression is increased by carbon deposits.

If your car is a high compression car, just remember that Ethyl Gasoline made it possible and its use is necessary to obtain maximum performance.

In short, Ethyl Gasoline increases the performance of any automobile engine—whatever its compression—whatever the climate or other driving conditions.

Rolling up new Sales and Mileage Records

EVERYWHERE, in the congestion of city traffic, in suburbs, in country—the demand for Silvertowns increases.

Thousands of new cars, equipped with Silvertowns, are pouring daily from the great automobile factories of America. And literally millions of motorists are following the preference of leading car manufacturers by demanding Silvertowns.

Even with the added capacity of the vast new Pacific Goodrich factory, Silvertown sales require the day and night operation of the huge plants at Akron and Kitchener, Ontario.

There is only one answer to these mounting sales. Economical—safe—dependable mileage. Goodrich dealers, east, west, north and south, are ready to equip you with Silvertowns!

THE B. F. GOODRICH RUBBER COMPANY, Akron, Ohio. *Est. 1870*
Pacific-Goodrich Rubber Company, Los Angeles, Calif. *In Canada:* Canadian-Goodrich Rubber Company, Kitchener, Ont.
LISTEN IN EVERY WEDNESDAY NIGHT, *Goodrich Radio Hour*
9:30 P. M. Eastern Standard Time over WEAF and the Red Network.

Goodrich Silvertowns

better and cleaner than all the prudish reticences of the former times. It's an improvement, all around."

Is it?

It seems to me that the blithe assurance of such parents savors just a little of the loud whistling wherewith a lonely small boy lightens his trip through a black alleyway. Again, I may be wrong.

Judge Ben Lindsey is a wise man. He has had practical experience with youth of both sexes. He is not foul-minded nor an alarmist. Read some of his appalling published statements—culled out of thousands—on the moral results of this New Freedom which discards the use of bridle and halter and yet which expects a hot-blooded young race-horse to stand tamely quiet and not to bolt.

Human nature remained basically the same for six thousand—perhaps six million years. The strict rules of chaperonage and of similar guards for youth, which were built up and strengthened during all those centuries, were not silly fetishes. The experience of ages proved them starkly needful. Yet Pollyannists ask us to believe that human nature has undergone such a radical change since 1918 that lad and lass can now be thrown together under circumstances of greater mutual license and mutual provocation than ever before were known, without resultant harm.

Liquor, propinquity, scantiness of attire, inexperienced and ardent youth, infinite opportunity, a breaking-down of all ancient barriers—that is the situation. Make out of it what you will—or, rather, what you must.

This goes hand in hand with the loud new talk about a "double standard" of morality—the prate which does not realize that a "double standard" usually means that both sexes are drawn *down* to the same low level, not elevated to a mutual higher plane. It is only in Hell's ledger that two wrongs make a right.

And so let's get on to a less unsavory view of the many-sided problem.

THIS New Freedom is epitomized best, I think, in a plaint made to me, two years ago, by a man much my senior. He was telling me of a nephew who had left his parents' Mid-Western home and, self-invited, had taken up his abode with my informant, in New York.

"I don't mind his living free on me," said the oldster. "I don't so much mind his touching me for spending-money every day or two. I can stand his stealing my liquor and helping himself to handfuls of my cigars. But I confess I got just a little sore when I happened to see the first paragraph of a letter he wrote home to his folks, last week. It said: '*I've never been so happy and so self-respecting in all my life as since I've been making my own way in the world.*'"

More often than not, that is precisely what it amounts to. The Next Generation is vaunting its New Freedom and Self-Expression at the expense of us old-timers who disapprove so bitterly of it all. We carry the key of the situation in our own pockets. We have but to cut off the cash supplies, and they will be brought to heel; even as we were brought to heel in the days when we were young.

How many boys of twenty-three and younger are earning enough salary at any

Digitized by Google Original from UNIVERSITY OF IOWA

job to pay for a single weekly evening at a night club? How many of them can pay for the repairs and gas and tires for the cars which have placed Opportunity so pleasantly within their grasp? How many girls of the same age can earn enough at decent jobs to pay their own bridge debts, to say nothing of paying for their clothes? Mighty few.

No, we groan and grouch and grumble. But we pay. And, by paying, we enable them to go on as we hate to see them going. We are a fine lot, we imbecile oldsters, aren't we?

There is still another doorway which the Next Generation is just beginning to peep through. "Peep" is the wrong word, for it implies furtiveness; and there is nothing furtive about the Next Generationers. Here is one illustration which epitomizes the whole:

A girl of twenty-one made her début three years ago. Since then, she has had a right jolly and wakeful time; though the Next Generation dubs her prudish and, but for her beauty and charm and cash, would have wall-flowered her. She told me, last spring:

"As soon as I get back from Europe, I am going to take a job. It's in a lawyer's office. The hours are from nine till five and I'm going to get a hundred dollars a month. Isn't that wonderful?"

I enthused properly at the grand prospect, omitting to remind her that whenever a wealthy girl takes such an unneeded position she is crowding out of it some girl to whom the salary would be a godsend. Then I asked:

"Why are you going to work? Are you bored?"

"No," she told me, with sudden serious eagerness. "But some day I shall be married. Then I may want to get a divorce, a few years after that. And when I'm divorced, I don't want to come back on my family for support, the way so many girls do. I want to know how to earn my own living, till I marry again. That's why I'm taking this job in Judge Blank's office. It'll be fine training."

In other words, before she has picked out a possible husband, she is paving the way cannily for a possible divorce and remarriage. If she were a solitary instance, her story would not have been worth telling. But she is not.

The easily swinging portals of divorce are robbing marriage of all grim permanence; for her and for many more like her. Water-wings are in waiting for those who may chance to tire of the long matrimonial swim. It is a gaudy spirit, isn't it, wherein to enter the erstwhile "for better, for worse" state of wedlock?

WHERE is the net profit in all this New Freedom tidal wave through which bewildered humanity is floundering breast-deep? Wherein are the Next Generationers themselves the gainers? Unbridled license never yet led to civic betterment or to individual happiness. (That is not a copybook maxim, but a tough fact in political economy.)

There is no hint of genuine liberty about it. When our Colonists freed America, they settled down to forming a government whereby their newly liberated land might best and most securely be ruled. They did not say:

"We were taxed heavily, and ruled

"Boy! How She Sparkles—
and think of the Saving, too!"

NEVER has a dollar bought more for any car-owner than KOZAK brings. A cleaner, brighter car—a $50 cut in your car-washing bills—a big saving in somebody's time and labor. Send in the coupon now and prove it for yourself. You run no risk—with our money-back guarantee! And seeing is believing!

KOZAK
Auto Dry Wash

is the modern way to dry wash your car—as tens of thousands of motorists already know. Not a drop of water is needed. KOZAK is a specially treated fabric. Keep it handy in your car. Spend a few moments each day on finish, windshield and nickel and see them glisten!

Automotive engineers will tell you that to-day's automobile finish needs exactly the kind of dry cleaning that KOZAK gives—to preserve and improve it. Only when the running gear is dirt-clogged do they prescribe a water-wash—for high pressure water-washing rusts joints and starts body squeaks. KOZAK's dry wash keeps your car new and smart-looking, stops noises developing and lengthens its efficient life.

At many times its low price, KOZAK would be cheap for the car-owner who prides himself on his car's appearance. Yet KOZAK costs but a dollar—and is ideal for every make of car.

Look for this convenient Silent Salesman at your dealer's. Every KOZAK is trade-marked on the fabric.

In the East, you can buy a KOZAK wherever you bought your car, or from the usual accessory stores. Elsewhere, preliminary distribution is now being extended through Ford dealers. KOZAK is $1—*postpaid* anywhere in the United States and Canada. If you have any trouble finding KOZAK locally, send us your check or cash for as many as you want. Use the coupon—Now!

To Dealers: You can buy KOZAK from any T. I. E. D. member or any A. E. A. jobber.

KOZAK, Batavia, N. Y.

MAIL THIS COUPON!

KOZAK, 7 Park Place, Batavia, N. Y.

Gentlemen:

I can hardly believe what you say about KOZAK. But I want to try it, with the understanding that if for any reason I find it unsatisfactory, the full price of $1 will be refunded to me without question. I enclose $..... (check or bills) for.....KOZAKS at $1 each.

..and now
DUNLOP
sponsors it..

MANY months ago, Dunlop started to build a 75c golf-ball.

Thousands upon thousands were made and sold. They were called "Maxpar." They were orphans. Dunlop withheld the Dunlop name—the greatest name in golf.

They had to win their own way in the world. They had to prove themselves to possess *all* the best qualities of *every* other 75c ball.

Thousands of golfers gave them untold punishment. Orders from professionals for this Spring's delivery are already in excess of manufacturing capacity. The Maxpar had conclusively earned its right to the Dunlop hall-mark.

So now it is the Dunlop "Maxpar." It is a *Dunlop*... in quality as well as name.

75¢
DUNLOP

MAXPAR

sternly by our former masters. Now that we have cast off their yoke, we'll have no taxes and no rule, but just be gorgeously free!"

Such a notion could not have lasted a year.

The Next Generationers are the supreme Bolshevists of the universe. Lawless, turbulent, breath-takingly free of lurid language, furiously or derisively resentful of efforts to check them, they demand all, and give little, setting Precedent and the Old Order at naught; smashing ancient custom and sneering at conventionality.

We oldsters are not perfect by any means; nor were our forefathers. Maybe we were inclined to be over-harsh, over-narrow, and tyrannical to our young. Maybe many details in our rule needed overthrowing. But customs and procedures of generations must not be ruthlessly swept aside, until something better can replace them.

When Genghis Khan conquered an Asian enemy country, one of his bigoted generals begged leave to smash all the images of gods in all the captured temples. Grimly answered Genghis Khan, the Wise:

"No. Not until we can supplant them with the images of better gods!"

Suppose, then, we find something practical and workable wherewith to supplant the solid customs of sixty centuries, before we let the Next Generationers rip to ribbons and crush to splinters everything that the combined experience and brain of The Ages has built up? It is worth a thought, perhaps even from the youth who insist on doing their own thinking and on junking the thoughts and ideals of those of us who have gone before.

HISTORY has little imagination. Once having coined a story, she tells it over and over again. Let's dip back into her dusty pages and see how she has dealt with Next Generationers, from the beginning of the World; or, to save time, for the past few hundred years, and in only one or two countries. For there is nothing new in the present situation—nor in anything else.

Back in England, in the mid-seventeenth century, Charles I ruled a corrupt and dissolute court. Next Generationers ran riot. Presently, revulsion and reaction set in. A puritanic iron age dawned, under Oliver Cromwell. Tiring of Cromwellian strictness and morals, England cut loose under Charles II in a career of court immorality and drunkenness and other vices which shamed the corrupt memory of Charles I's worst times.

England, sickening of this, thrust the Stuarts from the throne, and went strict again under William and Mary and under Queen Anne. Another swing or two of the pendulum and George IV and his Corinthians made the era of Charles II seem all but pure. On the heels of this orgy-time, Victoria mounted the throne, bringing back decency and a strict morality worthy of Cromwell.

The same thing has applied here in America, just as it has in every other nation. License has always been followed by puritanism, and, in turn, some upheaval has slung us back into license.

Just now we are paying the bill for the World War. We are paying it most heavily in the conduct of the Next Generationers. That can't and won't last forever.

BUT always the Pendulum has swung. Always it will swing. The next swing will bring back something, if not all, of the olden lost modesty and cleanness—if also the less desirable prudery and stiff conventionalities. See if I am not right. It will come within the lifetime of thousands of you who read this.

Meantime, there is always a bill to pay. Mrs. Nineteen-Forty will be grimly strict and prudish, perhaps. But she will have a less vigorous constitution than if she had not gulped down so much rank bootleg booze and smoked so many cigarettes in 1928. And when she chides her prim daughter for wishing to go unchaperoned to a dance, there may be hot unbidden memories—nauseous and shamed memories—of a dark and parked car and a flask; and of a man whose name she didn't catch when he was introduced to her, but who certainly was the Original Sheik.

One of the finest things about the human race is its innate tendency to right itself, soon or late, and to cast away the detrimental customs that hamper its rise. In nearly all new communities on the successive frontiers, lawlessness ran rife. But, presently, law-abiding decency took its place.

We are all living in a new frontier settlement made by the war and by its offshoots. The Next Generationers are having their heyday of license, to the harm of the community. But history ever repeats herself. We may look next for the eternally recurring era of law and order.

It will come. But—it is taking an unconscionably long time about it.

Dime Wise and Dollar Foolish

(*Continued from page 57*)

patriotic with on the Fourth of July. And the amount of intelligent economy I have put into rationing myself with firecrackers so they would last throughout the day, would run the steel trust.

We lived in a little Michigan town, where there was a saying that a hen never laid an egg that was worth more than a penny. Milk was four cents a quart—and the separator hadn't been invented. When milkmen raised their price to five cents a quart, it became a great public question, like the income tax. Beefsteak was ten cents a pound—any kind of steak. You didn't ask for a porterhouse or a sirloin. You asked for steak, and you got steak; and it cost you a dime. Somehow, those prices got themselves fixed in my head as standard.

We owned our own house, and it was as comfortable and pleasant as any in town. There were few people there who could be called rich, and most, to-day, would be considered rather less than well-to-do.

What Gift will recall this scene eventful years from now?

WHERE will her diploma be? Rolled away in a corner of the cedar chest.

And where will his fraternity pin be? Dropped . . . long since . . . into the jewelry case of the girl who became his wife.

What definite remembrance will this young man and this young womar still carry when, for instance, the class of 1948 come forward for *their* degrees?

If a Hamilton Watch accompanies the young graduate down from the platform, it will be looked at not once but a dozen times every single day.

Often it will recall this scene. Always the wearer will know—accurately, exactly, confidently—just what time it is.

There is a thrill in first possessing a Hamilton that the wearer never does quite get over. At first its accuracy seems nothing short of amazing. And then, as the years come and go, you grow to depend upon it as a friend who simply does not know how to tell you anything but the truth.

The Hamilton has justly earned its title, "the watch of railroad accuracy," not by chance, but because railroad regulations demand that trains be timed by watches of *known* accuracy. And so you will find that Hamiltons ride in the cab of the "Twentieth Century Limited," the "Broadway Limited," the "Olympian" and many other famous flyers of the rails.

Would you like to glance over an interesting booklet showing some of the beautiful new Hamilton models and telling a bit about the care with which they are made? Write for a free copy of "The Timekeeper." Hamilton Watch Company, 883 Columbia Avenue, Lancaster, Pa.

THE BRUNSWICK. In 14k green or white gold engraved, with dial shown, $112 to $172.

Upper. The OVAL. In filled or 14k gold; plain or engraved. $55 to $87.

Center. The TONNEAU. Filled or 14k. Plain or engraved from $55 to $87.

Lower. The SQUARE. Filled or 14k plain or engraved cases. $55 to $87.

Hamilton Wrist Models for women start at $48

"This is one time we've had an absolutely perfect trip. Wonderful weather, no breakdowns—not even a tire change."

"Yes, I'm glad now that I let that tire dealer talk me into putting Kelly-Springfields on all around. This is the first long trip we've ever taken without having to change at least one tire."

People saved, went to church Wednesdays and Sundays, and believed that hell was a pit of flaming brimstone and pitch. I think we were a typical small town of thirty-five or forty years ago, and I steeped in the atmosphere of it. For which I give thanks.

NOW, after all these years, I find my foundations there: my financial and my ethical foundations. The subconscious ones. When I have to spend more for a quart of milk than my parents did—it hurts my feelings. When I deal with anything which was familiar to me in those early days I feel I have violated something if I deal with it differently than it would have been treated. The result is a dual personality. I live two lives. One life is held in check by the experiences of the early days; the other life is made up of matters of which those early days were ignorant.

For instance, the possession of money in sums greater than, say, a hundred dollars a month, is a new one. It is a problem I have had to master for myself. I am independent of my past and can be as foolish as I like. But in dealing with sums which lay within the possibility of a hundred-dollar income, I am helplessly in the hands of my past.

Only a few days ago I went into a store to buy a small article which I have been accustomed to get for fifteen cents. The merchant demanded a quarter! I was outraged. I fumed and called upon heaven to behold the outrage. I have no doubt I waved my arms, and I know I gave an oration upon profiteers and the horrors of the cost of living. And I didn't buy.

But—that afternoon I went to New York to visit a musician friend of mine. He showed me a piano. It was a remarkable piano with gadgets and thing-um-bobs and what-nots. He also took me around and showed me other pianos without-do-hickeys, and which marketed at a fifth of the cost. First-class instruments, too, and good enough for anybody. But what did I do? Did I economize and buy a perfectly good piano that would have lasted for years and served any purpose—even the playing of musical compositions? No; I did not. I went and bought that other one with the whang-doodles on it. And I have never felt a qualm.

I kick like an army mule over the cook's wages, because we used to get a hired girl for two dollars and a half a week—and she did the washing!—and then I spend a silly amount of money for a yacht, and enjoy doing it. All because servant girls were known to my early experience and yachts were not.

If your experience has something with which to grapple, it will grapple with it in the good old-fashioned way. If the thing is new to your experience and established inhibitions, you will deal with it, I believe, according to your individual character. Experience can modify only what it has touched. It is useless for good or ill when it confronts a stranger.

Now, as to my business of writing. Why do I make it a business instead of elevating it to an art, and dealing with it temperamentally? I think I know: I was brought up under the banner inscribed with the motto about early to bed and

Speed ~ Luxury ~ Low Cost

A new-type motor brings the thrilling speed, comfort and reliability of America's finest runabouts

HAVE you longingly watched the smart, sleek runabouts that sail with motor car speed over cool, uncrowded, welcoming waterways? And wished that you might own one?

Such fine craft cost thousands. But now their joyful, capable performance is yours for a fraction of such costs.*

A new-type motor has made such miracles possible—

An *outboard* motor—but such a motor as the outboard world had never visioned.

Four cylinders—where "twin" cylinders had been considered the ultimate.

A torrent of power that can be likened only to the responsiveness of expensive inboard engines.

With such soft flexibility and obedient handling ease that even the novice can operate it confidently.

A motor that is vibrationless. A motor that is utterly, *unbelievably* free from vibration at every speed.

An amazing motor — product of the genius of Ole Evinrude.

On staunch, fleet hulls of family runabout type this Elto *Quad* gives a speed of 25 rollicking miles an hour. And with full passenger load, speeds of over twenty.

With security. No other motor offers a greater degree of steadfast reliability.

It snaps into exuberant life with a 2-inch flip of the flywheel. It reverses with a swing of the throttle, a touch of a button.

It has dual ignition, dual carburetion.

If there's young blood in the family, it's ready and eager to double in duty.

Transferring it from sporty runabout to fast racer is but the work of seconds — then, few motors indeed can hold pace with its 35-mile speed.

It is a true *all-purpose* motor. It is ideal power for small cabin cruisers.

You can own a *Quad*-powered boat for the first-cost of the cheapest motor car. Your running costs are almost nothing.

No boat house is necessary. Your boat can be beached wherever you wish. Your motor is detachable and portable.

If you've longed for the finest of outdoor sports—or if you've previously been content with an ordinary outboard—send for the Elto book—and for the name of a dealer who will gladly demonstrate.

The book gives full information on the *Quad*, and on two other famous Elto models. The *Speedster*, a splendid middleweight speed motor, and the *Service Twin*, an all-use family and utility motor.

Mail the convenient coupon.

*This is what we mean by *low cost*. The price of the Quad is $275.00. Many reliable builders offer fine runabout hulls adapted to Quad power for $200.00 to $450.00. Racing boats as low as $135.00. Cabin cruising boats as low as $450.00. Thus your boat complete — racer, fast runabout or cruiser — with Quad motor may cost as little as $410.00 and not more than $725.00 for the finest. If you wish a complete directory of boats and builders check the coupon.

THEY'RE REAL CLUBS
. . . . . when your caddy's proud of them . . . . .

IT TAKES more than just commonly good clubs to put a glint of pride in the eyes of your hard-boiled caddy. But VULCANS do it invariably. Everywhere—always—VULCAN Clubs of Character command that same enthusiasm. Beginner, seasoned golfer and Pro alike acclaim them. They're the sweetest playing clubs you've ever laid hands on—you know it the instant you *see* them. It's not a matter of appearance alone; you'll find in VULCANS that closer intimacy between club and player that you've always wished for but seldom experienced—a rare quality we call "Character."

The STAINLESS Set of eight matched irons. Modeled after famous Scotch hand-made irons.

To build clubs with this Character—to build as they knew golf clubs should be built, a group of the game's ablest craftsmen formed the VULCAN organization. Already responsible for the production of over five million fine clubs, their ideal was, from the outset, to build clubs finer than anything then known to the game—to create rather than manufacture.

A SET O' THREE Matched Woods, the V-21's—Driver, Brassie and Spoon. Finer and truer clubs have never been made.

To know how well they have realized their ideal you have only to see, to handle, a *VULCAN Stainless Set*, or a *Set O' Three* matched woods. Your dealer or Pro has them, or will gladly get them for you. Include his name when writing for the VULCAN catalog.

early to rise. The great truth that anything dealing with the making of one's daily bread was a serious matter is still a great truth to me. Men worked from sun-up to sun-down, and industry was one of the highest virtues. Industry for the sake of industry. We ran rather to set rules, and sharp distinctions. You were hard-working or you were lazy; you were good or you were bad.

It is only during the past few years that I have discovered leisure, and the value and delights of leisure. But I shall never find out how to utilize it as do those who to leisure are born. I do my best, but it is inadequate. I was born in an era and in a locality where leisure was almost as immoral as dishonesty, and every time I loaf for a day I have to rub liniment on my conscience.

Yet, with all this background of conservatism, I have always been a taker of chances, moral, mental, physical, and financial. But in this I am curiously niggardly. I play golf. My friends—some of them—like to play for considerable stakes. Five dollars a hole, or a ten-dollar Nassau. I can't do it. If I bet more than a dollar a hole or a dollar Nassau, the fun goes out of it and I am in a stew. Yet, on the same afternoon, I can call my broker and risk half of all I have managed to lay by in twenty years on a single stock. And without worrying much about it.

I remember a year or so ago, when disagreeable things were happening in the market, I went in for more than any sensible man should do. My broker warned me and argued with me; but my mind was made up.

"Well," I said to him, "all I can lose is money."

HOW, with my background and upbringing, could I take a chance like that, and how, with economy and respect for savings ingrained in myself, could I say that? What made me act so, and what made me speak so? For I meant it. Naturally, it would be no pleasure to me to lose a large sum of money; but it did not seem to me it would be a calamity. I wasn't showing off, nor trying to prove myself what is called a game sport; but I do think there was some vanity in it. I mean to say I thought I had figured out what the market was going to do, and was a bit vain of what I believed to be my clear thinking. And I wanted to demonstrate it. Small vanities account for a great deal of my behavior, and your behavior.

It is difficult to be vain over the big things in one's life. I cannot, for instance, experience any of the emotion of vanity over any of my books, because I know more about them than any reader or critic. The critic sees only what you have managed to achieve; I myself know what I tried to achieve, and how far short the finished work fell of that ambition.

It must be a wonderful thing to write a book and to feel that you have bestowed a great thing upon the world. But that fine, big vanity is not for me, so I have to fall back on the little ones.

Once I found an old red band coat with gorgeous gold braid all over it. It was a noble thing. When it was destroyed in a fire my heart was broken. For over a year from the day it came into my life, I wore it—not in society, you understand, but at work. Every morning when I went into my office and was all alone, I would put on that coat and wear it, and work like the dickens. I didn't want anybody to see me in it; I just wanted to wear it and to know the bully sensation of being gotten up like a Christmas tree. I think it did me good. I think the more harmlessly foolish things a man can do, the better off he is, and I can understand how Mark Twain gloried in that pure white suit of evening clothes.

I FIND that a good part of my behavior derives from dissatisfaction with something; it is a protest. It is a reaction from some unpleasant condition experienced in the past. I do things which were forbidden, or denied to me as a boy—not because I want to do them especially but just to show that I can do them. When I was a kid I had a bicycle, which I was not allowed to ride on Sunday. For a long time after I became independent of that sort of control I—figuratively—rode bicycles on the Sabbath just to make up for lost time. This sort of thing gives one a gorgeous feeling of getting away with something, and we all love to do that.

I was born and brought up in a narrow environment. It was one which did not make allowances. Black was black, and white was white, but there was no gray or mauve or tan. Why, then, am I so tolerant of the conduct of others—so long as it doesn't disturb me when I want to be comfortable? Is it because I am tolerant by nature? I do not think so. I believe I am exceptionally intolerant. I do believe this toleration is one thing I have earned by hard work and observation and a little thinking. And by some scrutiny of my own weaknesses. I have reached the conclusion that ethics is not an exact science, that there is no set formula defining morals, and that many acts may seem evil to-day and perhaps virtuous to-morrow—or at least negligible.

So I have reached the point where I can say that such and such an act is not for me; but if Jim wants to do it, why, that is his own business, and what of it? Unless, as I said a moment ago, it disturbs my comfort, or enjoyment, or sense of fitness.

For instance, drunkenness exasperates me to the fighting point. Not, I regret to say, because I regard over-indulgence—or any indulgence—in liquor as moral turpitude, but because a gentleman in his cups becomes a pest. I think, at the base of my aversion is a feeling that the human race is endowed with a certain amount of dignity. I don't mean pomposity, but common or garden dignity.

Which brings us to the subject of manners: I know I take a childish and perverse delight in certain violations of the code as set down in the Book of Decorum. Maybe there is some petty vanity in this, and a bit of showing off. I think possibly it is so. Somebody once said of Napoleon that he never had any table manners until he got to a position where he didn't need any. It may be I like to dazzle myself with pretending to be Napoleon.

But anything which savors of basic ill manners I cannot abide. It may be a little thing. It may be the use of an overbearing tone in addressing a waiter or an inferior. But once an acquaintance

A CHARMING house of common brick doesn't cost *half as much* as you think it does. For practically the cost of a frame house—you can have the same size house built of brick. It will look twice as expensive and eventually will be *worth twice as much.*

The cost of lumber is not the cost of building. The first time you paint, the difference in cost of frame and brick almost disappears. Each painting thereafter only adds to the original cost. So for the cost of a few cans of paint you can have a real brick house that will become more beautiful each year. Over and above the economy of common brick are the wide and wonderful varieties of beautiful architectural effects that can be had. Effects that only improve with age. Until you see how common brick lends itself to every style of architecture, you can have no conception of its real value.

LOOKS LIKE A $25,000 HOME

but see how much less it will cost!

"Homes of Lasting Charm" contains 120 illustrations of actually-lived-in common brick homes with complete floor plans. Send for it today. Note the other books offered in the coupon below.

violates that foundational code, and I am through with him for life. I have lost my taste for him.

Injustice is another matter that makes the hair rise on the back of my neck. I don't mean great injustices. I mean little things. Such things as come up in daily contact with people. If somebody who is close to me by ties of friendship or blood—or marriage—deals with me in a manner which seems unjust, then I am plunged into the depths.

THEN we come to the matter of embarrassment and camouflage mechanism. It accounts for a large part of my behavior. For instance, I was in a party of strangers the other night, one of whom, in a clumsy sort of way, kept referring constantly to my books and to me as a writing person. In the most favorable circumstances it embarrasses me almost to death to have a stranger—or indeed anyone publicly—pull the usual line of stuff. But these circumstances were far from favorable, and I felt myself becoming more and more embarrassed each minute, until it got to the point where I couldn't bear it a second longer. I just made a sudden break for my hat and coat, and went away from there and didn't go back.

This embarrassment, or self-doubt, this inferiority complex, is at the root of so many of our acts. We do so many things to escape from what seems to us a predicament, or to conceal our perturbation. We act that way because we are scared to death.

To draw a diagram of the causes which lead up to the simplest act would be a highly complex achievement. But I can set down what I believe to be the most important motivations in my own behavior.

First, the experience of my childhood in those years when we get most of our education, and when we are most impressionable. It is then that indelible impressions are made. What we are taught and what we observe from birth until we are ten or twelve remain with us forever.

Second, a lifelong effort to escape from certain inhibitions fettered upon us in those years—which we recognize to be unsound, but which we cannot wholly throw off.

Third, the experience of our mature years, including such reasoning as we may have managed to do upon this and that. And the constant struggle between what we have acquired by honest reason and what has been imposed upon us as right or wrong before we were capable of reasoning.

And fourth, that spark of individuality and originality which glows in the most commonplace of us. It is there, and it is active. It is that which really differentiates one man from every other man. It is our own personal and peculiar possession, touching with its light and shadow every experience, every ambition, every reaction; modifying all, coloring all. It is this which makes mankind a puzzle. You are different from me in some wonderful, unidentifiable manner. If you and I have precisely the same experience and training we may manifest certain similarities; but we will be, in the main, as different as any other two persons. Because you cannot dull the spark which is each individual's trade-mark.

TO ME it seems that this spark struck from the cosmic flint and falling into me at birth is my most important possession. I say important, and not valuable. It may be an incubus. It may work my ruin or it may lift me to heights. But it is always present.

In short, we must arrive at one conclusion and only one. None other is possible:

I behave as I do because I am myself. You couldn't act as I do, nor can I train myself to act as you do. There must always be a difference. Nor can I predict for you, or you for me. Whenever the individual spark takes charge, it acts independently of all but itself. You cannot make a rule by which to judge a thousand million of men and women, when each one of that thousand million has in him a mysterious thing which is different from the mysterious thing of every other member of the thousand millions.

Why do I do that? . . . Because I am I.

What Do You Hate Most to Pay Out Money For?

Prize Contest Announcement

EVERY one of us has said at some time or other, "Oh, how I hate spending money for so-and-so!" Clarence Budington Kelland, in the article you have just read, says he didn't mind spending several thousand dollars for a piano with lots of whang-doodles attached to it; but he kicks like a steer because he has to pay more than ten cents a pound for beefsteak. We all have such idiosyncrasies when it comes to spending. Some folks simply loathe parting with money to pay for shoes; others hate to pay out money for laundry, rent, the cook's wages, vegetables, a haircut, and so on, *ad infinitum*.

What is it you hate most to spend money on? There may be a number of things, but one particular object riles you more than anything else.

Tell us about it, and also tell us the reason why.

For the best letter of not more than four hundred words we offer the following prizes: $30, first prize; $20, second prize; $10, third prize. Competition closes June 20th. Winning letters will appear in the September issue.

Address "Money," Contest Editor, THE AMERICAN MAGAZINE, 250 Park Avenue, New York City.

Contributions to this contest, and any enclosures, cannot be returned, so you must make a copy of your contest letter and of any enclosures, if you want to preserve them. Manuscripts and inquiries not connected with the contest must be sent under separate cover to the Editor of THE AMERICAN MAGAZINE.

So there's double cause for rejoicing

Food experts say:

"This is an admirably balanced ration."

GRAPE-NUTS—that crisp, golden food made from wheat and malted barley—has been famous for years as a "health food." Dietitians have approved it. Doctors have recommended it. And millions of people have chosen it. Today, upon countless breakfast tables it appears—Grape-Nuts, served with milk or cream—"an admirably balanced ration."

And yet . . . *do* people eat it first and foremost for the "healthful nourishment it supplies?" Do *you?*...We doubt it! For whenever we "conduct an investigation"—whenever we ask folks *why* they eat Grape-Nuts—the answer most often given (overwhelmingly!) is this: "Because we *like* it!"

And that's human nature, of course. So there's double cause for rejoicing, when a truly healthful food is truly delicious. Think about that the next time you taste those crisp, enticing kernels, with their nut-like malt-sugar-tinged flavor! Think that this food you so enjoy eating gives your body so many vital elements. Proteins for muscle and body-building. Iron for the blood. Phosphorus for teeth and bones. Dextrins, maltose and other carbohydrates for heat and energy. And the essential vitamin-B, a builder of appetite.

Two other virtues, also, have helped to raise Grape-Nuts to its present position among modern foods. Its remarkable digestibility and its characteristic *crispness*—both due to the special long, slow baking process by which the food is prepared.

The crispness of Grape-Nuts makes dentists join with doctors in praising it. For almost alone among modern foods this food encourages thorough chewing. It tempts you to give to teeth and gums the *natural* exercise and stimulation they require for health and beauty. "If people will add to their daily diet," say the dentists, "some foods that must be chewed, *then* we may hope to prevent many mouth ills that the soft and refined foods of civilization have brought upon us!"

A million breakfasters say:

"We eat it because it tastes so good!"

For its crispness—for its nourishing qualities—and (most of all!) for its delicious flavor—put Grape-Nuts regularly on your breakfast table. Your grocer sells it, of course. And you will be interested in the following offer:

Free! Two servings of Grape-Nuts and your choice of four valuable booklets.

Post Health Products
Ok Best

Grape-Nuts is one of the Post Health Products, which include also Instant Postum, Postum Cereal, Post Toasties, Post's Bran Flakes and Post's Bran Chocolate.

What!

. . . Is There A *Painless* Way To Europe? . . .

Yes . . . via the Cunard Travel Club!

Do you too suffer from that common travelling complaint . . . however thrilling your trip or your income . . . a swift pain in the pocketbook!

We thought so . . . who doesn't!

But Cunard has discovered the perfect remedy for all wallet ailments . . .

The answer is . . . the Cunard Budget Plan . . . a gentle but persistent treatment . . . nothing more nor less than a weekly savings system . . . where by the time you've actually decided *where* you want to go and *when* . . . those little weekly payments have accumulated to the point that . . . no fooling . . . you actually can *go* somewhere . . . instead of just thinking about it!

And the Cunard Travel Club has other things to offer . . . dandy ideas about where to go, gotten up . . . if we do say so as shouldn't . . . by better men than you are (travelishly speaking) . . . experts who have been Everywhere.

And . . . vehement warning! . . . you are not in a set group . . . no one knows you are travelling on a "budget plan" . . . anymore than they know whether you pay on the moment, the week or the year for your new Lincoln.

Who cares anyway.

Send for booklet "The Cunard Budget Plan"

CUNARD TRAVEL CLUB

Suite 440

25 Broadway, New York City *or* Your Local Steamship Agent

P. S. . . You may still have all the benefits of the Cunard Travel Club literature and whatnot and pay spot cash for your trip . . . that is if you insist!

Dot Tries to Help "Poor Mattie Coates"

(*Continued from page 51*)

Phil grinned kind of sheepishly.

"Don't look so bad, does she?" He turned to Will confidentially.

"There wasn't any comfort doing anything around the big house," he said, "because I never did anything right. The old gentleman was always nagging at me: 'Have you oiled the mower? Can't you get in any closer to the corners? Look out for that stone!' You know how it is."

Phil looked down at their shiny new lawn mower, only a quarter paid for, I suppose, but their own.

"It seems to make all the difference in the world," he said thoughtfully, "when it's your own lawn mower you're oiling."

It was right then that it dawned on me that what had happened was a good thing. Not only for Mrs. Coates. It was going to be the best of all for Phil and Marice themselves.

But what I wondered was what Betty was going to do, left alone in the big house with two men to keep house for. Though, as it turned out, she didn't have two men to keep house for long. Tom took himself suddenly off to Verblen.

I think that really Will was partly responsible for this. Tom's little second-hand car had something the matter with it and he was tinkering with it, and Will strolled over to look on. They decided that the car'd have to have a new clutch, which costs like the mischief. In their talking about it, Will gathered that Mr. Coates hadn't thought well of the way Tom threw his salary around, and had suddenly taken to charging him board. It didn't leave Tom much margin, and without his mother to wangle money out of, a new clutch looked a long way off.

WILL asked Tom what he wanted to work in the music store for, anyway. Why didn't he get out and get a job that really paid something? Tom told Will that he'd had a chance to get into the Perry Truck and Tractor Company in Verblen.

Not that he'd get any more salary there at first; but he's wild about heavy machines, and he would have started right in demonstrating. They have the Perry agency for all this part of the state, and Mr. Vance, who owns the business, has the reputation of pushing the young men who work for him right up to something good, as soon as they're ready for it. It's not so easy to get in there, and Will asked Tom for cat's sake why he fooled around selling jazz records if he had a chance like that.

"Well," said Tom, "I'd have to live in Verblen, you see. The Perry hours are too long to go back and forth."

"Well, can't you live in Verblen?" Will asked.

Tom kind of hemmed and hawed around, and finally said that at the time he hadn't felt it would be right to leave his mother. Will was perfectly disgusted at the idea of any young man being tied to his mother's apron strings like that, and I guess he let Tom see it.

It must have sort of struck at Tom's pride, because the very next day he went over to see if any job at the Perry Company was still open, and when he found that one was, if he didn't resign from the music store and take it!

When he left, I couldn't help thinking that, beginning with Mrs. Coates going, that big house was like the song "Forty-nine Bottles a-Hanging on the Wall." Now there was just Betty and her father living in it. Which was certainly just as well, if it was up to Betty to do the housekeeping. For a girl of seventeen, she knew about the least about housekeeping of anybody I've ever seen in my life.

And she certainly didn't show any desire to learn. The only interest she took in housekeeping was in seeing how quick she could get it done.

And the way she twisted her father around her finger!

THEY closed up all that big house except their own bedrooms and the kitchen. They didn't even use the living-room or dining-room, just lived and ate out on the big side porch. And the way they ate! Marice was so shocked she had to blow off steam to me:

"Honestly, if she *is* my own sister, I never saw anybody so shiftless in my entire life. With Mother's lovely table linen, Betty is using paper doilies and paper napkins! And with a china closet full of beautiful dishes, they eat three meals a day off paper plates. I wouldn't have Mother know for worlds. It would just break her heart."

"Can't your father make Betty—" I began, but Marice answered before I'd finished:

"Father doesn't care. He's just a man, and you know how men are. If he has three square meals a day that's all he asks. And Betty just works him. She's out of that place and off to play tennis by nine o'clock every morning."

It really was shocking; but, as Marice said, what was there to do about it? I was ironing napkins a morning or so later, and wondering if it was my duty—on account of what I'd promised Mrs. Coates—to speak to Betty, when suddenly I looked down at the napkin I was ironing on a folded bath towel to bring out the monogram, and it occurred to me that it was a foolish way to be spending a perfectly gorgeous summer morning.

And the more I thought of it, the less I could make Betty's way seem as shocking as Marice thought it. After all, if a family is kept clean and well fed, that's about all they really need, and, while I wouldn't want to pass up the trimmings myself, I have to admit that they aren't exactly necessary, and that they aren't any fun if you're the kind who isn't interested in them.

And Betty was interested in something else. She's such a crack athlete, specially swimming and tennis, that Peggy Scoggins's married brother had landed her the job as athletic assistant in Peggy's college, and Betty had decided to cram up and see if she couldn't pass the entrance examination for this very fall.

Though they had all expected her to

stay a month longer, Mr. Coates got a wire that Mrs. Coates would be home the day before Labor Day.

Watching the three children getting ready to welcome their mother, I realized that they had never been really as callous as they had seemed. Betty opened up the part of the house she'd kept closed, and filled it with goldenrod and purple asters. Tom got off for the day, so that he'd be home, and had his little car washed and shined up within an inch of its life to meet her at the station. Marice had a dinner in her new little home that would have been a credit to a much older housekeeper.

MRS. COATES arrived on schedule, looking just as usual, maybe a little fattened up and tanned. She had the apprehensive look of any mother who's been away from the family some time. I fairly purred in anticipation of the happy surprise in store for her.

As though to make her homecoming dramatic as well as happy, the very next day came the Labor Day intra-county amateur tennis tournament, over at the Verblen Country Club, and Betty won it for Montrose. Will and I sat with the Coateses and Marice and Phil, so that we could share a little of their pride.

Betty was gorgeous beyond words. I certainly don't wonder she landed the college job. She looked like a young Viking or something, out there with the sun shining on her short yellow hair and her bare tan arms. And the way she played! Clean and swift and strong and sure! When she smashed that last ball down over the net and it bounded miles out of her opponent's reach, the Montrose side fairly went wild. Mr. Scoggins, who was sitting on the other side of me and who is usually dignified beyond words, was so excited that he threw his expensive Panama hat in the air.

As I turned to look at Betty's mother, I could feel my eyes full of tears of sheer joy. Here was a daughter any mother could be proud of!

But to my amazement, Mrs. Coates was looking anything but proud.

"Oh, my poor baby!" she kept saying.

I couldn't believe she meant Betty. But she did. I was so baffled I couldn't speak.

"Look at her dress!" Her mother wailed. "A machine-made piece of cotton trash she bought for two-ninety-eight. Every other girl playing has on either silk shirting or linen!"

"Well," I said, "silk shirting or linen didn't help 'em any when they tried to stop one of Betty's balls. I'll bet any player there would be glad to be inside her two-ninety-eight this minute."

But, someway, Mrs. Coates didn't seem to share my proud excitement. She just kept talking about how anxious she was to get at making Betty some decent clothes.

AND as the days went on, she didn't lose one shade of the worried look she'd had that day at the tournament. I couldn't understand it. I kept waiting for her to come to a happy realization of how well her children were turning out, and, as far as I could see, she wasn't coming to it. In fact, instead of being proud, she seemed to be worried most of the time.

When I'd see her out in the yard, one day she'd tell me how Tom wasn't getting the right kind of food in that Verblen boarding-house, and the next day, she'd be worrying over Betty's going so far to college. Suppose she should be taken sick, eight hundred miles from home. Or it would be Marice was working too hard; the child wasn't used to the responsibility of a house.

I did all I could to reassure her. But the more I said, the sadder she seemed to feel. I couldn't understand it. Mrs. Coates had never been the worrying kind before, and yet now there was no reassuring her. She seemed absolutely sure, that, no matter how it might look on the surface, not one of her children was really getting along well.

And it made her so terribly sad. When I'd point out how lucky Betty was to have got such a splendid job, what a good college it was, and how it would fit her for some fine place when she was through, Mrs. Coates would just sigh, and say, oh, yes, she supposed Betty didn't need Mother any more, now. Or it would be Tom or Marice. She supposed, she'd say mournfully, that there wasn't much use for Mother any more.

I was completely baffled, I couldn't understand it at all. Perhaps I never should have, if it hadn't been for Marice. But during those weeks while I'd been helping her get settled in her new place, Marice and I had got really fond of each other. And one day, she just spilled out to me. Her mother had been over at the bungalow all day putting up grape jelly for Marice, though Marice had found a new recipe and had been really crazy to try it herself. Her mother had gone back to the big house, tired out, but happier than she'd seemed since she got back.

"DON'T you see, Dot," Marice explained, "it's having all of us on our own—Mother just can't stand it. She's perfectly miserable without the three of us to plan for and worry over."

The second it was pointed out to me, I could see it, of course. That was exactly the trouble. And Mrs. Coates was doing the very best she could to get every one of the three back home for her to take care of. She began pulling all the wires she could to get Tom some good position back in Montrose. Or even one that wasn't so good. She'd find some way to make it up to him, she promised.

And when Tom found it out and stopped her, said he was due for a promotion the first of the year, and that he was crazy about his job and wouldn't give it up for anything, she was terribly bitter, talked about the Perry company as though it were a band of crooks that lured innocent young men away from home and ruined them.

When Betty left for college, she cried all night and spoke of Betty as though she had died, though she was actually coming home for Thanksgiving. After Betty'd gone, Mrs. Coates spent half her time at Marice's bungalow, doing things for the baby that Marice had been learning to like to do for herself, and begging Marice, day after day, to sublet the bungalow and come back home. She'd manage Phil and Papa's arguing, she promised passionately.

"Why, Will," I exclaimed one day, when the truth had at last sunk in, "Mrs.

Makers of the famous Mi Choice chocolates

The original "Stuff" confections—often imitated but never equalled

Coates is really selfish! It's a hard time for any mother when her children grow up and leave—I remember how lost Mother was at first, after Kathie and I had both gone, and Rosie Merton's mother and Mrs. Dunwoody—and Mrs. Coates just won't go through it. She's so determined to get her three back home, to keep them all children, depending on her and imposing on her, that she's perfectly willing to ruin every one of their futures in order to do it. And I don't care how that looks from the outside, *I* call it selfish."

Will agreed, but in the care-free tone of one who figures that it may be true, but it's not his funeral. I suppose that's the way I should have taken it too; but someway, I couldn't. I'd got so fond of every one of those Coates children that I felt I just couldn't stand by and see their lives ruined. And by their own mother, of all people!

BUT what could I do? Day by day, that fall, I watched them weakening. Their mother got thinner and thinner, and sadder and sadder. She talked about children being ungrateful; you wear your fingers to the bone working for them while they're little, and when they grow up they're through with you. You're kicked off, like an old shoe. Well, she'd finish sadly, she probably didn't have many more years anyway.

And the Coates children couldn't stand it. Tom would go back to Verblen Sunday nights after having been home over the week-end, looking as though he'd been out all night. Marice told me that Betty had about decided not to go back to college next year, Mother wrote her such blue letters. But it was the hardest of all on Marice.

She is the tenderest-hearted little thing, and she was just torn two ways. Phil wouldn't hear of their giving up the bungalow; he'd just got the furniture paid for, and he wanted to start buying the house, so much a month.

"Why, Dot, he's a different person in his own home," Marice told me. "He feels so proud and responsible. He struck the boss for a raise this fall and got it—Father's just beginning really to respect him. And I'm afraid, if I coax him into going back to the big house, he may slip right into his old ways."

Anyone could see the truth of that. But then Marice's pretty blue eyes filled with tears:

"But I just can't bear to feel that I'm going back on Mother. It breaks my heart. When she talks about my not caring about her any more, or not loving my home—I just can't tell her that this little bungalow seems like home to me now."

Why, honestly, living right between the two, I began to feel torn, myself. Sometimes I'd see Mrs. Coates sitting up on that up-stairs porch all alone, and I'd see her wipe her eyes, and I'd feel so sorry for her I couldn't do my housework.

And then I'd see Marice, trying to do the right thing by both her husband and her mother, and being so unhappy all the time, and I'd feel as troubled as though it were my own problem. Actually, though Will said I was the prize nut, there was more than one night that I couldn't go to sleep for worrying.

The worst of it was that all the time I felt hopelessly sure of how it would turn out. I knew that it would be ruination for both Marice and Phil to move back into the big house, and yet I felt just as sure that they would eventually do it. Marice would never be able to hold out against her feelings.

So I wasn't surprised, late one fall afternoon, when I ran over to her bungalow to take her some gelatin I'd made, to find her crying on the couch, and to have her tell me that she'd made up her mind: she was going to tell Phil that night that they'd simply have to go back.

"Mother's failing every day," she said, "the work in that big place is too much for her. And to-day, she told me that, on top of that, she's going to take Aunt Kate's youngest girl for the winter. Aunt Kate, out in Colorado, you know. She's just had a new baby, her eighth, and she's having a terribly hard time getting along."

"Won't the little girl be able to help your mother?" I asked, desperately hopeful. Marice shook her head.

"She's only six. Just the age to be nothing but a care. As though Mother didn't have enough without that!"

Marice talking like that—Marice who, six months ago, was perfectly willing to lie in the shade while her mother took all the care of her baby! My eyes happened to fall on a little book shelf beside the couch. Phil had made that shelf himself, last week-end; he hadn't got around to stain it yet. And now he never would stain it. Someway, that little raw wood shelf suddenly seemed the most pathetic thing in the world to me. It seemed to stand for the home that Phil and Marice would never have.

"Don't tell Phil to-night," I begged Marice. "Wait, anyway, till the little girl actually gets here. Maybe her mother won't let her come, maybe she'll get lost on the way. Maybe *something* will turn up. Oh, don't tell Phil to-night!" And Marice agreed, though hopelessly, to wait till the child was actually here.

That night, I prayed over it. I'm very religious, but I only pray for something special when I'm pushed beyond belief. I don't believe that the Lord should be troubled with things you can possibly handle yourself. But this was beyond me.

"Don't let that child come," I prayed that night. "And don't let Mrs. Coates get Marice back home. Maybe You can think up some way!"

BUT in spite of my fervent prayers, three days later little Katie arrived. And, as though that wasn't enough, the day after she got here she came down sick. Poor Marice was nearly beside herself.

"Oh, I should have gone back when I first thought of it! Now it's too late. Poor Mother! There, in that big house, all alone with a sick child."

And Mrs. Coates was alone. For little Katie's sickness proved to be scarlet fever and the house was quarantined. Marice couldn't move back, Tom couldn't come home week-ends, Betty couldn't come for Thanksgiving. Even Mr. Coates had to board out. Poor Mrs. Coates was left all alone in that house with a child that grew sicker by the day.

I'll say for her that she certainly rose to the occasion like a soldier. Little Katie's mother couldn't come, on account of the

Digitized by Google Original from UNIVERSITY OF IOWA

new baby. There are plenty of women with a child as sick as that who would have packed her off to the hospital. But not Mrs. Coates. She didn't even get a nurse, took every bit of care of that child, herself, day and night.

Doctor Horne told everybody that Mrs. Coates was an angel if ever there was one on earth. He only hoped her health would stand the strain. I felt nearly as worried and responsible for her being there alone as Marice did, and watched with anxious eyes. Mrs. Coates would come to the window on our side two or three times and talk to me through it.

Little Katie had the fever terribly hard; there were three days when she hovered between life and death. But Mrs. Coates pulled her through. Doctor Horne said it was nothing but the wonderful nursing that ever did it.

The day after the crisis was passed, I noticed something queer about Mrs. Coates as she came to the window. She looked pretty tired and drawn, but suddenly I realized that she looked different. She had lost that suffering ghost look she had had ever since she came back home. In spite of showing that she hadn't had any sleep for two nights, it seemed to me that she actually looked happy.

THE day quarantine was lifted, I went in to take a jar of jelly and a doll for Katie. Thin and pale, she was having a tea party in front of the open fire. Her aunt was hovering over her, waiting on her as though she was the Shah of Turkey or whatever he is Shah of. And she was looking at the little girl in the loving, indulgent way she had used to look just at her own children.

As I watched her, bustling about with the little teapot Marice and Betty had used to have, I realized that I hadn't been mistaken that other day. Mrs. Coates was her old self again, wiry, overworked, sunny.

Katie was going to have a long, slow convalescence, Mrs. Coates told me, cheerfully, and she was sending for the next older sister to come on and go to school in Montrose this winter, to keep Katie from being lonesome, seeing that Betty's room was empty. And she didn't know, she added, but that she might take one of the boys too. There was Tom's room. Their mother was having a terrible time with so many children and just a small income.

Everybody in Montrose thinks it's awful, of course, for poor Mattie Coates to be taking on another family, just as she's got her own so nicely off her hands and should be having an easy time. People say they suppose she'll wind up by having all eight of her nieces and nephews on her hands, two or three at a time, working her fingers to the bone for them.

Mrs. Coates doesn't deny this. Just smiles her old patient, sunny smile. She says she wants to help her sister all she can. All that worries her is that she doesn't seem to find time to help Marice as she'd like to. Mr. Coates doesn't mind a bit, he's so relieved to have her happy again.

And, as Will says, it's probably all for the best. It's a cinch that even Mrs. Coates won't be able to ruin eight!

New safeguard found in Japan Tea against several common ailments

"STARTLING" is the word one authority has used to describe it: A new, simple safeguard that may help protect countless men and women against common maladies!

In fragrant cups of Japan green tea has been found a precious food element without which perfect health is impossible.

For lack of this special element, scientists now believe that countless people are needlessly troubled with minor ailments. All too often our three meals a day give us too little of this invaluable element—Vitamin C.

"Important to us," writes one eminent scientist, "are the results of a diet *poor* in Vitamin C. The symptoms are a *sallow, muddy complexion, loss of energy, fleeting pains usually mistaken for rheumatism.* Observation and my recollection of specific cases all combine to suggest that *much of the so called rheumatism that afflicts such a large part of our people is due at least in large part to a diet too poor in Vitamin C.*"

Scientists have discovered a rich supply of the all-important Vitamin C in the leaves of simple Japan green tea

A simple precaution

Most of the foods we eat are lacking in this wonderful element. Aside from Japan green tea, it has been found only in spinach and a few fruits and vegetables.

The startling fact now revealed by science is the richness in this all-important Vitamin C, of that familiar and delightful drink—Japan green tea. The leaves of Japan green tea bring us in abundance this health-giving food element.

If you feel "let down" and are easily tired out; if you suffer from so-called "rheumatic" pains; if your skin is sallow or muddy, take this simple precaution. Drink pleasant, flavor-laden cups of Japan green tea regularly, at lunch, at supper, in the afternoon. Profit by their rich supply of the precious food-element, Vitamin C. It is probable that you will both feel and look more vigorous—more vitally alive after a few weeks. Whenever you drink tea, be sure it is *Japan green tea.* Grocers have it in several grades, at different prices under well known brand names. American-Japanese Tea Committee, 782 Wrigley Building, Chicago.

Rich in health-values

Fruit Nourishment
Body-building Minerals
Energy Value

Just as "good for you" as fresh fruit.

Welch's Grape Juice is the juice of fresh fruit—pressed right from ripe Concord grapes.

It tastes deliciously of the ripe grapes no matter how you serve it,—straight, blended or diluted,—because the flavor is so pure and rich. No other grape juice has the fine flavor of Welch's, because Welch's is pressed from the very choicest grapes.

At the soda fountain, ask for straight Welch's or a Welch-ade. Some favorite ways to serve Welch's at home are printed on every label.

Free: Ideas for Popular Fruit Drinks and occasions to serve them. Send a postcard to The Welch Grape Juice Co., A-83, Westfield, N. Y. In Canada—St. Catharines, Ont.

Mix Welch's half and half with ginger ale.

WELCH'S

Once you've tasted Welch's no other grape juice will do

Houdini's Conquest of America

(*Continued from page 53*)

to open the casket, and within were the three handkerchiefs.

The *modus operandi* was simple, and typical of the conjurer's art. The trick was about a century old:

After Houdini borrowed the three handkerchiefs and tied them together for easier manipulation, they were quickly slipped under his waistcoat and three others substituted. He dropped the three bogus handkerchiefs on a table trap, picking up the opaque glass bowl under which they were to be hidden. Then, by a carefully rehearsed bit of carelessness, he dropped and broke the bowl. To procure another, he stepped toward the wings. The attendant who handed him the fresh cover deftly extracted the real handkerchiefs from under Houdini's waistcoat, and was off for the Statue of Liberty, where, in due course, he was met by a tinsmith who soldered the three within a tin box, which was subsequently placed on the step. The whole stage play had been carefully timed so that Houdini's assistant could catch the four-o'clock boat for the Statue.

Meanwhile, Houdini, turning back to his audience, made the bogus handkerchiefs vanish, delaying the action with his patter so that his messenger could get a good start. The distribution of cards and pencils for the designation of the journey of the handkerchiefs made a further interval. When the cards were collected and dumped upon the platter Houdini added at the top of the pile three designating the Statue of Liberty, which he had concealed in the palm of his hand. From these three the baby was permitted to make an innocent choice. The whole startling effect was the result of careful preparation, sleight of hand, and showmanship.

DURING the next two seasons, 1906-07 and 1907-08, Houdini made tours of first-class vaudeville houses of the United States, and escaped from every sort of restraint.

During a five-weeks engagement at Boston at the beginning of 1907 he gave a surprising exhibition of elusive versatility.

After worsting several ambitious packing-box crews, who sought to restrain him on successive evenings, Houdini appeared at the home of J. S. Fay, Junior, an amateur sportsman who had wagered with friends that he could tie the escape artist so that he could not get loose. Mr. Fay wound Houdini from head to feet with heavy silk fish line, using a coarse needle and a marlinspike to knot and mesh the cords. Houdini's throat was muffled in the cords, and his wrists were so tightly bound behind his back that the twine was lost to view in the swelling flesh. His hips and legs were encased in a network of cords. Mr. Fay took forty-five minutes to complete his job; Houdini an hour and thirteen minutes to get free. His body was a mass of welts and bruises.

Through the spring and autumn of 1907 Houdini added to his repertoire of escapes. At Toledo, Ohio, the Marine Boiler Works challenged him to get out of one of their stoutest riveted boilers. He freed himself in eighty minutes. "Very hard job," he noted in the diary. "Must find some new way to lighten my labors." Two nights previously he had been tied up with tarred ropes by Toledo high-school boys, and struggled for forty-one minutes before he could wriggle free. "Hurt like hell," says the diary.

In the fall, in San Francisco, a large paper bag prepared by a manufacturing firm failed to hold him. The bag was left intact, seemingly as it had been sealed with Houdini inside. In Los Angeles, shortly afterward, a superintendent of mails locked him in a government mail pouch fastened on the outside with a rotary lock. In twenty-five minutes Houdini appeared, carrying the pouch, which he returned apparently undamaged.

Houdini did not employ confederates in his escapes.

ON a visit to Pittsburgh Houdini met with his only serious accident. He had promised to do a high dive, manacled, into the Y. M. C. A. tank, in connection with a local drive for funds. He miscalculated, and his head smashed into the cement bottom of the tank. He was dragged out unconscious, and carried the scar on his head for the rest of his life.

Houdini soon invented a new trick to replace the handcuff act, and as he developed and perfected this it grew in dramatic value. This trick was an escape from a galvanized iron can filled with water, the lid of which was fastened on by a dozen or more heavy outside padlocks. Enclosed in the can and rolled into his little tent after a committee had assured itself that aid from hidden confederates was impossible, Houdini would spirit himself out in about a minute, leaving the water in the can, and all the locks intact.

In the spring of 1908 he wound up a coast-to-coast tour in a blaze of glory and publicity. He was now ready for another long tour of Europe. Virtually all the large cities of England, Germany, Austria-Hungary, Holland, and Belgium were clamoring for him.

Houdini's second continental tour, begun in the fall of 1908, lasted until the spring of 1911, with a break in the middle, during which he made a trip around the world in connection with fulfilling engagements in Australia. At this time he was thirty-four and weighed somewhat under one hundred and sixty pounds. His body was like flexible steel.

For a period, during the early months of his tour, various swimming champions insisted from time to time that they could remain under water in the can longer than Houdini. The best of these challengers managed to remain in the can two and a quarter minutes, while Houdini, on the same occasion, stayed three minutes, thirty-two seconds. At this period he would practice holding his breath for over three minutes, while lying on a sofa in his dressing-room.

There was hardly a river or harbor in northern France, Germany, or England into which Houdini did not dive manacled during this tour, and thousands of people always flocked to applaud this stunt. In

flavor

Guess what—lift the cover—aha!—spaghetti. Tender, creamy curlicues in a happy scarlet sauce. That juicy, fresh-tasting tomato sauce, temptingly seasoned and spiced. That nippy, snappy cheese. Good! Isn't it though? Wonderfully good—and satisfying! This savory combination of delicious flavors—Heinz Cooked Spaghetti—*Italian* style—in tomato sauce with a special cheese—steaming hot.

It was from a rather noted Italian chef that Heinz learned the gentle art of *flavor* in spaghetti. For in spaghetti, you know, flavor is everything—the tomato sauce—the way it's blended—the way the whole of it is cooked . . .

To be sure of quality we make the spaghetti from a special hard *durum* wheat and wash and filter the very air in which it is dried. And our friend, the chef, was delighted to know that we grow the tomato seed and start the plants and use the tomatoes while they are still fresh. For, as he said, it's only from plump, juicy, ripe tomatoes—fresh from the garden—that you get the *real* flavor for the sauce.

Then he suggested what spices to use—and such spices!—personally selected by our buyers in far off lands. And a certain kind of cheese that gives to Heinz Cooked Spaghetti an inimitable zest and savor . . . And particularly he showed our own chefs just how to blend and cook the whole together in our own sunny kitchens.

Flavor! And particularly, *uniformity* of flavor. With any Heinz product you can always be sure of getting the same delicious flavor—wherever you buy it—whenever you buy it.

TREE BUTCHERY—*A typical example of atrocious tree butchery by unskilled workmen. Ten times more cutting was done here than necessary—it only required the removal of a few smaller branches on the left side to give all the clearance needed. This tree is hopelessly ruined—so needlessly. Davey Tree Surgeons not only have knowledge and skill, but they are tree-lovers and faithful workers*

Tree Butchery is on the wane

Progressive wire companies are respecting the rights of the public and the beauty of the trees

HERE is a practical modern problem. We need the beauty and the shade of the trees on city streets and along the highways. The public has a right to the trees, because the public owns them.

On the other hand, we must have the wire companies and the indispensable service they render. These companies require a certain amount of necessary clearance of interfering branches, in order to give the public good and uninterrupted service.

Conscientious wire company officials have discovered that these apparently antagonistic problems can be reconciled. They really did not want to destroy the trees, or to defy public opinion, and they sought earnestly to find a way out.

They found in Davey Tree Surgeons the answer to this vexing problem. As a result of the co-operation up to date between many wire companies and The Davey Tree Expert Company, the following facts have been demonstrated.

JOHN DAVEY
1846-1923
Father of Tree Surgery
Reg. U. S. Pat. Office

The required clearance can be had without resorting to tree butchery—and tree butchery is always unnecessary and inexcusable. As a rule, the required clearance can be secured without cutting more than 10% to 25% as much as formerly. The cutting is confined wherever possible to small branches. The work is done by Davey Experts who make the cuts properly and treat the wounds. No climbing spurs are used to injure the trees irretrievably. Very often expert methods save important branches that would otherwise be cut. Trees with structural weaknesses are braced mechanically to protect both the trees and the wires.

Almost without exception the public is willing to permit this necessary cutting, when it is done by Davey Tree Surgeons, who do it properly and keep the cutting to the lowest minimum. Consequently public relations have been tremendously improved for the wire companies.

But the thing which has amazed the wire company officials is that this work, properly done, costs little more and often less than by the old methods. They have found also that the subsequent cost for repeat work is even less, because in so many cases the trees are trained away from the wires.

Fortunate results so far achieved are a source of immense satisfaction to the Davey Company and will prove increasingly so to the wire companies and the public.

Among the hundreds of prominent wire companies, who have used Davey Tree Surgeons for expert line clearing with eminent satisfaction to themselves and the public, are the following:

Edison Electric Illuminating Co.
American Telephone & Telegraph Co.
Southern Bell Telephone & Telegraph Co.
Southwestern Bell Telephone Co.
Chesapeake & Potomac Telephone Co.
Cumberland County Power & Light Co.
The Niagara Falls Power Co.
Rockland Light & Power Co.
New England Telephone & Telegraph Co.
Wisconsin Valley Electric Co.
Montreal Light, Heat & Power Co.
Mississippi Power & Light Co.

fairly shallow water he would free himself at ease sitting on the bottom, in deeper water while drifting below the surface.

Houdini was enjoying life to the full. His enjoyment glows through the terse notes in his diary during the period. The strain he was putting on his body day after day was something few men could stand, but he carried it off easily enough.

After his engagement in Australia, and while en route to Vancouver, the vessel on which Houdini was a passenger touched at Suva, in the Fiji Islands. The passengers were greatly interested in the native swimmers, who would dive for coins in the shark-infested waters and bring the coins up in their mouths. Houdini at once saw through the simple trick. The divers really caught the coins in their hands, he said, and placed them in the mouth before coming to the surface. Some of the passengers disputed this, and to settle the matter Houdini suggested that he and the best native swimmer be handcuffed and dive after separate coins. He made a wager that the native would not stand the test successfully.

The captain quickly interposed. The sharks, he declared, would not touch the natives, but Houdini would be in great danger. The man-eaters, it appeared, preferred blonds.

Houdini insisted on the trial, but all the islanders refused to be handcuffed. Finally, one consented to have his hands tied with a bit of rope. This was done, Houdini had his hands manacled behind him, and the two coins were tossed overboard.

The native was over after his coin in a flash, before Houdini was even set for his spring. A full minute passed after the man vanished, Houdini after him, in the water; then the native came up, gasping for breath, with his hands still tied and no coin in his mouth. Fifteen seconds later Houdini popped into view feet first. He was still manacled, but both coins were in his mouth.

Later, he explained his secret to the passengers. "I tricked you, just as the natives do," he said. "It is virtually impossible to catch in the mouth a coin falling through the water. As soon as I dove I released one hand and easily seized my coin. Then I followed the native, who was vainly trying to catch his coin with his mouth. When he finally gave up and started toward the surface, I grabbed his coin also. By that time I was down so deep that I feared my ear drums would burst from the pressure, so I started up hastily, feet first, without trying to reverse my position. As I neared the surface I placed the coins in my mouth and snapped the handcuff on again."

MEANWHILE, in the spring of 1912, Houdini was preparing even more difficult feats, of which he saved the principal one for New York during a long engagement at Hammerstein's roof in July and August, 1912. In New York, Houdini could always fill a theatre, but the newspapers still refused to accept him as wholeheartedly as did those of other American cities and most European cities.

When he announced early in July that he would try to escape from a packing box, weighted and tossed into the harbor from an East River pier, the papers noted his defy warily. However, they sent reporters to cover the story. They found Houdini with a stout-looking packing box weighted with two hundred pounds of lead and also an assortment of regulation handcuffs and leg-irons, in which the performer invited the newspaper men to fasten his wrists and legs before he was nailed in the case. They also discovered a squad of policemen, who informed Houdini that no one was permitted to commit suicide from a pier and he must gather up his box and his cuffs and clear out.

Houdini then hailed a tug and, inviting all the newspaper and camera men aboard, steamed out into the harbor, much to the disappointment of the general public assembled along the water front. One persistent newsboy dived off the pier and struck out after the tug. He was hauled aboard and permitted to stay.

The skeptical reporters presently found themselves taking the affair seriously. They were enlisted to put the irons on Houdini. Then he insisted that they superintend the nailing of the box. After the cover was hammered down, a steel band was fastened about the box for good measure. Then it was roped and allowed to slide down a chute into the waters of the bay, where it floated, almost wholly submerged at the end of one hundred feet of line.

At the end of fifty-seven seconds there was a splash beside the box, and Houdini bobbed into view. He swam to the tug and the box was hauled in after him. It was intact. The cover was then pried off and there at the bottom lay the handcuffs and leg-irons. Their locks had been sprung open and they were in good working order.

That was news, even in New York, and thereafter the press of the metropolis took Houdini seriously. One of his greatest endurance feats was later performed in New York, and was sensational copy for the newspapers. In this feat Houdini was sealed in a coffin, lowered under water, and remained down for one hour and thirty-one minutes. The full story of this triumph of slow breathing is told next month in the instalment about Houdini's fight against fraudulent contentions by performers.

ONE incident of Houdini's long run at Hammerstein's escaped the attention of the press at the time.

His weekly salary was one thousand dollars, the best money he had made up to that time in the United States. At the end of his first week he asked that the sum be paid him in gold. William Hammerstein, after some chaffing, acceded to the odd request, and Houdini departed with a heavy bag of coins. He drove home with it and dashed into his mother's room.

"Mother, Mother, do you remember the promise I made Father years ago, that I would always look after you?" he cried. "Look what I am able to bring you now! Hold out your apron!"

With that, he poured the gold in a glittering stream into her lap. His mother, with tears in her eyes, clasped him to her.

Houdini always described this incident as the greatest thrill of his life. Probably he did not exaggerate. It was both good sentiment and good theatre, and Houdini reveled in both.

He clinched the conquest of New York a year later when he came all the way from Bucharest to open Hammerstein's roofgarden for a second season.

Why our diet damages our gums

NINE-TENTHS of these widely prevalent troubles of the gums, dentists say, can be definitely ascribed to this regime of soft cookery under which, as a nation, we live.

Our soups and sauces, our vegetables and our puddings—all are cooked to a soft consistency. We are "choosy" about the cuts of meat we buy. The roughage and the fibre have departed from our food. Our diet, so soft and so delicious, has lost its power to stir our gums to health.

And our national bad habit of eating too hastily does our gums no good. For, deprived of the natural massage that careful mastication would give, our gums have grown soft and tender.

It is from these two causes that gums grow logy and dull. The blood does not circulate, the gum becomes unhealthy. "Pink tooth brush" appears. Other troubles threaten.

Why massage with Ipana is so good for the gums

Dentists advise gum massage because it stirs up the gum tissues to health, because it speeds to the depleted, softened tissues a fresh supply of rich and wholesome blood. Dentists recommend massage with Ipana Tooth Paste because Ipana, through its ziratol content, is of definite value in toning and strengthening gum tissue that is weak and undernourished.

Give Ipana a full month's trial

The ten-day tube the coupon calls for is gladly sent. But a full-size tube from your druggist's, containing enough for a month's use, makes the better test of Ipana's power to care for your gums and to keep your teeth white and brilliant.

IPANA TOOTH PASTE

BRISTOL-MYERS CO.
Dept. J68, 73 West Street, New York, N. Y.

Two Simmons gifts for two June graduates

A YOUNG man? Why not send him a modern chain for his graduation watch . . . or a modern chain to replace the one he has worn these last four years? The Simmons Waldemar above (29618) is priced at $7.50—in natural or yellow gold drawn over a metal base. The same pattern, made by the same process, comes in green or white gold or a combination of the two, at $9.50. Other of the handsome Simmons styles — belt, vest, Dickens, Waldemar—range from $4 to $15.

A young lady? The Simmons bead and crystal necklace is both recent and popular. The price of No. 29547, at right, is $9. Other delightful necklaces in the Simmons selection include plain gold-filled beads, lately in favor, and sharing the popularity of the bead and crystal combination. Reasonable prices of the Simmons necklaces run from $6.50 to $12. R. F. Simmons Co., Attleboro, Massachusetts.

SIMMONS
TRADE MARK
CHAINS AND NECKLACES

The swivel says it's a Simmons

The famous convict ship "Success," dating from the eighteenth century, which had been raised from the bottom of Sydney Harbor and was making a tour around the world, happened to be in New York at this time. Of course Mr. Hammerstein's press agent suggested to the captain that he challenge Houdini to escape from one of the ancient teakwood cells, with their doors six inches thick, and as a result the captain and Houdini exchanged some alluring defiances by radio while Houdini was still on the ocean. The log of the old vessel, according to the captain, showed that she had never lost a prisoner. In New York Harbor, not many minutes after the captain had chained Houdini to ring bolts in a cell below the water line, this record was broken. Houdini got out, dove through a porthole and swam about until he was picked up. The massive door was left locked behind him.

AT THE roof garden, Houdini treated his audiences to an improved version of his water-can trick, which he had been perfecting in Europe. Two imitators had appeared, one in Europe and one in Australia, and as early as 1910 Houdini determined to devise a trick which no one would have the temerity or the natural agility to undertake after him. He had drawn up plan after plan and practiced incessantly. Now, after three years of work the thing was done.

It looked simple enough: The can, filled with water, was placed in an iron-bound wooden chest, and into this doubly-sealed prison Houdini was lowered, head downward, his ankles encased in a thick board, like a man in the stocks. The lid was then clamped down and fastened with padlocks, which any member of the audience was permitted to furnish if he suspected Houdini's locks. The trick was spectacularly effective.

Several years more were to elapse before the trick finally evolved into Houdini's Water Torture Cell, in which the walls were of glass, so that the spectators could watch every stage of the incarceration and see the performer hanging, head downward, in the water.

The engagement at Hammerstein's lasted only two weeks. Then came a brief three weeks of vacation. He sailed on the "Kronprinzessin Cecile," July 8th, to continue his European engagements. He was booked to open at Copenhagen in ten days.

Persons at the pier beheld a curious sight. They saw Houdini clinging to a little old woman in black silk, embracing and kissing her, saying good-by and going up the gangplank, only to return to embrace her again. It was his mother.

He was the last passenger aboard, leaping up the gangplank just before it was drawn up. The last he saw of his mother, she had caught one of the paper streamers he had thrown, and he was leaning far over the rail holding the other end.

They cabled to him at Hamburg that his mother had suffered a paralytic stroke and was not expected to live, but he had already moved to Copenhagen and the message did not catch up with him for several days. It was handed to him by one of his assistants as he entered the theatre. He immediately returned to his hotel like a man in a trance. His wife found him incapable of thought or action. She hastily

The Marquis-Autocrat. Thin model, 17-jeweled movement in 14k gold-filled case with embossed raised figure dial. A highly satisfactory and faithful timepiece. $50.00

The new Marquis-Strap. Unusually attractive 14k gold-filled case, curved to the arc of the wrist, fitted with 17-jeweled movement of very high quality. $50.00

Extremely small and smart rectangular wrist watch with fine 17-jeweled movement in 18k solid white gold case, hand engraved or inlaid enamel. $75.00

There's a Golden Rule of Giving

Suppose it were your own graduation that's so near. Isn't there some one gift you might prize above all others—some gift peculiarly appropriate, useful, lasting? Isn't that what you should choose to give?

Such a gift, surely, is a good watch. And here in America are made watches which maintain standards of accuracy and service that are unsurpassed in the world. One of these is Illinois.

Illinois is one of the oldest and one of the greatest American watches. For more than 50 years Illinois Watches have been made with such ideals of precision and artistry that many which have been carried twenty, thirty, even forty years are still giving satisfactory service.

Give the kind of watch you would want for yourself. And when you get it, just ask your jeweler to show you an Illinois. He has known them ever since he has been in business, and he knows what a good watch an Illinois is.

Here's what a Belt Buckle *can* be!

You've never seen another belt buckle quite like these by Wadsworth!

Permanently non-slipping, with a special patented grip that locks itself tight in any position and automatically adjusts itself to any thickness of leather.

Offered in sterling silver or in 14-kt. white or green gold filled, of the same quality required in the making of high grade watch cases.

Designed with the same artistry, fashioned with the same exacting standards that have made Wadsworth Watch Cases the consistent choice of the world's leading watch manufacturers for the dress and protection of their finest movements.

Just as your jeweler can tell a good watch case at a glance by the mark "Wadsworth Quality" stamped inside, so you too can quickly judge a belt buckle by the same mark stamped on the back.

See the Wadsworth Belt Buckle. Compare it with any other buckle you have ever known. Then let your jeweler point out *additional* reasons why you should prefer a buckle by Wadsworth, either as a gift for someone else or for your own use. Find out what a belt buckle *can* be!

You will find that your jeweler has a pleasing variety of designs for you to select from, in both wide and narrow models, alone or in sets including watch chains.

Prices: sterling silver, $4.50 to $7; 14-kt. gold filled, $9 to $12. Sets: sterling silver, $9 to $12; 14-kt. gold filled, $15 to $20.

WORKERS IN PRECIOUS METALS

packed some of their clothing and they took a train back to Germany, leaving Houdini's first broken contract behind him.

The Houdinis managed to catch for the return trip the same vessel on which they had sailed from the States; but Mother Weiss died before they reached home.

Many months Houdini was moody and distracted. For the first time in his life he seemed to lose interest in his work, and also in his manifold collections and his professional contacts. He neglected his diary, and the notes for the remainder of 1913 are scattered and sketchy, with an undercurrent of morbid preoccupation.

Lamentations about his mother's death bob up at intervals in the diary. Typical is the entry of November 22d, 1914: "Arrived from Boston 7 A. M. . . . After dinner I go alone to Cypress Hills and visit the family plot. Bleak and windy. It is sixteen months and five days since Mother went to sleep. I certainly feel lonely."

For the rest of his life, whenever he left New York on a tour, his last act was to visit his mother's grave. He would lie there face downward, and tell her of all his plans, as if she could really hear him.

According to Mrs. Houdini, her husband was never quite the same after his mother's death. Something of the youthful quality went out of him, something of his earlier joyousness.

For a long period, covering several years, he would find himself at intervals standing on the edge of a void across which his mother had vanished into the darkness. His frequent visits to her grave and his long outpourings there were a sort of groping after her. From his early years he had an almost morbid curiosity about what he liked to call the Great Mystery, and he was always making pacts with friends whereby, if one of them died, he was to attempt to communicate with the other. He had such a pact with Lafayette, one with John Sargent, his associate and librarian, one with his wife. He attempted seriously, over a period of years, by every means that offered, to pierce the veil and get in communication with his mother. His impulsion, the nature of his attempts, their failure and his subsequent disillusionment transformed him, in his later years, to the stern crusader against quackery and fraud.

HOUDINI'S adult life is divided into two periods. His mother's death marks the cleavage.

At the beginning of 1914 Houdini was touring England and Scotland, somewhat recovered in spirits. The tour over, he sailed, the latter part of June, on the "Imperator" with former President Roosevelt as a fellow passenger.

Theodore Roosevelt and Houdini had many qualities in common. Both were daring, impetuous, strenuous characters. Both were temperate livers and home-lovers. Both were consummate showmen. They struck up a friendship on board and they enjoyed taking their morning exercises together—if Houdini was not too seasick to appear.

One morning while Houdini was walking with Roosevelt, one of the ship's officers asked if he would give a performance at the concert the next night.

"Go ahead, Houdini," exclaimed Roose-

Original from UNIVERSITY OF IOWA

velt eagerly, "give us a little séance." (They had been talking about spiritualism.)

In the evening Houdini began with some card sleights in which Roosevelt was allowed to select the cards. "I was amazed," said Houdini, "at the way he watched every one of the misdirection moves as I manipulated the cards. It was difficult to baffle him."

Then came the slate writing by "spirits." This is a standby of certain mediums. The spectator writes a question, which he conceals from the operator, on a slip of paper. The paper is inclosed between two blank slates, between which a stub of pencil is usually inserted, with which the "spirits" may write.

Roosevelt took great pains to see that Houdini had no opportunity to read his question. With his back turned to the conjurer he wrote, "Where was I last Christmas?" He folded his paper carefully, sealed it in an envelope, and placed it between the slates himself. When they were subsequently opened, one slate revealed a map of the South American wilderness explored by Colonel Roosevelt the previous year, including the country of the River of Doubt, with an arrow pointing, to which was affixed the legend, "Near the Andes." Roosevelt's whole itinerary was outlined on the map. The slate bore a copy of the signature of W. T. Stead, the English editor and ardent spiritualist, who had been lost on the "Titanic" in 1912.

As Roosevelt had spent the previous Christmas in exactly the location named, he was astounded at the result obtained. "How did you do it last night? Was that real spiritualism?"

Houdini grinned. "It was just hocus-pocus," he replied; but he would give no further explanation.

As a matter of fact the trick was partly the result of clever preparation, partly a lucky coincidence. In one of the autobiographical fragments Houdini left behind he gave a complete elucidation. Here is his story:

"When I went to the Hamburg American Steamship Company to get my tickets, the man at the desk whispered in my ear, 'Teddy Roosevelt is on the boat; but don't tell anyone.' As I walked out, I began to think what I could do with the information. I always give extemporaneous or impromptu performances on shipboard, and, in fact, I sometimes prepare two weeks ahead for an impromptu show.

"The London 'Telegraph' was beginning to publish the Colonel's story of his trip to South America. I jumped into a taxi and went to the 'Telegraph' office to see what I could pick up. Some of my editorial friends came forward with various inside information, and I obtained a map of the trip, as yet unpublished. Then I prepared my slates and was ready for the séance. I found it easy to work the Colonel into a state of mind so that the suggestion of the séance would come from him.

"On the night of the séance I asked the passengers generally to write questions. Then one question was to be selected by someone from half a dozen placed in a hat. I had secretly prepared half a dozen of my own, and of course I intended to see that only my envelopes went into the hat. They all contained the same question. 'Where

A NEW

Ingersoll

WATERBURY

Jeweled--the small, stylish 12-size
Now with an enduring, platinum-like

CHROMIUM FINISH CASE

of handsome engraved design

PLATINUM-like in blue-white brilliance; diamond-like in hardness; amazingly resistant to rust and corrosion!

Such are the qualities of chromium—qualities that make chromium plating an ideal finish for a watch case.

The new Waterbury is the first watch to have this brilliant and enduring finish. Thus the Waterbury at once attains greater beauty and more endurance. But in other ways, too, new beauty is added. The tasteful artistry of the engraved design . . . the Butler finish metal dial with sunk second-circle and graceful hands and figures . . . the Butler finish back—all will appeal to you.

A new pull-out set makes it delightfully easy to set with nice precision.

These improvements and refinements are built on the solid foundation of jeweled accuracy and remarkable sturdiness that have made the Waterbury one of America's most famous and most popular watches.

The price is just $5. It is easily "the best watch $5 will buy," and looks the part of a very much higher priced watch.

At dealers everywhere.

$5.00

THE BEST WATCH WILL BUY

was I last Christmas?' That was the question I wanted to answer for the Colonel, and by a strange coincidence he asked exactly that question.

"Here is how I got his message: The morning of the séance I noticed two books on a table in the salon. I took them into my stateroom, and with a razor blade I cut alongside the edges of the cover of each and lifted up the outer cloth binding. Below this I inserted a sheet of white paper and on top of this a carbon sheet. Then I carefully glued the cloth binding on the cover, as it had been. I then replaced the books in the salon.

"At the séance I handed the Colonel a pencil and a piece of paper to write his question. As he started to write, with the paper in the palm of his hand, I exclaimed, 'I beg your pardon, Colonel,' and reached over and handed him one of the prepared books to rest his paper on.

"Victor Herbert, who was standing near, said, 'Turn around. Don't let him see it. He will read the question by the movements of the top of the pencil.' The Colonel then faced abruptly away from me and scribbled his question in such a position that I could not see him do it. Of course that made no difference to me. After he had sealed the question in an envelope, I reached over and took the book from him, apparently to replace it on the table. As I did so, with my back to the audience, I tore the cover and peeked at the question. By a lucky chance it proved to be exactly the question I had prepared for.

"Knowing what was in the Colonel's envelope, I did not have to resort to sleight of hand, but boldly asked him to place his question between the slates himself, as I held them in the air. While I pretended to show all four faces of the two slates, by manipulation I showed only three. My 'message' from W. T. Stead was already on one slate. The Stead signature was copied from that of a number of his letters picked up in London.

"It can be readily seen why the Colonel was willing to believe that I possessed the power of drawing communications from spirits, whereas I was simply resorting to a material experiment, in which, as it turned out, blind chance played a large part."

THE story of Houdini's astounding demonstration was of course sent by radio to the news associations, and gave him a flying start when he opened his third successive season on Hammerstein's roof in New York on July 9th. By this time, the metropolis had taken him to its bosom, and he was welcomed as a favorite son.

At the beginning of September, 1918, the people in Kansas City had their curiosity aroused by an announcement that Houdini, then playing at a local theatre, was to be strapped in a straitjacket by members of the city's detective bureau, and then suspended head-downward from the Kansas City "Post" building. The detectives averred that neither Houdini nor anyone else could escape in such a position from their viselike contraption; Houdini predicted that he could. The police agreed to give him fifteen minutes for the test.

At noon on September 8th a crowd pressed about the "Post" building. Houdini and the detectives mounted a platform, and the crowd watched silently while the men from headquarters laced the performer into a substantial leather and canvas jacket, his arms pinioned in closed sleeves. Trussed up in this fashion, Houdini's heels were fastened to a block and tackle, and he was hoisted about thirty feet above the sidewalk.

Almost immediately the suspended body began a series of violent contortions. To the watching reporters, just below, it seemed as if the man had no bones, or as if each bone were vertebrated and flexible. In some fashion he secured play for his arms. As he twisted and wriggled, the tight cocoon of canvas and leather slipped jerkily downward toward his head. His rapid contortions made it resemble a bag overcrowded with snakes thrashing about in a death struggle. A few more wrenches, and the jacket hung free over his head. With a loose hand he flung it off and tossed it far into the crowd. Several thousand persons cheered wildly. Houdini, breathless and smiling, was lowered to the platform. "Two and a half minutes," said the chief of detectives. "I'd like to know how you did it." Houdini did not tell.

Thus a new feat was added to Houdini's repertoire. It was altogether novel, pleasantly hair-raising, and uncanny. Houdini performed the stunt at frequent intervals for the next eleven years, and it seemed to gain steadily in attractiveness.

IN LOS ANGELES some inventive challengers dared Houdini to let them bury him alive, manacled, under six feet of earth, to see if that would hold him. He made the condition that they first bury him in one foot deep, then two, and so on, so that he could work up gradually to the six-foot test. A place was selected near Santa Ana, where, as Houdini knew, there was sandy soil. He had no difficulty in breaking out of the shallower graves; but he had some trouble at the four-foot and five-foot levels. By that time, the challengers were growing apprehensive, and some of them suggested that the tests had gone far enough. Houdini, however, insisted on proceeding. Accordingly, the extra foot of soil was dug up, Houdini manacled and flopped in, and the six feet of soil was shoveled over his body.

It was then that the daredevil had a momentary lapse into panic that nearly cost him his life. Gruesome fancies paralyzed his initiative for some seconds, when breath was exceedingly precious.

He pulled himself together and commenced to claw at the earth, following his procedure at the shallower interments; but presently his strength began to fail. Then he made another mistake: He tried to shout, merely wasting more precious breath and choking his mouth and nose with sand. Finally, more by instinct than reason, and almost unconsciously, he resumed his molelike efforts and at last burst through into the sunlight, completely exhausted.

That was a narrow escape.

On various occasions, Houdini was challenged to escape from safes of various sizes and makes. He would be duly locked inside and the combination set, and in a few minutes the steel door would swing open and Houdini would jump out. His profound knowledge of locks was at the bottom of this apparent miracle. When he

A BEAUTIFUL MACHINE—and as practical as it is good looking. Compare Corona with an office typewriter. It has the same standard keyboard—the same full width carriage—the same type-bar action. There's a real variable line spacer—paper guide—12-yard self-reversing ribbon—all conveniences. Yet Corona is gracefully compact, light in weight, comparatively inexpensive.

Now in addition to the standard black finish you may have Corona in Duco finish if you desire—to match the color scheme of desk or room.

Our local representative will gladly leave a Corona at your home for you to examine at your leisure—and without obligation. Sold on convenient terms.

L C Smith—the Ball-Bearing Office Machine. Its light touch and easy action increase output and eliminate fatigue.

An opportunity awaits you!

Stop and think for a moment. How would you like to have plenty of spending money—and besides that win prizes, the things you have always wanted? You can do both and very easily too.

There are thousands of fellows just like you, who have chosen the lane to happiness at the cross roads and are now having the fun of their lives earning their own spending money and winning such prizes as a bicycle, sporting goods, fishing and scout equipment. These fellows are Crowell Junior Salesmen.

Every week Crowell Junior Salesmen deliver three of the best known magazines to regular customers. It takes but a few minutes of their spare time and does not interfere with their school work. You can do the same if you just stop for a moment. Look at the coupon—sign your name and address—Mail it at once.

MR. JIM THAYER, Dept. A-8,
The Crowell Publishing Co.,
Springfield, Ohio.

Dear Mr. Thayer: I want to know more about being a Crowell Junior Salesman.

was locked in a safe he would have a small screwdriver concealed on his person. As soon as the door was closed he would unscrew the cover over the locking apparatus. A safe is unlocked when the various numbers of the combination release severally a series of tumblers, which free the catch. Houdini would manipulate the apparatus until all the tumblers fell. Then he would replace the cover over the apparatus and push the door open.

This process sounds absurdly simple; but in fact there are gruesome possibilities of mischance. In a small safe there is not enough air space to provide a man with sufficient oxygen to endure very long. If the artist bungled his job and the locking apparatus became jammed, it would probably be necessary to dynamite the safe to free him. In Houdini's own opinion, being locked in a safe was his most dangerous hazard.

When Houdini sailed for England in 1920 to fulfill contracts made seven years before, and held off by the war, he had become an institution in his own country. Thousands of newspaper columns had been written about his exploits and his career. For several years his name or his feats had been in common usage by editorial writers, newspaper columnists, paragraphers, cartoonists, and the writers of advertisements. Funk and Wagnalls' New Standard Dictionary, issued in 1920, contained the following:

HOUDINI, HARRY (1874—), American mystericist, wizard, and expert in extrication and self-release.
HOUDINIZE, *vt.* To release or extricate one's self (from confinement, bonds and the like), as by wriggling out.

In the language of the street "to do a Houdini" had become a common expression for vanishing, breaking away. Through the length and breadth of the land Houdini was regarded as the symbol of elusiveness and illusion.

HE NEVER wearied of performing or doing other favors for children or old persons, especially old women. When he produced bouquets of flowers out of thin air at his performances any white-haired woman in the audience was sure to have a rose tossed into her lap with a reverent and affectionate gesture in which there was more than mere showmanship. Each week Houdini's mail would contain scores of letters from old ladies. They were the only "mash notes" to which he paid any attention. Many of them he kept.

He was continually embarrassing managers by insisting that the entire registry of some old people's home be invited to a performance, often suggesting that free transportation be provided for them. In his later years he added prisons and institutions for the feeble-minded to his places of call. Among many of the convicts he found a sort of semi-professional appreciation of his skill.

Houdini's love for children was a byword among managers. Hardly a week went by that he did not give a performance at some hospital or orphan asylum or some other institution, and he invited the inmates in great blocs to his regular shows. He even invented a whole performance for blind children.

Playing in Edinburgh, Scotland, in cold weather, Houdini was shocked at the number of boys and girls on the streets without shoes. He bought three hundred pairs at a bootmaker's and invited all shoeless children to the theatre. His fellow performers became infected with his charitable enthusiasm and the whole cast volunteered as shoe-fitters to the children. For a time the theatre resembled a settlement house. In the end, there remained a considerable surplus of children without shoes; so Houdini gathered together the disappointed ones and rushed off with them to the bootmaker, cleaning out all his children's stock. A week later, in Glasgow, he kept an audience waiting ten minutes while he stopped to mend the broken crutch of a little crippled girl he had met on the street.

As with children, he had a way with animals. He was continually adopting dogs, cats, canary birds, parrots, and other pets and training them to various tricks. He taught his pet fox terrier, Bobby, to escape from a pair of tiny handcuffs; and Bobby the Handcuff Dog won considerable fame in his day. Houdini also trained an American eagle to fly about and fetch and carry at his command.

Because of his tenderness for helpless persons, he was constantly adding superannuated or incapacitated persons to his list of pensioners. At the time of his death he was supporting many persons suffering from various disabilities. Some of them he never even knew personally.

HIS own marriage remained both a most intimate companionship and a romance for Houdini for thirty-three years. He was never too busy to compose an elaborate love letter to his wife. After the death of his mother, in 1913, he wrote one of these letters every single day up to the time of his death—many of them long compositions, none casual lines. If he was at home, he would hide them about the house, as parents hide Easter eggs for their children. For six months after his death, in 1926, until she sold the house and moved away, Mrs. Houdini continued at intervals to discover these letters.

Reciprocally, he treasured every scrap of writing from her. The most unimportant domestic notes written by his wife he would file away among his private papers. After his death his files revealed literally reams of these, including bits of paper with lines like: "Chicken in the ice box—pie on pantry shelf. BESS."

These diverse elements were compounded in the unusually fascinating human being, Houdini, who was at once self-sufficient, quite boyishly helpless, quick-tempered, tender-hearted, stern, sentimental, sophisticated, childlike, lavish, frugal, impulsive, patient, resentful, kindly, awesomely sincere. Cultured persons who met him in his later years seldom suspected that his schooling had ended at the age of eleven, and that he had started his professional career with the phrase "You can see, ladies and gentlemen that I ain't got nothing up my sleeve." He had moved far beyond such things. "Had one noticed any lack of education about Houdini," remarked a woman, who herself had all the education that a New England Brahmin could command, "it would have been a thing of no consequence, because of his rare and overpowering personality."

This Advertisement Should Send Men and Women *by the Thousands* into Physicians' Offices

To be treated for disease? . . . *No! To come out with the means for such health and vigor as they have never known before*

DO you think that an exaggerated statement? Ask your physician. See if he doesn't substantiate every word we say.

The reason is simply this: the life-giving force of the summer sun has been reproduced in a lamp that is one of the scientific marvels of the age. It will bring into your home—all year 'round—the sun-health which our modern artificial life denies us.

The invisible ultra-violet rays of the sun have been discovered to be of the utmost importance to health.

They are *essential* to our well-being. Lacking them we lose vitality, become thin-blooded, deficient in energy, half-alive, half-efficient, easy victims to disease.

And most of us *do* lack them. We are literally starved for sunlight.

For these essential ultra-violet rays cannot penetrate the glass behind which we spend most of our lives, nor the clothing with which we cover ourselves the year 'round.

And in many parts of the country, authorities say, there is practically no ultra-violet irradiation, even from direct sunlight, during the winter months.

You can have this glorious source of health in your own home—at little cost.

It is a tribute to the toughness, the tenacity, of our bodies that we are even half well.

A rich source of health

For years the Alpine Sun Lamp has been used by physicians in the treatment of disease—as a remedy for rickets, anaemia, skin diseases, digestive disorders, as a general tonic and conditioner. It is recognized as the standard artificial source of the therapeutic rays of sunlight. More than 100,000 physicians both here and abroad have purchased it.

Today you can have this rich source of health in your own home. Under the direction of your physician you and your family can bask at will in its energizing, health-giving rays.

Stripped of the encumbrance of clothing you can feed your sun-starved body—lie back in comfort while the rays of health steal through your skin, enriching your blood, touching frayed nerves with a healing, soothing gentleness, reaching in to stir vital glands into normal, healthful activity, increasing your power of assimilation, killing harmful bacteria that may be on your skin or in your blood, increasing your resistance to disease, flooding your whole body with energy and well-being.

Just a few minutes at a time, at your convenience, is enough.

Let us tell you in detail how easily you can have this source of health. Send in the coupon below for full information. Act today. Clip the coupon now.

What Ultra-violet Rays are and What They Do

WHEN sunlight is refracted through a prism it is broken up into the seven colors, as in a rainbow—red, orange, yellow, green, blue, indigo and violet. These colors are caused by light rays of various lengths. The longest rays show red, the shortest violet.

But beyond the long red rays are still longer ones, called infra-red rays, which are too long to make an impression on the eye. And beyond the short violet rays are certain still shorter rays, which are too *short* to make an impression on the eye. These are the invisible *ultra-violet* rays.

The sole function of the infra-red rays and light rays is to furnish radiant heat and light. But the *ultra-violet* rays have been discovered to be of tremendous importance to health.

The Health Rays

These rays, physicians have proven:

1. Increase the supply of haemoglobin in the blood.
2. Increase resistance to disease.
3. Prevent or cure rickets in children.
4. Increase the capacity of the body to absorb the bone-building elements from foods.
5. Promote growth.
6. Impart a smooth, healthy tan to the skin.
7. Supply the essential vitamins A and D.
8. Are of the utmost therapeutic value in the treatment of many diseases.
9. Are of great aid in cases of mal-assimilation and digestive disorders.
10. Have a general tonic and energizing effect on the system.
11. Destroy most harmful bacteria in just a few minutes' exposure.
12. Stimulate important glands and make for greater vitality.

Note: Alpine Sun Lamps may be procured only on the prescription of your physician.

A DOCTRINE

in which some Notable Advertisers have discovered profit possibilities

IT SEEMS STRANGE, when you come to think of it, that the well proved doctrine of creating consumer demand has not been more widely applied to the home.

Only a moment's thinking about how things are bought in your own home will convince you of its applicability to a wide range of products.

Mother is the purchasing agent to be sure—but like all such agents, how sensitive to the likes and dislikes of her principals!

Just let father, or the children, say, "Why don't we have blinkblanks for breakfast?" and see how soon they appear.

Even about things for her own use, what mother does not value the public opinion of her family?

• • •

ALL of which leads us to say that the great American family is the real seat of power for the purchase of most products—and that "the more *members* you tell the quicker you sell."

During 1927 some notable advertisers like Heinz, Royal Baking Powder Company, Quaker Oats Company and Cream of Wheat came to this conclusion. And that just naturally brought them into The American Magazine, because numerous investigations by advertisers and independent organizations have shown that *The American leads all magazines* in its reading by *all members* of the family.

• • •

AS a woman's magazine alone, it usually ranks second or third. As a man's magazine, first or second. But in its combined reading by fathers, mothers and young people, it is overwhelmingly first.

If you want to reach, *at one advertising cost,* both mother and her group of consumers, you can do it through The American Magazine in 2,200,000 real American homes.

• • •

952 Families tell how they buy . . .

From the most unusual marketing investigation ever undertaken, the significant fact was learned that *two or more* members of the average family dictate the selection of most of the merchandise the family buys.

For example, in 72% of the 952 families, two or more members influenced the purchase of a car. In 63% of the families, *two or more* members influenced the choice of canned goods. In 76% *two or more* members influenced the selection of tooth paste.

Therefore, it is obviously an economy for advertisers to use those publications which reach "two or more members" of the family. By every test, The American is the magazine which does that most effectively. Impartial investigations conducted recently by five leading universities prove The American to be overwhelming *first in combined reading by all the family.*

THE CROWELL PUBLISHING COMPANY ~ NEW YORK, N. Y.

Paine's Career is a Triumph of Early American Virtues

(*Continued from page 41*)

to men who had so much more money than I ever dreamed of having. Then I happened to read a series of articles by Curtis Guild in the old 'Commercial Advertiser,' which gave me the necessary courage.

"Once started, I completely lost my sense of embarrassment. I discovered that older men liked to talk to me about things in which they were interested—and I attribute that fact also to my long and rather wide course of reading. One of my first clients was interested in the possibility of railroad development in China. It happened that I knew something about it, and he told me afterward that he gave me his business because I was the only man he had found who did."

"A case of knowing what to read," I asked, "and reading it?"

"More than you know!" he flashed, swinging 'round in his chair and facing me almost belligerently. "I don't mean that I knew I was going to want to know about China the first day I opened my doors, but I did know I'd have to know about it *sometime*. I used to read fiction of course. I'd read it now, if my eyes were as good as they used to be. But I've always saved most of my reading time—now I save all of it—for books that tell me things I particularly want to know.

"It's the same way with me today as it was then. The first man who comes into the office may be interested in Polish bonds, the next man in water power in the Southwest. In order to be of real service to these people, a banker must know a great deal about a great many subjects. And if he can't be of real service, he's lost."

As W. A. talked in those sharp, sawed-off syllables of his, I was impressed with the fact that he is a curious combination of "pep" and poise. He would have made a great salesman, if he hadn't been such a great boss.

"WE DIDN'T make much money that first year," he said; "but we had two very wonderful experiences: One came at the very beginning, when my father, who hadn't been able to earn much of anything for a good many years, and wasn't supposed to have a cent to his name, dug up three thousand dollars from somewhere and insisted on letting me have it to use in my new business.

"I tell you, that show of confidence made me feel good.

"The other experience came near the end of the year. My grandfather, Patten Sargent, who had been in the banking business himself in his youth, had shown considerable interest in our venture from the start. A moral interest, I mean. He'd come in and sit around for an hour at a time. Once in a while, he'd say:

"'Well, Willie, how's business?'

"Of course I'd say it was fine. Business is always fine to a young man—even

Hair *facts*? Hair *fables*?

Take your choice

There are readers (but probably not of this magazine) who believe anything in print.

So, perhaps, there is a place (but not in this magazine) for the advertising counterpart of the old-time medicine show where the Professor sold a magic fluid guaranteed to cure everything from gout to baldness.

But we believe you prefer simple straight facts—so will give you some:

Doctors have been studying the care of the skin and scalp for a great many years. And, for one thing, they long ago learned that one of Nature's most effective remedies is pine tar—pine tar from pine woods where the very air crackles with health.

But in the early days there was a difficulty; pine tar alone could not conveniently be applied to the scalp. So 60 years ago Daniel Packer began to incorporate pine tar in a soap—Packer's Tar Soap. Ever since, physicians have been recommending Packer's—largely because of the healthful pine tar in it.

If you talked to a doctor today about guarding your hair, he would probably tell you something like this: In the care of the average head of hair there is just one real secret. Wash it frequently with a fine soap like Packer's and—massage the scalp.

A hair soap, of course, should yield a mountain of lather—at the double-quick. Packer's does! And a great many men tell us that the piney fragrance of this willing Packer lather makes a shampoo fun—really!

So, if you suspect magic promises but wish to give your hair as fine and intelligent care as it can get, outside of special treatment by your doctor, we suggest that you get a cake of Packer's Tar Soap in its metal box and begin to give your scalp the benefits of weekly scalp shampoos.

Send 10c for Sample and Manual

For 10c (stamps or coin) we will send you a generous sample of Packer's Tar Soap and a copy of our new Manual, "The Care of the Hair." This profusely illustrated 28-page book presents the most scientific thought on the care of the hair; suggestions for the care of dry hair, oily hair, falling hair and dandruff. Fill in coupon, clip and mail.

THE PACKER MFG. CO., INC., Dept. 6-F
Box 85, G. P. O., New York, N. Y.

I enclose 10c. Please send me sample half-cake of Packer's Tar Soap and your Manual, "The Care of the Hair."

"PURE AS THE PINES"

Digitized by Google Original from UNIVERSITY OF IOWA

Has the . . . *New Blade Fallacy* cast a spell over you?

Spell is what it is, for men don't reason when they think new blades are ready for shaving when they unwrap them. So long as the spell lasts and men try to get satisfactory shaves by taking a new blade every few days they will miss getting really fine shaves.

The error comes in thinking that a blade which left the factory with a keen edge holds that edge indefinitely. Highly tempered steel doesn't act that way. It is temperamental and must be petted and smoothed down with a strop immediately before it is used.

This is interesting

Fine razors have edges of tiny invisible teeth. Temperature changes, jolts and handling get these teeth out of alignment. That's why a blade pulls. Stropping smoothes them into line and restores a keen cutting edge.

A few turns on Twinplex puts an edge on a NEW blade that is a marvel for smooth shaving. And it's so easy to strop with Twinplex. No fussing—no reversing blade. Just slip blade in and turn—strops both edges at once and reverses blade at every turn, just as a barber does. You can't fail.

30 seconds a day will keep one blade marvelously keen, for weeks of the smoothest shaves you've ever known. Shaving is also easier and quicker with Twinplex, for a keen blade is a quick, safe shaver.

You can now buy a Twinplex at any dealer's for as little as $2.50. It pays for itself in a few months and saves more than its cost each year thereafter. Other attractive Twinplex models at $3.50 and $5.00.

Send for the DULL HOUSE and FREE NEW blade stropped

Clever little Dull House solves the problem of disposing of old blades safely. Send 10c for it and we will also send you, FREE, one brand NEW blade stropped on Twinplex, and specially packed to protect it. You will get from it a new idea of what a real shave is. Name your razor.

TWINPLEX SALES CO.
1600 Locust Street, Saint Louis
Chicago - Montreal - London

Twinplex Stropper

when it isn't! And he'd go out, only to come back the next week to sit and watch us again. Then, one day, he changed his formula:

"'Willie,' he said, 'could you use a little money?'

"Could a one-legged man use a wooden leg? I'd have kissed the old man when he handed me a check for six thousand dollars—only he wasn't that kind of grandfather.

"With our new capital, we began to branch out. We bought a seat on the Boston Stock Exchange for Webber—the one I had promised him—and we took my brother Charlie into the firm. I don't remember that he put anything in in the way of capital, but we agreed to split the profits three ways." W. A. looked up over his glasses with a twinkle in his eyes. "It wasn't too much," he laughed. "It wasn't too much!"

That is a characterization which might apply to most of the new firm's activities during the thirteen years that intervened between its founding and the cataclysmic panic of 1893.

ITS first "big" transaction was in Boston and Lowell railroad stock. That ambitious corporation had built a million-dollar terminal to take care of twenty miles of traffic; an action which sent its shares from a five-hundred-dollar par to a ninety asked, and nothing bid. W. A. and his associates figured that the men who owned the road must be intending to lengthen the lines to fit the terminal, which was, of course, their plan. The firm plunged on a hundred shares at ninety—and sold them a little later at two hundred and forty, a profit of nine thousand dollars.

But, on the whole, thirteen years passed without unusual outward promise of success.

But Paine was not worried. He knew what he wanted to do, and he was doing it all the time At the bank, he had given himself to learning instead of to earning. In his own business, he concentrated on making friends instead of making profits. And when the smash of '93 came along, he was ready for it.

"We were hard hit," said W. A., "just as everybody was. We saw all our earnings go and some of our capital. A good many people thought we ought to quit. My partner, Webber, decided there was more hope of success in other fields. But Charlie and I decided to keep up the fight. It has always been my idea that anyone who can pay fifty cents on the dollar should go on. And when the pinch came, I was able to persuade our creditors to agree with me.

"We had spent thirteen years gaining people's confidence and developing resources for just such a struggle; and when it came victory was not so difficult for us as it was for many richer concerns."

In the revival of business that followed the panic, William A. Paine came into his own. His courage in the face of disaster, and his skill in earning back the ground that had been swept from under him, impressed the New England mind. The firm's business steadily increased. Its success as a banking and brokerage house of the conventional Boston sort was now assured. So, W. A. began to look around for new ways of business-building. And naturally, being a Bostonian, his mind turned to "coppers."

The four greatest words in the annals of New England are: Concord and Lexington, and Calumet and Hecla. The first two made New England history; and the last two made New England fortunes. By a singular trick of fate, Boston, the most Eastern of our financial capitals, became the center of Western copper mining speculation and investment. Long before copper shares were dealt in on the New York Exchange, they had become the chief activity of the Boston market. W. A. had bought and sold thousands of shares of copper stock for other people. And, in the years following the battle of '93, he began studying the business for himself.

They tell a story, in the copper country, of W. A.'s first contact with the Michigan mining interests that is typical of the way he sweeps through the less important things of life to get down to the really important problem of what he wants to do, and how he is going to do it. When he arrived in Michigan, someone gave him a dinner to which all the big mine owners were invited. Each one made a speech of welcome which developed before the speaker was half through into a back-handed selling talk for his own mine. When W. A. rose to reply, he thanked his hosts for his dinner and his good time, and then he asked permission to tell a story which seemed to him apropos.

"A certain church in a poor English parish needed hymn books, but had no money with which to buy them. Finally, a letter arrived from a well-known manufacturer offering to furnish the books without charge, if he might insert here and there an advertisement of his product. The offer was joyfully accepted. The books arrived. But on the first Sunday morning when the congregation rose to sing their favorite hymn, they read:

"Hark! the herald angels sing
Beecham's Pills are just the thing;
Peace on earth and mercy mild,
Two for man and one for child."

For the balance of the evening, it wasn't necessary to read between the lines to find out what these copper men were talking about. They got right down to business.

COPPER Range Consolidated is the outgrowth of that evening's discussion.

"Right now," he said, "we are having some slow years in the copper business. Our companies have felt the depression along with the rest. Felt it in immediate profits, I mean, and dividends. But not at the bank—for the simple reason that we did not pay out all our profits in the big years, but rolled up a surplus that will make us very comfortable until the next big copper period begins."

"That was one of the things you learned doing odd jobs at the Blackstone Bank?"

W. A. smiled at me over his glasses; and then, with a sudden seriousness, replied:

"Yes. And it is one thing that every young man *must* learn if he hopes to accomplish on a firm basis the thing which he most wants to do."

The finality of that statement was

unmistakable. He had already told me how he began, by knowing what he wanted to do. He had given me more than one glimpse of the steps by which he had done it. And now in another one of his crisp, robust sentences, he had given me his secret of making that accomplishment a permanent and satisfying thing.

It is difficult to compress the crowded career of a man like William A. Paine into a single magazine story. It is even more difficult to state the secret of his power in a single paragraph. Perhaps he has done the job fairly well in his own motto: "Know what you want to do. Then, do it." But there is behind this staccato phrasing a group of qualities which are not always found in a man of action.

One of these qualities is patience. William A. Paine spent eight years "doing odd jobs" to learn the mechanics of the thing he wanted to do. He spent thirteen years building the friendships which enabled him to do that thing in a big way. He was not too proud to work and wait.

Another quality is loyalty. There was only one clerk in that first Congress Street office. He stayed with the firm until he died. His younger brother is now a partner in the giant business of Paine, Webber and Company. On the walls of W. A.'s office in Boston are the portraits of eleven young men, all of them members of the firm, all of them—with one exception—graduates from W. A.'s own office staff. In other words, he is sharing his prosperity, freely and generously, with the men who helped him to achieve it.

And William A. Paine is modest. A few years ago he decided that he had worked long enough. He had tasted the pleasures of Southern winters. He was president of a golf club up on the North Shore, and had begun to look with longing on outdoor Northern summers. About this time, word reached him that someone had said that William A. Paine had "one foot in the grave." That was enough. He put up his golf clubs and canceled his reservations at Belleair. He began getting to the office before any of his partners and most of his clerks. And since that date has more than doubled his business. Not that W. A. is without pride. But he is essentially a modest man. He believes in publicity for business, but not for business men.

RIGHT now, there's a building going up in down-town Boston which covers an entire city block. It is the largest and highest and perhaps the finest privately owned structure in New England. The papers are making a good deal of fuss over it. The public is fully informed as to the names of the architects and construction companies and renting agents. But the only thing the public doesn't know—and never would know if W. A. had his wish about it—is the name of the man who *owns* it.

W. A. has been doing business that way for more than fifty years. He thinks it is a good way to do business. He ought to. It has made him powerful and rich.

The big new building is a good example of the way William A. Paine has consistently applied his "know-what-you-want-to-do" principle to his own business life. He isn't by profession a real estate operator. He's a banker. But every

Digitized by Google Original from UNIVERSITY OF IOWA

noon, as he walked from his office in the Shawmut Bank Building to his luncheon table at the Exchange Club, he saw in the distance the "unimproved" corner of Broad and Franklin, and he saw the crowded financial district edging gradually and inevitably toward that corner. He bought a small lot of land; then another lot; and another; until he owned the whole block.

Call it consistency. Call it purposefulness. Call it knowing what you want to do, and then doing it. Call it what you will. That's W. A. That's his way of doing business. That's how he built Paine, Webber and Company from a one-room brokerage office into a national institution, and Copper Range Consolidated from a hope into a fortune. That's why—after starting as an errand boy at five dollars a week—he is president and principal owner of both organizations, one of the highest powered and least exploited of our major financial magnates!

TWELVE YEARS AGO two young Cleveland real estate men—O. P. and M. J. Van Sweringen—bought a single-track, run-down railroad; a "joke" railroad. Today these two brothers have become the most powerful and astonishing individual figures in present-day American railroading. How did they do it? Next month we'll page John J. Bernet, a hard-boiled ex-blacksmith railroad executive, and from his story you will get a part answer to this question. "Who Said the Day of Railroad Giants Was Over?" is its title.

Back Up Now and Then—You May Get a Better Start

(*Continued from page 31*)

without eagerness. He talks in deliberate fashion, weighing his words and fitting each to its exact purpose. It was only when he began to speak of his own life and motives that his deliberation vanished.

Through the remarkable story of the formation of his first bank, I followed, and then I asked:

"But how could you do it? It must have been almost impossible for you three to start a bank."

"It wasn't so difficult," he contradicted. "Everybody knew we were hard-working boys, and you must remember that the South looked to her young men for her future."

Spartanburg knew not only William Adger Law but the other Laws as well. There were eleven of the Law children, and William was the first-born. The small brick house that sheltered them stood next to the church where Thomas Hart Law preached on Sundays to a congregation that then numbered less than a hundred.

"My father," said Law, with the suspicion of a twinkle in his eyes, "was of Scotch descent, *and* a minister, *and* he had been educated at a military academy.

SUCCESS—
Will You Pay the Price?

IF you are normal, you want the comforts and luxuries which are the by-products of success—a home of your own—a new car—the leisure to read—the means to travel.

You want these things very much.

But—you are keen enough to perceive that experience and facility in handling *routine* work will never get them for you.

What, then, are you doing to gain that *specialized* experience—that *trained* ability—for which business firms are willing to pay real money?

* * *

During the past nineteen years more than 625,000 men have found the answer to that question in home-study training under the LaSalle Problem Method.

Evening after evening, they have seated themselves, to all intents and purposes, at the desks of men in high-salaried positions, and have squarely faced the *problems* of those positions.

Evening after evening, they have been shown the *principles* involved in the solution of such problems—and how those principles are applied by highly successful business houses.

Evening after evening, they have tackled concrete problems, lifted bodily from business life, and under the direction of some of the ablest men in their respective fields *have worked those problems out for themselves.*

That they have been *well rewarded* for their foresight and their earnestness is shown by the fact that during only six months' time as many as 1,248 LaSalle members reported salary increases totaling $1,399,507—*an average increase per man of 89%.*

* * *

Many men, *knowing* what home-study training under the LaSalle Problem Method can do for them, nevertheless prefer to think that there's "nothing in it." That's the excuse they make for their futures.

If you—knowing these facts—are content to drift, you will not profit by reading further.

If on the other hand you have imagination enough to *visualize* your goal—to actually see yourself in a home of your own, enjoying the comforts and luxuries of life—if, in short, you are a man of *purpose*, the coupon below may shorten your journey to success by many years.

Note, please, that the coupon outlines different lines of training and that it will bring you full particulars of the training which appeals to you, together with your copy of that most inspiring book, "Ten Years' Promotion in One"—all without obligation.

If you want success, and are willing to pay the price, ACT!

LaSalle Extension University

THE WORLD'S LARGEST BUSINESS TRAINING INSTITUTION

You can see that our life at home would be a serious, well-regulated affair. We were all busy, but life was not all work. We boys swam in the little river, we rode the horses on my grandfather's place, in hunting season we carried our guns and followed the dogs and brought home our game. We knew our countryside.

"We were a very intimate family. We were all interested in one another. My father and mother were profoundly concerned about us; my mother in particular made an intensive study of each of her children. And she was our confidant."

THERE must have been something unusual about that Law family, for when I began on the work for this article I consulted "Who's Who in America." Of the seven persons of the name of Law listed there, four were of this immediate household. It is not unusual to find two brothers in "Who's Who" or a father and son, but four members of one family is remarkable. I asked Law to account for it.

He was decidedly uneasy.

"We are there," he agreed. "Father, at the time of his death, was serving as stated clerk of the General Assembly of the Presbyterian Church. One brother, Robert Adger Law, is professor of English at the University of Texas; another brother, John Adger Law, is president of the Central National Bank of Spartanburg and of two cotton mills at the same place. I don't want to brag about my parents, but it has always seemed to me that we had a distinct advantage in living in a minister's household. *You see, Father and Mother lived their ideals.*"

In that short tribute, it seems to me, Law found a complete explanation.

When William Adger Law was fourteen, he decided that it was time he earned some money. The janitor of the church had left, and without his father's knowledge the boy went to the board of deacons and asked for the job. He was elected, at four dollars a month. For this sum he sawed the wood for winter fires, kept them going, washed windows and swept the church, pumped the organ and rang the bells for Sunday service and Wednesday prayer meeting. Afterward, when he went to college, he borrowed some money.

While he was at college, he and three other boys decided to study shorthand. They sent for the books and dictated to each other. In two years they had mastered the subject. When they were graduated Law took the first job that offered, that of school-teacher. He taught one year, then passed the competitive examination and became court stenographer.

"That was a well-paid job," he said, "and I soon returned what I owed and began to save money. The vacations were long, and to fill in I got a job at selling life insurance. I liked that work, and I sent for all the books I could get upon the subject and studied it thoroughly. As I have always been a frugal person, I put away most of the money I earned."

Then, one day, a new bank was proposed in Spartanburg. The citizens were interested, the bank was much needed. Law believed in the future of the town. He saw that industry was increasing, and he took all his savings, which totaled five thousand dollars, and subscribed to the stock. The amount caused a mild sensation; none of the people concerned in the bank had supposed he had anything like that sum of money. They decided to make him a director. This unexpected appointment startled Law. But he took it seriously. In the two years of his directorship he studied the bank, its needs and possibilities. Then he decided to give up his courtroom job in order to devote his whole time to banking. This meant giving up a sure thing for an uncertainty.

Law told me:

"When I started in to play the game of business, I acted upon the first rule of sport or business, for the rules of a good sportsman and of a good business man are identical. The first is to sacrifice advantage already gained for the greater advantage yet to come."

That young Law's first venture was justified is demonstrated by the fact that this bank, under another title, prospers today.

"Our first home," he said, "was located on the corner of Main and Jail streets and the jail was in plain sight, in case any one of us was tempted to go wrong. For a long time the town knew us as the 'Pin-hook bank.'"

If any city dweller fails to understand that characterization, I might explain that it originated from the fact that in the country the youngsters who cannot afford fish hooks use bent pins, on which they place their bait. Often they catch as good fish as the anglers with regular hooks. The "pin-hook bank" succeeded. In two years it had grown to a point where it was possible to organize a national bank in conjunction with it. Afterward the two merged into one, which was called the Central National Bank of Spartanburg. Law had now achieved the advantage for which he had sacrificed his security. His bank was successful. Just before starting it, he had married Lucy Lathrop Goode, of Americus, Georgia, and they settled in Spartanburg. For twelve years life flowed pleasantly on. The bank grew and prospered. John Law left to go into the textile manufacturing business.

WILLIAM LAW began to travel in the interest of his bank. As its business extended, it was necessary for him to visit the greater cities. In time, came the second call to sacrifice security for what Law calls a new place on the team.

This sacrifice was a very real and vital one. When I went to Philadelphia to write this story, every man with whom I talked had something to say about it. "He was president of a bank," ran the admiring chorus, "and he came here and began all over as assistant cashier."

"That move was the most significant of my business life," said Law. "When the proposition was made to me it was a shock. I had been expecting an offer: one of the officers of the bank had sounded me out on the matter some time before. My wife and I had talked it over and she was willing to move to the unknown city. But when the offer came, and it was only an assistant cashiership, it gave us pause. Finally, I said:

"It really doesn't matter what they *call* me."

Those were brave words, words his wife and children needed to sustain them in the wrench of parting from the home and associations of a lifetime. The Laws were a part of Spartanburg; everybody knew and loved them. All the adjustments of life were nicely made, their position was established. The family of an assistant cashier in the city of Philadelphia would have no particular social place. And there was nothing to boast about to the home folks. Certain citizens in Spartanburg thought and said in plain English that Bill Law was a blamed fool to leave a good bank like that for a picayune job.

Yet the Laws went. William Adger Law entered upon his assistant cashiership. Resolutely he set himself to move upward. He did this, not by self-assertion, but by quiet industry and by calling to his service every bit of his native ability. Gradually his ability was recognized, then promotions began and came faster and faster. At the end of seven years, Law was president of the Merchants' National Bank of Philadelphia.

FOR the second time Law had justified his belief that it is often the part of wisdom to sacrifice advantage already gained for a greater advantage yet to come. Within that year he was to be called upon to follow his rule a third time. The Merchants' National Bank and the First National Bank of Philadelphia arranged a merger. Law was a new president, the older and more experienced officer of the larger bank would naturally take precedence.

"This time," said Law, "the sacrifice was of title. And that would seem hardly worth mentioning, except that there are so many poor sportsmen who refuse to surrender anything. In those years I spent in banking I have served as a member of many committees appointed to reorganize concerns that had got into difficulties.

"Very often the remedy for the situation was a merger that combined two concerns, a merger that was obviously in the interest of economy, efficiency, and safety. Immediately we ran up against opposition. The men who headed the companies concerned had cherished plans of their own; they were loath to give them up.

"In many cases we were blocked because an official would not consent to forgo his title. If two companies are to join, one president has to yield and become a vice president; but often we found that neither of the two men would consider changing his office. They were in a tight place in the game; it was up to them to sacrifice.

"Every man who works fixes his own compensation, within the limits of his abilities and his energy. If, in the interest of his company or of his own future, he lets titles and compensation go for a time, he will get them back as surely as he lives and works."

Law quickly proved the practicability of this theory. In five years, he was president of the combined banks. Under his guidance, the First National grew to be one of the biggest banks in the city of Philadelphia. Law was entirely happy.

"There were two things that made me so," he said. "First, the fact that I could work with so many worth-while people. The second thing was the romantic nature of the work itself. Often I was in a position to see what were almost miracles.

As amazing as it is NEW ROGERS "Vogue" finish

You'd think it was a coating of jewel dust—so brilliant—so scintillating—like the sparkling hues of countless diamonds, emeralds, rubies and sapphires, flashing in the sunlight.

It is the new Rogers "Vogue" finish—the latest and most thrilling idea in artistic lacquer treatment for new and old tables, desks, bookcases, lamps, smoking stands, bookracks, etc. The effect is amazing. Yet to produce it is very, very easy. Complete directions come with every can.

Simply lacquer the piece with a beautiful Rogers color. Half an hour later apply the new "Vogue" finish. Many exquisite variations are possible. Merely follow the directions. No experience is needed. Anyone can do it. Like "Rogers," the new "Vogue" finish—

"Dries While You Wait." Dries smooth and hard. Dries free from dust. Dries to a tough, durable surface that wears and *wears* and WEARS. You will be more than delighted with it.

26 Rogers Colors

Rogers Brushing Lacquer comes in 26 exquisite standard colors, also black, white and clear. In addition there are the four new Vogue finishes—Platinum Tone, Sun Glow, Fairy Green and Fire Glow.

See your Rogers dealer today. He is the only one who carries the new "Vogue" finishes. You can tell the genuine by the name "Rogers" and the distinctive *oriental* can. Rogers Lacquers and Vogue finishes are always sold with our "Money-Back" Guaranty.

Ben Franklin's back was cold

TIRED of scorching his face and freezing his heels, and alternately warming his back and chilling his front, Benjamin Franklin in 1742 invented his Pennsylvania stove. A biographer calls it one of the first contrivances to give the American home the civilizing comfort marvelled at by the world.

But comfort was not all that Franklin aimed at. The difference in economy alone, he pointed out, "between the English farmer in America who makes great fires in open chimneys . . . and the German who burns his fuel in a stove . . . shall in a course of years enable the German to buy out the Englishman and take possession of his plantation."

Today's most modern development in the art of heating gives in highest degree exactly the benefits sought by Franklin. Comfort and economy, *certified*, are the outstanding advantages of *Capitol Guaranteed Heating*.*

This is a binding warranty given with every Capitol boiler before it is installed, specifying the exact number of radiators which it will satisfactorily heat. Automatically, this guarantee selects the right size boiler for your home.

There is no guessing or wondering about whether it will be big enough. No worry about whether money will be needlessly spent on one too large. For annoying uncertainty is substituted scientific assurance of thrifty, healthy, economical warmth.

Consult a good contractor about the many superiorities of Capitol boilers; round, square, or smokeless. An interesting, illustrated book, "A Modern House Warming," is free. Write for it.

* **Guaranteed Heating.** *Your contractor receives a written guarantee on the heating capacity of every Capitol boiler. No other heating equipment assures you satisfaction so definitely.*

UNITED STATES RADIATOR CORPORATION-DETROIT, MICHIGAN

6 Factories and 32 Assembling Plants

For 38 years, builders of dependable heating equipment

The **Pacific Steel Boiler Corporation**, Division of the United States Radiator Corporation, builds welded steel heating boilers for large installations —business buildings, factories, schools, hotels, and large apartments.

Guaranteed Heating WITH

Capitol Boilers

AND RADIATORS

Original from UNIVERSITY OF IOWA

"I've worked through three financial crises: 1907, 1914, and 1921. If there is anything more interesting than a crisis, it is the reconstruction work that follows. The old-time banker who used to help kill a failing business by forcing it into bankruptcy, is almost extinct. To-day the banker's business is to save and to rebuild. He knows that bankruptcy is the last resort. He saves and rebuilds just as often as he can.

"One of the most interesting jobs I ever had was managing a lead mine in Arizona. I knew nothing about lead mines, but the man who owned this one owed our bank a lot of money and the mine was one of his biggest assets.

"For two years I supervised that mine, visiting it frequently, conferring and advising. Eventually I helped to get it going to a point where it made large earnings. Everybody was happy, and the debt was paid off.

"In like instances, I have helped to manage dozens of other businesses.

"In the ten years since the war, I have seen more than twenty men among my close friends each build up a business that has made him a millionaire.

"To watch these twenty men develop, to coöperate with them, to see them meet punishment and take it, make sacrifices, adjust themselves to changing conditions, to watch them reef their sails and spread them again, meet crisis after crisis and come through, why, there isn't a sport on earth that surpasses it!

"The men who are in the big game up to their necks know that there is no other game more satisfying, or that gives a deeper thrill. That is the reason why Americans generally go on working beyond the age when men in other countries retire, go on until they die in harness. They keep it up, not in order to pile up more money, not because they would not enjoy leisure, but because the business game attracts them more than any other game.

"LET me tell you the story of one of the twenty millionaires I mentioned a moment ago. This man owned a department store. After many years of fair success, he failed. When the creditors had been paid, there was nothing left. But for years he had held an outside position as officer in a small manufacturing company, and this office paid a salary of twelve thousand a year. He was fifty-five years old, and all his friends agreed it was fortunate that at his age he should have this twelve thousand to keep him in comfort. A short time after everything had been settled, he called upon me. I referred to the job he still held, and he smiled.

"'But I have decided to resign that place,' he said. 'I am going to try to raise two hundred thousand and go into a new business. It has taken me a long while to discover that I was never intended to be a merchant. I was intended to be an inventor and a manufacturer. I sold an article in my store which I made there in a small way. Now I have invented machinery which will enable me to sell it in a big way, and make my fortune.'

"Can you imagine how all this sounded to a banker who had just seen this man through a failure. I was amazed. Remember, he was fifty-five, and figure to yourself how hard it was for a man of that age who had just failed to interest anyone in a new proposition. But he did it! He had many friends, and from them he got the two hundred thousand, giving them preferred stock in his company and taking for himself only the common stock, representing prospects and good will. He started business, renting a part of a factory, and in a few years was selling his product throughout the country.

"He retired the preferred stock, enlarged his plant, and kept on. Today he is seventy-seven; he is hale and hearty; his business flourishes and he is rated a millionaire. He has been generous and wise with his fortune, and has shared it with others. In resigning that safe and certain twelve thousand a year for the hope of the future he believed he could make true, he showed himself a true sportsman.

"I'VE talked with you a good deal about sacrifice. The big game has other rules: the sense of fair play, the ability to be a good loser, frankness, and sincerity, the athletic instinct, the power to pinch-hit in a crisis. The acid test of a business man or of a firm or corporation is its ability to meet crises.

"Not so many years ago we had a bank catastrophe in this city. One Saturday at eleven o'clock a hold-up man came to the bank and threatened an officer, demanding one hundred thousand dollars, and waving a stick of dynamite. The officer refused; the hold-up man threw his stick of dynamite. It exploded. The officer was killed, the president, who stood just behind him, collapsed, several of the bank workers were seriously injured, and the interior of the bank was a wreckage of twisted bars, papers, and splintered wood. The cashier was a reserved young man, never in the limelight. He stepped forward, directed matters, sent the wounded away, and closed the bank. But he remained there.

"On Monday the bank opened to a crowd of anxious depositors who were concerned as to the safety of their securities. The cashier received them in a neat, orderly place with no sign of confusion. They were waited on, everything was running, apparently as before. Only the cashier was a bit white. And well he might be. He had not slept since Saturday, nor had he left the bank. He had ordered and supervised repairs, had called in help, had placed every record and paper in order. Today he is president of that bank. He is what I call a good pinch-hitter.

"When a banker in his daily life takes part in dramas such as I have told you, do you wonder that he calls the game of business romantic?"

It was with considerable reluctance that Law left his bank to become president of the Penn Mutual Life Insurance Company. In addition to the presidency of the First National, he had accepted certain directorships in various companies. There are directors and directors, but there are few like Law. As soon as he had accepted such a position, he began to get all the available information upon the company's business and its relation to business in general.

If he did not know the essentials of the particular business with which he found himself concerned, he sent for books upon the subject and settled down to make a comprehensive study of the entire field.

When he was made a trustee in the Penn Mutual, which is the equivalent of a directorship in another company, he began upon an intensive study of life insurance. He was a very active trustee.

A few years later the former president of the company, Mr. George K. Johnston, wished to retire, and Law was at once spoken of for president. But he demurred. He liked banking. The new offer meant more money and greater prestige, for the Penn Mutual is a great company, with half a million policy holders and an annual business totaling well over two hundred million. But to bring a new president from outside the organization to an old and well-established company might mean years of struggle against resentment. Finally, Law sent his ultimatum:

"If every officer in the company wants me to come and will say so, I'll come. But I am not going to take a place that will make me an executive in charge of men who do not want me."

When this reply was carried to the Penn Mutual, the officers of the company hastened to invite Law to come to them.

WHILE we were sitting talking in Law's office at the Penn Mutual Building, his secretary brought to him an old-fashioned oblong box. In it were certain treasured personal papers that have been kept in this one depository for thirty-five years. To the handle of the box is fastened a tag, a disreputable-looking, yellowed, worn tag with curled ends. On that tag is the name "William Adger Law," and beneath it

Assistant Cashier	Vice President
Cashier	President

In the course of his twenty-five years in Philadelphia, Law has had a number of secretaries, and in turn each has suggested the removal of the tag.

"Just try it," suggested one of them who is now a vice president in one of the city's big banks. "I tried once, and Law looked up:

"'I'd just leave that on,' he said.

"I figured that tag is Law's honor mention and red ribbon and blue ribbon in the game of business. For Law plays business as a sport. He doesn't crow when he wins and he doesn't squeal when he is licked, and he loves his game!"

NO ONE has to ask you twice "Who's Lindbergh?" But who were Alcock and Brown? Forgotten, have you? And yet, not many years ago, their names were headliners in every newspaper. They were the two men who made the first transatlantic airplane flight. Next month in "How Many of These Celebrities Do You Remember?" you'll have a wonderful opportunity to see how well the old memory works. You'll be surprised, too, to discover how transitory fame is. After you've gone through the various lists, try them out on your friends. You will be all set for an entertaining evening.

"The hot motor scorched my face"

"I am an aviator. Some time ago I had to make a forced landing in a Curtiss Boat . . . My face and chin came in contact with the hot motor. I was painfully burned. My mechanic recommended Unguentine. I got a tube and applied it. Relief was immediate. The burn healed rapidly, *completely*. From now on Unguentine will be in my tool kit."

* * *

With men of every calling, as with physicians and housewives, Unguentine is the standard modern surgical dressing for burns. Keep it at hand!

No matter how slight the burn, spread on Unguentine liberally. The pain is soothed at once. *You are spared the danger of terrible infection.* The wound heals rapidly, almost invariably *without a scar!*

Also for cuts, scratches and other injuries. In severe cases, bandage lightly. At your druggist's—50c. Keep a tube at your office or shop, as well as at home. The Norwich Pharmacal Company, Norwich, N. Y. Canada—193 Spadina Ave., Toronto.

The Things I Hate Most To Do

FIRST PRIZE

My Habit of Procrastinating Nearly Killed My Baby

I DON'T mind doing the other chores, but when it comes to milking—was there ever a red-blooded boy or man who liked to milk? I hated it worse than most fellows, and that is *bad*.

When I was a boy at home on my father's ranch, hundreds of cattle—feeders—were fattened each year in the feed lots. It was a joy to help care for those broad-backed beasts. But the family milch-cow, that gentle, submissive creature that existed merely to supply our table with dairy products, how it rankled in my soul when Father made me "milkmaid" to her!

It took about fifteen minutes each night and morning to milk that cow. I spent hours brooding over the job. The thought of it soured my disposition. Because of it, I was tempted at times to run away from home.

In due time I went away to college. I met Clare and we married and moved to Father's cattle ranch. At first we bought our dairy products from the grocer, as Clare had been used to doing.

Then the baby came. It was frail and Clare was not strong. The doctor said they must have pure, fresh milk from a tested, well-cared-for cow. Once again I turned "milkmaid." I hated the job worse than ever.

There was no Dad now to say, "Fall to, Jim, and get that milking done." I put off the task, dozing in my chair evenings until long after midnight; dallying with this and that mornings until nearly noon. Often I milked but once daily, and that only when my conscience and the bawling of the cow drove me to it. I allowed the milking of that cow to upset the whole scheme of my life.

Of course the baby got sick. What baby could keep well in hot weather on milk that was extracted at any hour of the day from a fretful, neglected cow? The nurse who was called reported my schedule of milking to the doctor.

Baby almost died. I reformed.

J. W. M.

SECOND PRIZE

It's Silly—But I Hate To Ask My Husband for Money

THE thing I hate most to do is ask my husband for money. This may seem absurd when a woman has a perfectly good, generous husband; but there is something innate, I believe, in women that makes them put off this unpleasant task. Happily, to-day men and women have a saner idea of the division of the family income than in years gone by. Women are learning to spend more wisely, homes are on a more substantial basis financially.

With all this new understanding, budget as I may, and plan ahead as I may, there seems to be no absolute getting away from asking for a little more money to tide over some unforeseen expenditure. When I realize the inevitable—that I must have a little more money—I always decide to get it over with as quickly as possible—but with the same result: I find myself procrastinating.

Monday morning, I decide to wait until Tuesday, because I know Monday is always a busy day for him in getting the week started. Tuesday, I find he must hurry off to meet a client. Wednesday, it seems best to wait until evening, but the evening finds him tired and my sympathy is aroused to the point of letting him rest in peace. Thursday is my busy day, so Friday will be soon enough. Suddenly I realize that on the next day there is no school, and I must have the money to do the shopping for the children. Remorse seizes me, for I promised the last time that I would never ask him on a few hours' notice to replenish my bank account. And now, after a week of thinking about it I finally tell my husband: "John, I must have a hundred dollars to-day; the boys need suits and the girls—" Always there is the same patient interruption: "But why didn't you tell me yesterday or the day before?" And always there is the same sad answer, "I just kept putting it off!"

H. T.

THIRD PRIZE

If Only Someone Would Do Away with Buttons

IT WOULDN'T be so bad if I were not considered a thrifty housekeeper. My neighbors have said: "*How* do you do it? Your household runs like clockwork, even to the smallest detail!" And I have smiled blandly and accepted the tribute, trying not to listen to that little imp of conscience whispering, "To the smallest detail, eh! But what about that stack of mending that's been waiting so long just to have the *buttons sewed on!*" There! Now it's out. If some good genius of household helps would just suggest a plan to do away with buttons!

From my earliest recollections, when I pinned my dollies' clothes, I have never sewed on a single button without inwardly rebelling. Each week, after I do the week's ironing and mending, the articles from which buttons have disappeared are laid away with a stack put by from the week before—yes, and the week before that—and I silence my conscience by telling myself that *sometime*, when I am feeling just right, I'll pitch in and sew on every button! But the days slip by, and I find something else to do every time the task confronts me.

What this has cost me in peace of mind only a good housekeeper can guess. So long as there's only Bill and me, I guess I'll manage to keep the buttons sewed on his shirts and underwear, but heaven help me when there are three or four kiddies, and little rompers and dresses that will need buttons sewed on *every week!* Will some kindly member of the "Aid to Housekeepers' Society" please offer a suggestion?

9 SECRETS *of* Success *in Running a* Drug Store

JOHN K. THOMPSON runs The Pendleton Drug Co. in Pendleton, Ore. And he is doing a sales volume today that averages around $5000 a month. Yet his store is located in a town of only 7,500 population—and in a county that has only 30,000 population, although its area is nearly three times that of the state of Rhode Island.

And in spite of the fact that Mr. Thompson's store is a night's ride from Portland, people in that distant city know about him and about his business. He's that kind of a retailer.

He Tells FARM & FIRESIDE

FARM & FIRESIDE heard about his merchandising methods and went out to get the story of his success.

And he has modestly and generously given FARM & FIRESIDE the details of his experience as a successful small-city druggist in an interview which is now published in a folder—a copy of which any dealer can obtain by returning the attached coupon.

His Merchandising Secrets

You'll want to know, for instance—What John K. Thompson's important *first* rule is that he lays down for his clerks—Why he carries 5 complete lines of toilet goods—Why he never cuts prices on nationally advertised goods—What he has found out about window display and local newspaper advertising tie-up—What he has discovered about the right way to run a kodak department—What it costs him to sell from a stock that includes over 5,600 items—What turnover he gets in his various departments—Why 90 per cent of his cosmetic sales are made to the wives and daughters of farmers—And so on.

Doubling Candy Sales

Also, if you sell candy you'll get a valuable tip about a radical change Mr. Thompson made in his candy department.

This department had been proving troublesome. Moreover, it wasn't paying a profit. Then a sharp change was decided on and carried through—and not only was the trouble stopped, but the department began showing a good profit. Since then its sales have *more than doubled* and are steadily increasing.

John K. Thompson, Successful Druggist of Pendleton, Ore., Tells FARM & FIRESIDE What He Has Done to Make His Business Grow

These are just a few of the high spots in his general retail experience that he tells about in his FARM & FIRESIDE interview—information that is interesting to any dealer in any line, regardless of what he sells.

Rendering VITAL Service

Another interesting point in his interview is where he tells how and why he tries to render service that's vital to the needs of his community:

"Every small-city store owes an obligation to the community that supports it," he says. "And we have tried from the first to make our store so indispensable to the people living within a radius of 60 miles *that they wouldn't want to be without the kind of service we give.*"

As an example of this service—learn how The Pendleton Drug Co. is prepared to meet any emergency that may arise in connection with contagious disease epidemics.

Another instance—when the ranchers of Umatilla County were losing thousands of dollars worth of wheat each year due to the ravages of a fungous disease that injured the grain — this progressive drug store kept in constant communication with Government experimental stations. And when word was flashed that a cure had been found, it was only a matter of hours before the store started trucks out through the ranch country loaded with the necessary chemical. And wheat was made disease-proof for seeding over 250,000 acres of land.

Send for this Folder

Send the attached coupon for the folder carrying John K. Thompson's interesting story of his successful business methods. Every small-city dealer is welcome to a copy. You assume no obligation in asking for it. It is free.

FARM & FIRESIDE'S Service to Small-City Retailers

This is another interview in FARM & FIRESIDE'S series—which makes available to retailers the tried and proven methods for building farm trade, as used by outstandingly successful merchants.

And this work is just a part of the service FARM & FIRESIDE renders in meeting the obligations of leadership in the farm field.

As every dealer knows, the advertisements in this magazine are a real force in influencing more than 1,200,000 farm families to buy. And a glance through any issue immediately shows why this is so—for here is a hundred-per-cent-*personal* magazine—edited straight to the *individual*—and read with *warmer interest* than any other farm publication.

That's why dealers are finding it so profitable to feature and push products advertised in FARM & FIRESIDE—and why manufacturers' advertising in this magazine shows such steady growth.

Have You a Dog? . . .
Have You a Dog Book?

An instructive and interesting dog book will be sent free on request. Explains dog diseases and symptoms, care, feeding, etc. Every dog owner should read this book.

...but, do you know when your dog is suffering?

IF you really understand your dog's needs, you know that he requires frequent medical care—to prevent, as well as to remedy, sickness. When you buy medicines to safeguard his health, choose the kind acknowledged as setting the world's highest standards for efficacy and safety.

For more than a half century the H. Clay Glover Company has pioneered in the study and treatment of dog ailments. We are sharing with the U. S. Government Drug Laws the responsibility of protecting the public against fraudulent medicines. Thus in the Glover standard lies your assurance that you are treating your dog as he deserves—with the best medicines that science can devise and technical skill compound.

DISTEMPER

There Are No Specific Drugs For Its Treatment or Prevention

We offer separate medicines which are scientifically recognized as being indicated for EACH of the SYMPTOMS of DISTEMPER — the only method for treating this disease approved by both the Veterinary Profession and the Government. A special explanatory pamphlet on Distemper will be mailed you upon request.

Dr. B. T. Woodward will personally advise you in any matter concerning kennel sanitation and the health, care and feeding of your dog. In writing be sure to give full particulars concerning the dog's age, breed, sex, symptoms, etc.

Chase Osborn, the Iron Hunter

(*Continued from page 16*)

petting had nothing on us. And the girls were more shy, but they were out to do anything that any flapper will do now. We sang songs and danced to them, and hugged the girls until they would often grunt as we swung them clean off the floor. One of the tunes was:

An' I danced with a gal with a hole in her stockin',
An' her knees kep' a-knockin',
An' her toes kep' a-rockin'—
The purtiest gal that roams.

And:

Higher up the cherry tree the sweeter grows the cherry;
The more you hug and kiss the gals, the sooner they will marry."

Yet it was the lack of clothes that ended Chase's college days.

"One night, at the end of my third year, I attended a commencement reception at President White's home," he said. "Several of the young men actually wore evening dress suits. I had never seen one before, and the mental effect they had on me was as strange as it was ludicrous. All along I had been struggling to get far enough into style to wear an undershirt, and here were these clawhammer coats. The case was hopeless; the odds were too terrible to struggle against. Then and there I vowed to leave school for good, and I did. I was seventeen."

SHORTLY after leaving Purdue, Chase did a thing which impelled him to quit Indiana, a thing of which today he is heartily ashamed, though it, too, was evidence of his individuality and his fighting courage.

A man named Rawles had warned Chase to stay out of his bailiwick, a section called Hebron near Lafayette, on threat of a walloping. Nevertheless, stubborn Chase went one Sunday night to Hebron church. Rawles called him a name and promised him a licking when church was out. "I didn't wait until after church," tells Mr. Osborn, "but waded into Rawles then and there. I struck him in the face, and before he could recover from the surprise and the blow, I climbed over the seat and grabbed him. We had a fine fight. Naturally, the church was in an uproar in a minute. Women and girls screamed, but there wasn't many fainting Hoosier women those days.

"Men got to us and pulled us out into the aisle. Then it seemed to me the tide of battle turned. I had been getting all the best of it among the seats. Now, half a dozen men were holding me, and it seemed to me that no one was holding Rawles. He pounded away at me and my arms were pinioned. When they thought I had enough, for I was blind and delirious with fighting rage, they faced me about and threw me out of church. I ran as fast as I could to Doc Coleman's, the nearest farmer I knew, and tried to borrow his shotgun in order to go back to get even. Of course he refused it."

Right there Chase Osborn acquired a reputation in Lafayette that it took half a life to live down. Horrified parents ordered their sons and daughters to ostracize this young rascal. A couple of years later, Lafayette people, reading a mistaken report in a Chicago newspaper that Chase Osborn had been arrested for murder in Milwaukee, nodded their heads knowingly and said: "I told you so." Thirty-five years later, when Mr. Osborn had been elected governor of Michigan, and came to Indiana as a guest of honor of the state, an old immigrant gentleman exclaimed in astonishment:

"Is dis der real Chase Osborn? Vat, ain't you hung yet?"

YOUNG Osborn fixed his eye on Chicago. He tried to travel thither by the side-door Pullman, but a brakeman threw him off, so he walked. Landing penniless in the whirlpool of Chicago, he worked as second cook in a fifteen-cent restaurant and as errand boy to the city editor of the Chicago "Tribune." Then, thrown out of a job, he hiked north, handled a pick and shovel in a railroad construction gang, drove a coal wagon, and finally landed as subscription solicitor on the Milwaukee "Chronicle." From that he was graduated into a cub reporter.

"On the 'Chronicle'" he said, "I developed a real nose for news, and almost every day I scooped our prosperous rival, the 'Evening Wisconsin.' But the 'Chronicle' was in a terrible pickle. My salary was supposed to be seven dollars a week. At first I got part of it, just enough to keep body and soul together by aid of a free-lunch counter across the street. Then my pay stopped altogether. Finally, one day the manager sent me over to the pawn shop to hock his wife's earrings to pay the printer!"

But just at this desperate juncture an offer came to young Osborn from the rival paper. Twelve dollars a week! That would have been good newspaper wages in Chicago then. In Milwaukee it was magnificent.

Osborn became the outstanding reporter of Milwaukee. "I always ran to my assignments, never walked," he told me. "That saved hack fare, and I usually beat my rivals who rode in hacks." He tracked down an escaped murderer, refused the reward, and was given a public dinner by the sheriff, who discovered that a few months before Osborn had been working as a stevedore in his lumber yard. He dug up a sensational story concerning the chairman of the county board of supervisors. The chairman threatened to shoot Osborn on sight. "It was against the law to carry concealed weapons, so the judge of the municipal court gave me an authorization to carry a hatchet in my belt for protection," Osborn narrates. "I was scared, but I meditated how I would scalp the cuss if he attacked me. One couldn't do that with a cowardly revolver. I have always thought of a hatchet or an ax as being an honorable American weapon, the equal of the scythe, with which Lincoln promised to cut off the legs of a fellow who challenged him to fight a duel."

The picture of young Osborn running along Milwaukee streets, hair flying, dark

Digitized by Google
Original from UNIVERSITY OF IOWA

brown eyes blazing, hatchet swinging in his belt, is a measure of the individuality that has set this man apart all his life.

Then came a bigger opportunity—one that tested still further his enterprise and courage:

Up in the wilds of the Wisconsin woods was a mining town named Florence, which needed a young newspaper man to fight a gang of ruffians that had terrorized the community. The gang had scared the former editor out of town. There was a chance for a nervy youngster to buy the newspaper and lead the forces of decency against the gangsters. Osborn jumped at the chance. At twenty-one he had married his sweetheart, a girl of eighteen, and had taken her for a honeymoon ride on a horse car. Now he was father of a child, and his total fortune amounted to eighty dollars. He borrowed twenty-five hundred dollars and started North with wife and child.

Reaching Florence, he found a terrific situation. Open gambling and prostitution and pistol fighting on the streets, and the sheriff and district attorney the tools of the gangsters. The night of Osborn's arrival, the toughs shot out the windows of his newspaper shop and the leg off one of his job presses, just as a little intimation to him to be "good." But Osborn refused to be "good." He equipped his print-shop force with repeating rifles, and called a mass meeting of the decent citizens. Finding a strong element willing to be led, he determined to get the spineless district attorney removed in favor of someone fearless enough to prosecute the lawbreakers.

He set out for the state capital. The gang decided that he must not achieve his purpose. They sent false telegrams for his arrest. They pursued him in rigs and on horseback. They held him up on a dark road at the point of guns, dragged him into a town, and locked him up. But he broke free and, evading other tricks and traps, got out of the woods at last, reached the governor, who listened to his story, removed the corrupt district attorney, and appointed another, who fought with Osborn till they had the gang on the run.

At the end of a year, so vigorous was young Osborn's editorship, so strongly did he enlist the better element behind his paper, that he had paid for it and repaid all the money he had borrowed. At the end of three years, he sold out and had $10,000 cash in hand.

Here is where the individuality of this man Osborn stood forth again.

HE HAD proved that he could run a newspaper. He had won against bitter odds. He was only twenty-five years old and $10,000 was a lot of money in those days. According to the copy-book maxims, he should have stuck to his last, and, no doubt, if he had confined his energies to newspaper work, he would have gone on to a more distinguished success in that field. He did, in fact, edit and own and manage other newspapers in other towns of the North. But even the management of a newspaper in a growing country was not sufficient to occupy his energy and satisfy his craving for action.

There was a bigger thing—iron. The ranges of upper Michigan were just being discovered and exploited, and the whole North country was iron mad. Curiosity

"Just notice the fine skins of men who use WILLIAMS!"

The Cream that *leaves* FACES FIT!

"Leaves Faces Fit?" Certainly. Why not? It ought to. Eighty-eight years of specialized study of what is best for beard and skin have gone into its making.

Its lather is quick and thick. It prepares both skin and beard so perfectly that the razor's work is made as easy and smooth as a razor's work can be.

It will not turn a dull blade sharp. You could not use it satisfactorily with a jackknife. But it makes dull blades *seem* less dull, and sharp blades sharper.

And super mild, (yes, just that, *super* mild) it soothes while it softens; freshens facial tissues; gently, thoroughly cleanses facial pores. *Leaves Faces Fit!*

Ask the drug clerk. He'll tell you, "Oh, yes, sometimes they change . . . .
. . . . *but they all come back to Williams!"*

The J. B. Williams Company, Glastonbury, Conn.—Montreal, Canada.

Next time say

"Williams Shaving Cream *please!"*

Then—a dash of AQUA VELVA! Made for after-shaving. *Keeps* the face Fit all day.

California, the American Riviera

Don't you hear the West a-calling?

Calling you who have been there before and you who have yet to sense its bewitching charm. The Union Pacific West calls you to a vacation that will live forever in your memory, to the most stupendous, wonderful and beautiful things to see on earth!

Geysers hurling columns of boiling spray hundreds of feet skyward, waterfalls with sheer drops of half a mile—mountains, thousands of them thrusting bediamonded peaks from green forests high into cloudless skies. Canyons of bewildering grandeur, filled with gigantic architecture of stone painted with all the colors imaginable! Trees, forests-full, of surpassingly big trees that were saplings 5,000 years ago!

Motor trails along the seashore, to the heights, to mountain lakes and streams, cool valleys, luxurious but inexpensive highland chalets far from modern smoke and hustle.

And don't forget the cities—they're different too. Denver, the mile high Queen City of the plains; Ogden; Salt Lake City, capital of the Mormons; Portland, the Rose City; Seattle and Tacoma on lovely Puget Sound; San Francisco by the Golden Gate; Los Angeles, the metropolis of the movies—each with its individual atmosphere and charm.

Come out into the West this summer—the West of recreation, romance, adventure, mystery, and you will never again be satisfied until you return. And it's not expensive on a low cost independent or Escorted All-Expense Union Pacific tour.

UNION PACIFIC

THE OVERLAND ROUTE

had led Osborn out with men in search for iron. He learned the lore of the woods, taught himself economic geology, and became known as an iron expert.

With a pack on his back and a pick in his hand, he hit out through the untracked forest, sometimes with an Indian guide, sometimes alone. First through the forests of northern Michigan, then across the St. Mary's River into the wilder reaches of Canada. He had many disappointments, but finally his knowledge and persistence were rewarded. He discovered a veritable mountain of iron—the famous Moose Mountain. He acquired title to it, sought financial help of Chicago capitalists, got it, and ultimately sold out his share of the property for a fortune.

That established for years a ruling theme in his life.

Iron!

He ranged the world for iron—over the tundras of Lapland, through the mountains of Central China, into the jungles of Madagascar and Brazil. Iron fascinated him by its interpenetration into the lives of men. "Our life is ticked off by springs of iron ore in watch and clock," he writes in his autobiography. "Ocean steamships made of iron ore throb with a life that is more than artificial. Giant cranes, made from iron ore, move about in Gargantuan majesty. Into cannon and the surgeon's knife enter iron ore. One can look nowhere and think nowhere without encountering manifestations of iron ore. Let those who produce it hold up their heads with dignity and walk erect among men. They gave to it their lives that it may serve mankind."

BUT no one theme can for long dominate a man as keen about all phases of life as Chase Osborn.

He has been in politics, tooth and nail, from county "corkis" up to governor's chair. But he is not a politician. He has rather a distaste for politics. He despises its machinations and intrigues. Politics has been merely at certain times an outlet for his fighting energies.

Out of his newspaper days he has brought the virile journalistic style that enlivens the five books he has found time to write. Had he written all the books he has in his head, he would have a five-foot shelf to his credit. He spouts writing ideas like a geyser. In contact with him, a novelist or a poet or a writer of short stories or of articles could pick up themes, one a minute. It was he who gave his friend Emerson Hough both the idea and the title for "The Covered Wagon."

At sixty-eight, he has today more pep than half a dozen ordinary men. A life outdoors has given him the constitution of an ox.

He is as much at home with a dock-walloper as with an Egyptologist, but he is most at his ease with children, for he is himself a child. He has kept the curiosity about all things which is the precious gift of youth, but which most men and women lose as they creep on into middle life.

I have had many amazing proofs of that curiosity:

A few months ago, Chase Osborn came to visit us at our farm in the Connecticut hills, fifty miles from New York, one of the few localities of the world on which he had never set foot. That night

Digitized by Google Original from UNIVERSITY OF IOWA

he fascinated a group of our friends till midnight with imitations of Central African dialects, with his original theories of earthquakes, and with stories of Georgia crackers, and of tiger hunting in Burma. "That cat catapulted as only a cat can pult," I remember he said of one tiger encounter. When we went to bed we told him that breakfast would be at seven or eight, or whenever he wished it. He replied that he might sleep late, for he had been up the night before till almost two.

In the morning we waited breakfast from eight till nine. We heard no sound. At last I ventured up to his room. I knocked. No answer. I peered in. Bed empty!

Still we waited. At nine-thirty we heard a war whoop. Out of the woods he strode toward the house, laughing boisterously, hungry as a bear.

"I've been up since four," he announced. "Say, this is a great country!"

He sat down, ate a grapefruit, devoured two dishes of cereal, swallowed three cups of coffee, and attacked a platter of bacon and eggs.

"This old lady over here," he jerked his thumb off over the hills to the eastward, "she's a great character, isn't she? Deaf as a post. But she wants too much for that land of hers. I know something about land values. I offered her $4,500, but she wouldn't take it. Then I found some namesakes of mine up here at Valley Forge," he nodded in the opposite direction. "Beautiful old house of theirs, isn't it? Too bad it's so run down. This man Morton up here is a fine fellow, and that wife of his is a crackerjack. No, I mean crackerjill! They think a lot of you. Say, you're *dreadful* nice. But what's going to happen to Morton when the reservoir is built above him? That's what I'd like to know."

His eye ranged the table and lighted happily as my wife produced another platter of bacon and eggs.

"Say," he ran on, "I know how you find out where your boundary is up here on the mountain!" He chuckled. "If you cut down a tree and it falls your way, it's on your land, and if it falls the other way, it's on Chandler's land. Gosh, that was a funny case about that fellow who secretly cut a tree on your land and hitched a horse to it to try to make it fall his way, and then had to go for help to hoist his horse out of the ledge! That's what I call the justice of the gods.

"That man Charley Chase up here in the woods really knows a lot about dogs," he went on. "I've been picking up some points about him. I was talking with old Doc Graham up at the Forge, too. He told me . . ."

IN FIVE hours Osborn had ranged the countryside for a radius of five miles around; he knew the names of everyone and their family histories; the intrigues and legends of the neighborhood; the value of property; the sales made recently; the births, marriages, and deaths. He had found out why our township has less population than it had seventy years ago. He had learned who had owned the water-mills whose broken dams are half hidden in brush along our little rushing river. He knew all about our new town government, and what people thought of the new selectmen and why we have such bad

Neptunite Varnish
The one that stands the 3-Way test

SOME varnishes withstand heat, some moisture, some pressure. Lowe Brothers Neptunite Varnishes withstand them all! Neptunite can be put to the most severe test ever given any varnish. A dampened towel, placed on a Neptunite finished surface, can be *ironed dry* without leaving a mark.

But one general varnish cannot be expected to be perfectly suitable for a wide variety of uses. So instead of just *one* Neptunite there are *five*—each with its own outstanding merit. Neptunite "Floor" stands hard wear; Neptunite "Spar" is ideal for outside use; Neptunite "Rubbing" rubs easily; Neptunite "Seat" dries exceptionally hard; and Neptunite "Interior" gives a high gloss. Each varnish especially prepared to render a particular type of service.

We will gladly send you a copy of our booklet "Varnish Uses." It illustrates and explains the many ways varnish can be used to beautify your home—also gives helpful suggestions on preparing the surface and applying the varnish. Write for your copy today.

See the nearest Lowe Brothers Dealer. He will help you to select the proper Neptunite Varnish for the particular job you have in mind.

FIG & BRAN

Delicious Bran Breakfast Food

"Every case of constipation can be cured without drugs"

Keep the Energy of Youth

BRAN is nature's own gentle stimulant to the bowels. Figs is another. And Savita yeast extract helps to regulate body functions by energizing the digestive tract. In Fig-Bran all three of these precious substances are combined in a most delightful breakfast food.

Its bran keeps the bowels active just as a bit of bran in the mouth keeps the tongue busy until disposed of. Luscious California figs add a rare flavor. The Savita yeast extract contributes iron and vitamin so essential to blood and tissue building.

But Fig-Bran is more than a laxative. It is a real, appetizing food that everyone likes. It is ready to serve with milk or cream or fruit juices. Children eat Fig-Bran with benefit and relish.

Fig-Bran is but one Battle Creek Sanitarium Health Food that combines wholesomeness, flavor and relief from constipation. Your local Health Food Center has the complete line with descriptive literature on each. Start now with Fig-Bran and learn how delicious real health foods can be.

Write today for "*Healthful Living*"—a 60 page illustrated booklet written by the leading nutrition expert. Outlines with recipes the famous Battle Creek Diet System. Sent free upon request. Also name of nearest authorized dealer.

roads. He had studied the rocks, the ferns, the trees, the animals, and the birds. He had found out more about our neighborhood before breakfast than we had learned in seven years.

A day or so later I was lunching with him at a New York hotel. A handsome, round-faced, black-eyed waiter came up to our table, smiling broadly, and Osborn introduced him:

"This is my friend Alexander Zhelaskoff Constantinoff. Is that the right pronunciation, Alexander?"

"Yes, sir, perfect," smiled the waiter.

WHEN Constantinoff had gone with our order, Osborn burst forth:

"This fellow Constantinoff is great. He is a Bulgarian. Bulgarian father and Greek mother. He came to America at the age of two with his father, who got an education here, and then went back to Bulgaria as a Presbyterian missionary! Later on Alexander came to America again. He's been everything, from a waiter to a newspaper editor and back to a waiter. Now he's waiting, and writing insurance on the side. That's a great side line for a waiter, isn't it? He can practice while he waits!"

Then Osborn's deep-set dark brown eyes sparkled under their shaggy gray brows. "Yesterday Alexander came up to me here in the dining-room and said in a sort of frightened way: 'Governor, could you come up to my house to dinner tonight and hear our little boy play the piano?' 'Sure, I will,' I said. I took a tube train and then a bus to Hundred and Steenth Street and climbed to Apartment 21.

"Gosh, you ought to see that family! Lena, a Norwegian wife, a girl he met out at Valparaiso University, a handsome, buxom, smiling girl, and five children that soon will be six. We had dinner of cabbage soup that had been bulgarianized till it was half kraut. Kosher butter to lubricate the whole-wheat bread. Wonderful shish kabob. Golden cake as light as foam. Then little Boris played. Lange and Rachmaninoff and a lot of other things. Only eleven years old, and really an astonishing player."

Just then Constantinoff put our lunch down in front of us.

"Last night," the Bulgarian said to me, "was the greatest event of my life. My children will remember it forever." Then he turned to the stern, kindly, weather-beaten face opposite me. "Before Boris went to bed, he said, 'Mother, I wish Mr. Osborn could live forever.'"

Chase Osborn had fascinated and awed the Constantinoffs. The Constantinoffs had *interested* Chase Osborn. He was more deeply and genuinely concerned with every detail of the Constantinoff household and fortunes than he would have been with the family of a real estate magnate or a college president or a steel mill executive, for the Constantinoffs in their relation to America were to him an exciting phenomenon, and, besides, with simple people the human facts in which he is so interested stand forth more clearly.

I could go on indefinitely with proofs of Chase Osborn's knife-keen concern with everything on the earth and under it and in the heavens.

Is it possible to corral such a man as this with a definition, to express his

Digitized by Google Original from UNIVERSITY OF MICHIGAN

essential self or his message, or what you will, in a paragraph or a page?

"Business with me has been a successful sentiment," he wrote recently when I asked him about his philosophy. "I have never lost anybody a dollar and have never been associated with any enterprises that have failed, not one. My one rule was, and 's, to spend less than I take in; in other words, if you can't pay as you go, don't go. That's so deuced old-fashioned as to be humorous. It has been my policy not to try to take the last cent out of a thing, but to take only enough to permit me to go on in the more interesting adventure of pioneering and exploration, so as to add new wealth to the world. Long ago I decided it vulgar and inhuman and unjust to have much more than anybody else. If man would only be fair and not take so much, poverty might be entirely abolished. I made up my mind to give back what I did not need to live on."

So he has been giving back his surplus. He has given it to his family, even unto the remote reaches of his own and his wife's relations. He has given it to his town. He had given it to old friends and business associates. "There are some worthy people," he says, "whose pockets are pyrographed by spondulics. For such I have put money in trust."

But he is no foolish giver. Whenever possible, he gives in such a way as to stimulate people to efforts of their own. Recently he brought up and made active the question of a new hotel in his town of Sault Sainte Marie. Many times he had offered free for a hotel site a valuable piece of land facing the public park, but no one responded. Now the lack of a new hotel began to be more and more glaringly evident. So Osborn put himself down for $50,000 stock in the new concern, and went to the three banks in town in turn. "Of course you'll take $25,000 stock in the new hotel," he announced at each bank. "Well, of course—but—all right!" the bank officials gasped. Osborn has a way about him which usually impels people to do what he wants them to do. With this start, the sum rolled up fast. Everybody in town got in on it. It was a community affair. Civic spirit boomed. Osborn procured a good architect and presently the hotel began to rise on its foundations.

PERHAPS if we fix upon this conviction about *giving* we get near the essence of Chase Osborn. Acutely he puts his finger upon the fact that a genuine spirit of giving would heal most of the evils of the world. Not giving as *charity*, but a genuine giving by each man of his best self for the common good of all.

"Our system of education makes for false appetites," he writes. "Success is measured by taking only, which leaves in its trail hunger of soul and pain of body and ill-health of mind. We are educating unconscious and conscious burglars, who are trained skillfully to take as much as possible and give as little as possible. This is not the worst phase of modern education—it is that it is builded upon the assumption that taking is happiness; which is to say that *having* is happiness. . . .

"In the long run the balances would be the same if the competitions of life were those of giving rather than taking, and there would always be a better taste in the

"What is back of these bonds?"

When you buy bonds from The National City Company you get something more than dependable income and adequate security of principal. You get a broad choice of issues, and personal contact with bond men well qualified to help you select suitable offerings; you get quick service through a chain of investment offices in over fifty leading American cities, offices interconnected by thousands of miles of private wires; you get ready access to up-to-date information on your various bond holdings; and, finally, you get the broad benefits which come from dealing with an organization having a background of over a century of financial experience and maintaining close contact with investment conditions throughout the world.

Our monthly list of recommended issues will keep you informed on attractive current offerings. It will be sent upon request.

how they're kept free from corns

GILDA GRAY'S *Dancing Feet*

Those whose feet earn fortunes treat them with zealous care, as a singer does her throat or a painter his hands. That's why hosts of stage stars, dancers and athletes endorse Blue-jay as the safe and gentle way to end a corn.

• • •

For what other way could be so safe and sure? No guesswork. Each plaster has just the right amount of medication. The plaster removes shoe-pressure at once. So the pain goes immediately, and the corn follows shortly after.

You'll be delighted with the new refinements in the new Blue-jay. A new creamy-white pad and a more flexible disc. Now at all drug stores. *For calluses and bunions use Blue-jay Bunion and Callus Plasters.*

THE new

mouth of mankind; there would be no heart hunger, no bitterness, no envy, no malice, no war, no woe; there would be all joy of living; no fear of death."

Consider the implication of those words—"if the competitions of life were those of *giving* rather than *taking!*" Is that the impossible dream of a fanatic idealist? Does it run too hopelessly counter to human nature? At any rate, this conviction, that it is the solution of human relationships, and this forceful phrasing of it, is another supreme illustration of Osborn's individuality.

Recently Purdue sent a distinguished Indiana artist, Robert Wadsworth Grafton, up to the North Woods to paint a picture of Osborn, to hang in a place of honor at the university which he quit fifty years ago because of the too-keen competition of clawhammer coats.

In the artist's picture, which he calls "The Iron Hunter," you see Osborn garbed as he is today in his camp in his beloved woods by the rushing blue-green St. Mary's River. Here you see the gentleness behind his pugnacity; his canniness, his egotism, his benevolence; the wistfulness commingled with austerity—which all go to make up Chase Osborn.

WITH THE great and glorious Fourth on its way, we asked Edgar A. Guest to write something for our July number. Eddie responded, as we hoped he would, with a corking piece on Patriotism. It is not the spasmodic patriotic fervor, stirred up by fireworks and addresses, that he writes about, but how one can maintain a steady stream of patriotism the whole year 'round. Briefly, it is a little homily on Good Citizenship, told in Guest's own inimitable style.

Advice is All Right if You Don't Take Too Much of It

(*Continued from page 39*)

interested me. I tried to shut other pictures out an' stick to what I'd started out to do. I still made cartoons somebody else's way an' took them into class, but the kick had gone from it If I'd really done the thing I wanted to I'd have quit an' gone West. For I was fed up on cartoons by now—hated the things. But I didn't have the nerve to quit—go back an' admit I'd failed. It never occurred to me I might draw pictures I really liked.

Rolf Armstrong was the first one of my friends to make a move. He had gone on to New York. Fitzpatrick had caught on with the Chicago "Daily News." Occasionally, I saw one of Wood Cowan's cartoons from a paper in the South. Armstrong was catching on with the magazines an' I began to see his heads. He was writing for me to come on down an' beard the lions in their dens. So the next move was New York.

I started in to peddle my cartoons. But that first year was tough. I cooled my heels in the anterooms an' inter-

Digitized by Google Original from UNIVERSITY OF IOWA

viewed more office boys than I did editors. Occasionally I sold a drawing. Frank Casey was on "Collier's" at that time. He bought the first I sold. An' ten dollars looked like all the money in the world right then. To me it still is quite a sum. Occasionally I sold one to "Judge." Each week I took some down to "Life," an' always got them back. I had enough rejection slips to paper the walls of my room.

Other friends I'd studied with all started catching on. Neysa McMein, Lucile Patterson, an' Anita Parkhurst were all busting into print.

Ten dollars was as much as I got for any drawing that I sold. An' sales were few an' far between. If I hadn't been living among friends I'd have carried the banner that winter. I wasn't getting anywhere. I knew my drawings were bad. For I wasn't doing the thing I wanted to an', worst of all, I didn't know what that was.

MY FRIENDS were free with everything, an' each one gave advice, until I didn't know whether I was afoot or mounted on a horse. "Why not try comics?" one friend said. So I tried them a while. I knew they were as funny as a crutch, but I managed to sell a few. "Why not try political cartoons?" another friend said. So I switched an' did a few of them, till I was headed off again.

Then one night Tom Benton happened in. Tom was having a tough time too. But Tom was really trying to do something on his own, an' I respected it. Tom happened to see some sketches on the floor I'd really made for fun without any attempt at using the bag of tricks I'd learned from someone else. "First things I ever saw of yours I really liked," says Tom. "They're different from anyone else's work. I believe you really got something. Go down to the Public Library an' ask for a book on Daumier. Mebbe it will help you clear things up."

It was that book of Daumier's drawings that made up my mind for me. For he put things down just like he saw or felt the thing, without the sign of a trick. So simple an' honest they were, to my mind his drawings have never been equaled. An' something rolled off my back that night as I walked home that had bothered me for years.

I didn't intend to copy Daumier or imitate his style. But I made up my mind I'd try an' do things my own way. An' put things down the way I saw, an' felt the thing, no matter what else come.

That night when I got back up to my room some other friends came in. For dropping in to advise me had become a pastime of theirs. It was done with the best of intentions, but this night it didn't take. For when one of them suggested I take a job in an engraving shop till something started to break for me I told him I was through. "Ain't goin' to quit?" they said. I told them that I was. "I'm never goin' to draw another darn thing unless it interests me," I said. I wanted to get as far away from pictures an' people who drew them as I could. So I took the first train West.

Asterisks now denote one year's lapse of time, an' the next place we find our hero is in the Arizona hills, wrangling

"Real Pals"

The New Idea in Boy Training

American youth of today is tempted by hundreds of shallow and harmful diversions. You must hold your boy's interest! Be his "real pal." Help him to see below the surface of things.

Target practice is a fine way to teach him your own ideals. It passes the traditions of father on to son. It develops self-reliance—alertness—the team work of mind and muscle which many leading athletes attribute to target shooting.

Start your boy off with the Daisy, the rifle which millions have used these past 40 years. Ask your dealer to show you the rifle illustrated—the famous Daisy Pump Gun—a 50-shot repeater for $5—and other Daisy Air Rifles, a model for every age, from $1 to $5—or sent direct on receipt of price.

BOYS!
Get your FREE Copy of the Daisy Manual from nearest hardware or sporting goods dealer. It tells how to be a crack shot!

Armpits Dry and Odorless

A FEW drops of NONSPI (*an antiseptic liquid*) used on an average of twice a week—will keep your armpits dry and odorless—and also save your clothing from destructive perspiration stains.

NONSPI, used and endorsed by physicians and nurses, does not actually stop perspiration—it destroys the odor and diverts the underarm perspiration to other parts of the body where there is better evaporation.

More than a million other men and women *also* use and endorse NONSPI. It keeps their armpits dry and odorless and protects their clothing. They use NONSPI the year around—spring, summer, fall and winter.

Why be embarrassed? Why permit costly clothing to be destroyed by underarm perspiration? You can rid yourself of this condition and its disagreeable odor by using NONSPI—an old, tried and proven preparation.

Try NONSPI! Purchase a bottle from your Toilet Goods Dealer or Druggist for 50c (several months' supply) or if you prefer

Accept our 10c Trial Offer (several weeks' supply)

The Nonspi Company
2635 Walnut Street
Kansas City, Mo.

For the enclosed 10c (coin or stamps) send me a trial size bottle of NONSPI

horses for a cow outfit at fifty dollars a month. I wasn't a cow-puncher. For the wrangler seldom has anything to do with the cattle. My job was acting as a companion an' head nurse for some hundred-odd head of horses. Most punchers don't like it, for it's kind of a lonesome job. But I can think of lots worse company than a bunch of saddle horses.

I couldn't have made a better move, for I wanted to be alone. For I'd failed in the thing I started out to do, an' the less I saw of anyone the better it suited me. Five wasted years. I had plenty of time to think out here. But a man can't live long in those hills an' be alone without getting his feet on the ground.

I'd been in Arizona a year before I started to draw again. At times I'd itch to get hold of a pen, an' then I'd think of New York, an' tell myself I was through. Then, one day, as I sat cross-legged on my horse I caught myself drawing with a burnt match on my chaps. It was a drawing of one of the horses, an' I hated to rub it out. Not long after this I had one of the punchers get two brushes from a Chinese laundryman in town, an' I tried ink again. Some days I'd make as many as a hundred drawings in a day. The horses, the hills, the punchers, in fact anything that struck my eye. An' for the first time since I started off to school it was really fun again. For I was drawing the things that interested me an' drawing them my own way. But each night before I took the horses in I built a fire an' burned them up.

ONCE when I went into town I passed a little news-stand on the street an' when I did I pulled my pony up. For there were three magazine covers in a row, by Rolf Armstrong, Anita Parkhurst, an' McMein. I'd gone to school with them. I sort of looked my layout over, an' it didn't look so good. For I was riding a poor ole pony an' my boot heels were run down. Five wasted years. It had taken me that long to find I didn't want to do a thing—well, anyway, thinks I, I'll keep on drawing the way the thing hits me, if no one ever sees them. For the very thought of New York still sent a chill through me.

I'd been in Arizona a couple of years when Fitzpatrick found where I was. One day when I went into town I found a letter from Fitz. An' when I answered his letter I made a sketch on it, just a head of one of the punchers. An' Fitz wrote back an' said the editor of the St. Louis "Post Dispatch" would use some stuff like that if I'd send in some drawings.

At first I bucked, for I had my doubts of all editors. He'd probably want the puncher to wear a pretty scarf an' be dolled up, smooth-shaven an' everything, instead of the way we dressed. But I was drawing pictures all the time, so why not send some in.

In due time a letter came from Fitz, an' if I hadn't been living on good beef an' frijole beans the past two years I'd have fainted on the spot. For Fitz said the editor was using a double page of them, an' would I send some more. Would I? I'll tell a man I would! But still, I figured something must be wrong. For I couldn't understand how anyone would pay real money for drawings that were really fun to do.

Armstrong was writing me to come on back an' give the thing another whirl. But I was still spooky of New York and I hated to leave these hills. For the life in a cow camp had got hold of me. An' I didn't want to leave. So I wrangled horses an' punched cows in the spring an' fall an' went on making pictures.

I'd been in Arizona four years, drawing the things I liked. Then one fall, after the round-up, I went back up to Chicago. O'Donnell was editor of a little magazine called "Cartoons." He happened to like the things I drew an' he bought drawings of me all winter.

The late George Bellows was teaching at the Art Institute that winter. An' when he saw some horses I'd drawn, he gave me a pat on the back. It helped a lot, for I'd been going it alone regardless of anyone. An' his opinion meant a lot to me, for I respected the things he did. "Too bad more artists don't go to Arizona," he said; "maybe they'd learn to draw. Don't let anyone try an' tell you anything," he said. "Keep on the way you are." I stayed there until the grass got green, then my feet began to itch. An' I was back in Arizona when the spring round-up started again.

I worked through the spring an' fall round-up, an' as soon as we shipped that fall I tightened my belt an' bought a pair of flat-heeled shoes an' headed for New York.

Several friends all gathered the night that I got in, an', with the best of intentions, they started advising again. For the drawings were all strange to them an' they didn't think they'd go. "Now, if you had a girl in the pictures," said one, "I believe that they would sell." Another friend, after looking them over, suggested that I draw them bigger. I got enough advice that night that if I'd followed it I'd still be working on them. "They'll go just like they are," I said, "or they won't go at all! If they do, all right—if they don't, all right; an' I'.l go back to Arizona."

Frank Casey had left "Collier's" an' was art editor on "Life." He was one of the few editors who had left a good taste in my mouth, so I poled up to see him. An' Casey took two drawings, the first "Life" ever bought from me. That in itself was worth the trip. For it was just eleven years from the time I sent my first drawing into "Life" before "Life" bought a picture.

"Century" was the next place that I struck, an' when they took six pages of drawings it began to look as if I might pull through the winter.

ONE day I happened to tell the editor of "Boys' Life" of an incident at the ranch. He told me if I'd write it, he'd be glad to buy the story. At first I wouldn't try it, for I'd never tried to write. Pictures caused me grief enough without taking on more misery. For I remembered Tom Craven, a friend of mine, had written ten years, an' made just twenty dollars. But the editor insisted, so I finally wrote the thing. He paid me twenty-five dollars an' asked me for another.

It was shortly after this that I happened into "Leslie's." William Morris Houghton was the editor at that time, an' in the course of our conversation he asked me if I wrote. I laughed an' told him I'd just sold two lousy stories to a boys' magazine. For the idea of me trying to write still

struck my funny-bone. But Houghton countered by asking me to bring him one of the things.

I went home that night an' wrote the piece. It was an incident that happened to one of the punchers at the ranch. An' Houghton, after reading it, said if we could get together on the price he'd like to buy the story. I figured that would be easy but I didn't tell him so. An' when Houghton told me how poor the magazine was, an' how they couldn't pay like some of the bigger ones I begun to feel so sorry for the magazine I was ready to give him the story. But the next thing Houghton said had me rocking on my toes. For in a casual, offhand way, he said, "How does a hundred an' fifty strike you?"

It struck me right between the horns. But I'd been kicked before by horses at the ranch an' managed to survive. So as soon as my head got clear again, we dickered for a while. For I'd played poker some. Finally, he said two hundred was the most that he could pay. An' I staggered out of the office still rocking on my toes. For two hundred dollars meant just four months' wages at the ranch.

"Leslie's" bought more stories at two hundred a shot. An' coming from a family of horse traders I got to thinking about one "Boys' Life" had bought. It was as good, I thought, as any "Leslie's" took, an' I'd only got twenty-five for it. So I dropped in at "Boys' Life" an' dickered with the editor.

He was a friend of mine, an' said if I thought I could get more than twenty-five for it he'd be glad to sell it back to me. So I took it up to "Leslie's" an' got two hundred for it. About that time George Martin of "Farm and Fireside" sent for me, an' we've been trading horses ever since.

AS FAR as the stories go I know nothing of so-called writing. I simply try to tell the things that interest me an' tell them my own way. I'll listen to anyone's advice. Any that I find helps I take, an' throw the rest all out. For it's all right to listen to advice if a man don't take too much of it.

New York still gives me a slight chill when I come back to it. But they've raised the ante some since the stories "Leslie's" bought. An', of course, that always helps. For I still try to write about real punchers an' the things I know. For I happen to know how it feels to ride herd in the rain or be thrown from a pitching horse. Writing still comes hard to me, an' I expect it always will. An' the real fun in doing a story is drawing the pictures for it.

For I'm still trying to draw the things that interest me, an' draw them my own way. I tried to be someone else an' couldn't get away with it. So now I peg along as best I can an' try to be myself.

The New Shorthand!

Easy to use after one night's study

NOW, you can learn shorthand at home without months and months of hard study. "Speedwriting" is so easy that you can actually begin to use it after one lesson; only 72 study hours are necessary to become an expert.

Speedwriting is the simplest way for young men and women to become expert secretaries . . . at an expert's salary. In addition, it is of the utmost value to executives, professional men, and college students.

You can make quick, complete notes after a few days of study.

It is a natural shorthand, using the ordinary alphabet—no difficult signs and symbols to memorize. You use Speedwriting just like handwriting, only so much *faster* that you can now write as rapidly as most people talk.

Pay while you are learning

Speedwriting is as easy to pay for as it is to learn. You send us its fair low price in small installments while receiving the lessons.

Get complete information. Free book describes Speedwriting in detail. Send no money. Just mail the coupon to us immediately.

Grindstoned

(*Continued from page 27*)

His mood was shadowed after the brief interview in the squire's dingy office over the harness shop, so that not even Jamie's buoyancy was able to lift his spirits. He listened silently to the boy's eager talk all during the long, plodding drive to the farm. Jamie would have helped him unload the sacks of cut feed, but he refused.

"No sense to getting your clothes all mussed up. Might go start supper, though, if you're a-mind to, while I see to the chores. Find an apron back of the door."

By the time he came in with the milk to the smell of frying bacon and coffee, his cheerfulness was in a measure restored. He listened more attentively to Jamie's plans, while they ate and washed the dishes. The new paper was destined to be a mighty power; all the finest minds of the rising generation were already under promise to write for it; Scheib was a wonder at lining up genius. "The Rising Sun" would be, above all else, fearless, outspoken. The world was ready for such a voice, leading it out of darkness.

"Sounds first rate," said Nathan. "Look here, Jamie, whyn't you slip over and tell Milly about it? Be real int'rested, Milly will. Guess she'll be kind of counting on seeing you, too—told her you was coming home to-day."

"Well—" Jamie hesitated; but his eyes moved with a brightening glance to the white house that clung to the hill's breast in the picture framed by the open doorway. "Sort of hate to leave you alone; but if you think I'd better go—"

"Figured on going to bed kind of early, I did," said Nathan. "Kind of had a hard day of it. You go on over—we'll have plenty of time to talk to-morrow."

HE DID not, however, go to bed when he finished with the dishes. Instead, stretched in the hammock-chair on the porch, he looked out across the darkening hollow where the shadows deepened like a slow sediment in a pool of fading light. Slowly the trees and fences disappeared, till there was only the silhouetted shoulder of the hill against a sky of stars, and, bright against its blackness, a single yellow spark of lamplight from the east window of the Hadden house. He watched it till he fell asleep. Jamie, returning, woke him with a cheerful whistle, rallied him gayly on not having sense enough to sleep in his bed.

"Milly pleased, was she?"

"Guess so—you know how Milly is." Jamie chuckled. "Wouldn't say much if somebody came along and gave her a million; but you know, all the same, how she feels about things." He whistled again. "Prettier than ever, isn't she?"

"Smart, too," said Nathan.

"Yes, she's got a first-rate mind." Jamie paused. "It's a rotten shame she's never had a chance to have it trained. She thinks absolutely straight about things she knows; but—but there are gaps, where she doesn't know, where she's just as sure of herself as if she did. It's a pity. If she'd ever had a chance—"

"Guess it wouldn't take her long to learn," said Nathan. "Smartest girl I ever talked to, Milly is. Sight smarter 'n me, anyhow."

Jamie chuckled. "She said she'd seen quite a lot of you this winter and spring."

"Been over there some. Figured it wouldn't do no harm to leave her see your letters. Sort of keep her in mind of you." He hesitated. "Charlie Brownlow's been hanging 'round some."

"She wouldn't look at him!"

"Figured she wouldn't, but I sort of aimed to make sure. Won't ever amount to much, Charlie won't. Be a pity f'r a girl like Milly to spend her life doing housework f'r him."

"Guess there's no danger." Jamie laughed comfortably, moving toward his bedroom door. "Wake me up, Nat, will you, in the morning? Need somebody to turn the grindstone while you grind the mower knives, I guess." Jamie's voice held a hint of self-approval, as if he was pleased about his remembering the technical detail.

"No. Got the stone rigged so I turn it with my feet. Make out first rate single-handed. You better take it easy, Jamie, long's you're home. Need your stren'th, I guess, when you start in editing that there paper."

"You're pretty level-headed, Nat." Jamie's tone warmed. "Most people who work with their hands can't seem to understand that brain work takes it out of a fellow even more than pitching hay or swinging an ax. Used to think I was tired after a day's work on the farm; but I never knew what being abso'utely used up was like till I'd sat up all night boning for my first exam! But a lot of people think it's soft!"

"Wouldn't be f'r me, anyhow. Sooner thrash, any day." Nathan spoke drowsily, beginning to undress. "Can't hardly keep awake right now. G' night, Jamie."

FOUR hours' work lay behind Nathan, next morning, when he saw his brother crossing the meadow toward the Haddens'. He grinned contentedly as he drove the clacking mower; nothing that Jamie could have done in the hayfield would be half as worth-while as this employment of his leisure. One of these days—his mind dwelt pleasantly on a future in which not only Jamie Telfer would be free of the dull, profitless drudgery of the farm, but Milly Hadden too. Somehow, as the familiar, homely figure of speech rose in his thought, it was Milly's escape that seemed the more desirable of the two. Her nose was too pretty to be held against a grindstone.

He met her in the village after he had driven Jamie, with Squire Fentress's check in his pocket, to the train. The sight of her somehow comforted him against a depression caused partly by Jamie's going and, selfishly, by the consciousness of the lien that lay against his land.

He seemed to see her, for the first time, with Jamie's more enlightened eye; she was pretty, thus inspected, as pretty as she had always been to Nathan Telfer's

"The Old Swimmin'-Hole"

WHOSE but James Whitcomb Riley's great boyish heart could make immortal the shaded pool of romping boyhood? No other American poet has touched the simple joys of life with the same sympathy and charm. For every mood Riley wrote a verse; he stirs every kindly emotion with the deeply sincere humor and pathos of his lines.

For years there has been an insistent demand for all of Riley in one fine popular priced set. That demand can now be satisfied. All his poems, all his short stories, the master pieces that have caused the schools of his native state to have a Riley Day once a year—are in ten beautifully bound and illustrated volumes. Every cultured home should at least know something about Riley.

A booklet containing further information about these books will be sent you on request. The booklet is free.

Fill out the coupon today, the book will come by return mail.

untutored observation; even her dress, for all its thrifty simplicity, wasn't so very different from the clothes that girls wore in the magazines. But, with a sudden stab of rebellion, Nathan saw upon her the scars, premonitory rather than real, of the harsh, heavy, stupid work that all Glen women did, like their men-folk, as the price of mere survival.

Her hands weren't pretty, even now. He'd never noticed before that they were red and roughened and chapped, like her mother's, from dishpan and washtub.

"Been seeing Jamie off, have you?"

His ear detected, resentfully, the Glen slurring of syllables. He seemed to hear it with Jamie's ear. If she'd been away at school, like Jamie, she'd have picked up the talk as quickly as he had, more quickly, perhaps—women were smarter about such things than men, even such clever men as Jamie Telfer. Here in the Glen she hadn't any chance or reason to improve upon the homely, clumsy speech of the hills.

"Uh-huh." He nodded. "Guess he told you about things, didn't he? Know what he's up to, down yonder."

"Yes." She hesitated, her lips compressed a little. "You've done a lot for him, Nat. He told me about the money."

"Wasn't only his fair share," Nathan said. "Suited me better 'n trying to sell the place and divide the money."

"He'd had more than his share already," she objected. "You've been paying his way through college all this while, and now—"

"It don't amount to anything. Always aimed to see to it 't Jamie didn't have to wear himself out on the farm." His voice warmed. "Sight too smart for it, Jamie is. Ain't many boys c'd ketch on the way he's done—next to the highest in his class, down to that college, and stepping spang into this editing job, minute he's finished school!"

"It's all your doing, just the same. He'd never have done it without you."

"Ain't so sure. He's smart. Guess he'd 've made out to amount to something anyhow." He hesitated. "Got better reason to 'n most, anyway. Guess you know what I mean, Milly."

He saw her flush, but she said nothing. He turned away, grinning contentedly. Likely they had it all settled between them. Jamie hadn't said anything, but he wouldn't be apt to, even to Nathan, till he was in shape to marry. That wouldn't take long, the way things stood. The thought of the mortgage didn't trouble Nathan Telfer very much as he drove home.

EVEN in the first moment of startled pleasure at the sight of Jamie, a shadow fell across Nathan Telfer's spirit.

He rubbed his hand on his overalls before he extended it in response to Jamie's eager gesture, uncomfortably aware of the contrast between the big, misshapen, calloused fingers, and the soft, well-kept city hand that met them; of the difference between his own awkward height and Jamie's straight, lean, confidently graceful carriage; of his ugly, work-stained clothes and clumsy shoes. Even more, however, he sensed his own want of words. With all that there was to say, after three years of separation, he could only grin and stare.

Socks
that appeal to both sexes

WEAR these socks and wear them *hard.* They are light and cool for summer days, but veritable *Iron Clads!* Woven in the newest sprightly patterns and latest color combinations, they are the season's smartest sock for men who have an eye for style and individuality.

"Same old Nat!" Jamie clapped an affectionate hand on his shoulder. "Haven't changed a bit."

"Wasn't—wasn't expecting you," Nathan managed to tell him. "Give me quite a start." He half turned toward the house, paused, suddenly reminded of the pail that swung from his elbow. "Go right in and make yourself to home till I milk," he said. "It won't take me long."

Jamie laughed. "I'd have bet you'd say that! Take more than me to make you forget your chores, wouldn't it, you old scoundrel! Haven't changed a hair!"

Nathan grinned uncomfortably. "Got to be done, milking has," he said defensively. "No way to get out of it, same as death and taxes. You go in and—"

"I'll come down and talk to you while you do it," said Jamie. "Been waiting long enough for the chance!"

There was no possible room to doubt the sincerity of the tone. Nathan Telfer warmed under it. A dim fear that his brother might be ashamed of him retreated to the back of his mind; Jamie wasn't that sort. No matter how far he left the farm behind him, he'd remember. . . .

"'Most give up expecting you," said Nathan. A new anxiety stirred in him: "Everything all right, down yonder?"

"Fine! That's why I'm here." Jamie, chuckled. "The paper's making money at last, and I've got an assistant. And look yonder!"

Nathan's glance followed the gesture to a shining new car under the maples that overhung the retaining wall.

"Mine," said Jamie. "Paid for, too." His tone changed. "That's what I've been waiting for, Nat—promised myself that the first time I came back to the Glen I'd come in my own car. Just got it yesterday, and here I am!"

NATHAN nodded, puzzled by the queer returning shadow that slid over his content. He ought to be altogether delighted by this proof of Jamie's success; cars like that one cost a sight of money, as much, maybe, as the farm was worth. He was ashamed; instead of being glad and proud he was mean enough to wish, almost, that Jamie had come home in rags, begging.

"Looks fine," he said. It seemed to him that his voice creaked with the effort of speech. "You must be doing first rate."

"It's all your doing if I am." Jamie's hand lay on his shoulder; they walked in step along the unevenly spaced flat stones that paved the pathway to the cowshed. "If it hadn't been for you I'd be right here, getting ready to help you milk, instead of—" he paused. "Look here, Nat, how about the mortgage? If you need any help—"

Nathan shook his head. "Got it 'most paid off," he said, almost sullenly. "Make out to get shut of it, this winter, if nothing goes wrong."

"Really?" Jamie's voice changed. "How did you ever manage it? I thought you'd be lucky to keep the interest paid, the way farming's been, lately."

"Been getting out stove wood, winters," said Nat. "More sale f'r it 'n there used to be, the way folks been going back to open fireplaces."

Jamie twisted his head to look up the hill at the front rank of the woods that crowned it. He chuckled softly.

"I might have known it! I felt mean about it; but Scheib knew better. He told me that any time a Yankee farmer gave me the best of a business deal I'd better buy a padlock for my watch!" Again he clapped his brother's shoulder. "It's all right, Nat; I'm not kicking, but I've wasted a lot of pity on you, all this while."

"Don't know's there was any call to do no pitying," said Nathan. "Made out to get along, I have."

The shadow deepened upon him as he listened, the resounding pail between his knees, to Jamie's easy flow of talk. He groped vaguely for the cause of it, puzzled to discover that he wasn't happy.

"Le's go get supper." Nathan kicked away the one-legged stool and released the stanchions. The cow broke into an ungainly trot under the spiteful slap of his palm. He carried the pail to the kitchen, wishing that Jamie'd stop talking, give him a chance to think things out. He busied himself mechanically with the familiar routine of supper, while Jamie, perched on a corner of the table, swung his legs and smoked and chattered gayly on.

"HOW'S Milly? Pretty as ever?" The tone jarred on Nathan's ear. He turned sharply, on the point of angered protest. After three years, Jamie hadn't any business to ask about Milly Hadden as if he'd seen her last week.

"Might go over after supper and see," he said.

Jamie grinned. "Guess I will." He exhaled deliberately. "It'll be fun to see Milly again. Always liked her."

Nathan Telfer scowled at the skillet. Here was another piece of folly; always, during these years of separation, he had been afraid that Jamie'd fall in love with some girl in the city; always he'd contrived to mention Milly Hadden in his labored letters and taken pains to repeat to her Jamie's occasional messages. Now and then he'd gone so far as to invent these.

And yet, for no reason at all, he wasn't pleased at the thought of Jamie's driving that new, shining car over to the Haddens' after supper. He caught himself in the act of an ungracious wish that Jamie hadn't come home at all.

He went to bed without waiting for Jamie to come home, and in the morning he was careful not to wake him. The sun was high and hot by the time Jamie sauntered out to where the mower clacked through the first cutting of lush alfalfa; he waited for Nathan to complete the circuit of the field.

"Don't worry, old man, I'm not going to bother you at your work. Haven't forgotten that haying won't wait. Just wanted to let you know I won't be home till after supper—Milly's going to let me take her over to Long Lake." He showed his teeth in his cheerful grin. "Gee, she's pretty, isn't she? I'd forgotten what a perfect knock-out she was for looks."

Nathan Telfer managed not to frown. "Got a sight more 'n good looks, Milly has," he said shortly. "Hope you'll have a good time."

Jamie hesitated. "I'd ask you to come along, only I know you can't very well leave your hay."

"I sh'd say not." Nathan clicked to the team. He saw the shining car, presently, sliding down the groove of yellow road between the overgrown fences, and wondered, helplessly, at the smolder of dull resentment it kindled in him.

There was no sense to this; he'd always looked forward to just what was happening. He saw, more clearly than ever before, that everything he had done for Jamie had been done as much for Milly Hadden's sake; that, all along, while he sacrificed and sweated to free Jamie from the slavery of the land he had been thinking even more of opening, through Jamie, an escape for Milly. He'd have hated the boy if he hadn't liked Milly; he almost hated him, now, because he did like her.

Grimly he compelled his thoughts to dwell on the prospect. Presently Milly'd ride away in Jamie's new car, out over the enclosing wall of the hills and down to the cushioned, easy life that lay beyond them, to an existence that would shield and increase her beauty instead of slowly killing it.

They'd come back, now and then, for little flying visits, and each time they came they'd make him feel as he felt now—aware of his huge, awkward body, his knotted hands, the slouching shamble of his knee-sprung gait, his sluggard tongue and wit. He found himself wishing that he needn't ever see either of them again, that they'd just get married on this drive of theirs and keep right on to the city.

HE WAS about to begin his chores when the car whirred in at the gateway. Jamie sprang down and came toward him.

"Well, Nat—I'm pulling out." Jamie thrust out his hand. It felt soft, puny, in Nathan's huge, calloused palm. "Just called up Scheib over the long-distance, and I've got to be on the job in the morning; there's a big story breaking in this war-debt business and Scheib wants me to handle it. I'll have to drive most of the night."

"Figured you'd stay a while." Nathan's tongue moved sluggishly. "Ain't hardly seen you."

"I'm sorry; but it can't be helped." Jamie spoke abruptly, as if he was displeased about something. "You know how it is, Nat—my work won't wait, any more than yours will. There's a chance, right now, of waking the American public to the truth about these war debts—"

Listening to the stream of words, Nathan Telfer became dimly aware of a dull annoyance below his awed sense of eloquence and brilliancy. Something in the cocksure voice woke in him a stubborn disagreement; Jamie's face seemed to change as he talked; it was queer, Nathan thought, that he'd never noticed how long and sharp Jamie's nose was, how, unreasonably, he now resented that pointed length as if it were Jamie's fault.

"Well, I guess that covers it." Jamie's tone changed, "Better be starting." He held out his hand. Again, encountering its softness, Nathan felt a dull, unreasonable resentment. "I'll run up again pretty soon, Nat."

"Hope so." Nathan discovered that he wasn't speaking the truth. He didn't hope that Jamie would come back with that shining, magnificent car. He tried to resist the sense of relief with which he watched its brisk departure, heard the loose planks of the bridge rumble under

DEBUTANTES OF MODERN BUSINESS

Miss Mary E. Kelly . . . a representative modern business girl employed by the Ready Mixed Concrete Corp., 101 Park Ave., N. Y. C.

ROYAL

TRADE MARK

TYPEWRITERS

— *in a few short years*

—they will leave business for homes of their own—desert their typewriters to fulfill their destinies. The *Easy-Writing* Royal Typewriter was designed to safeguard the health and nervous energy of these girls. It was designed for this no less than to speed the affairs of their employers.

Business recognizes this. In increasing numbers employers are turning to the *Easy-Writing* Royal Typewriter for aid in developing the efficiency which today's keen competition necessitates—and of maintaining it without sacrifice of health or nervous energy of these finer, more competent girls of today.

The modern business girl expects this consideration. Her work reflects the measure of cooperation she receives.

The *Easy-Writing* Royal Typewriter is definitely superior. It produces better work at a higher rate of speed with far less fatigue to the operator.

ROYAL TYPEWRITER COMPANY, INC., 316 Broadway, New York City—Branches and Agencies the World Over

Makers of the Easy-Writing *Royal Typewriter for the office and the Royal Portable Typewriter for the home*

the disdainful spurn of its tires. He suddenly hated the car, hated it because it was sure to bring Jamie back, soon and often. Trust him for that, after seeing Milly Hadden!

Mechanically, his mind blurred and clouded, Nathan Telfer went about his chores. He had stabled and fed his team when he caught sight of the knife bar he had carried down from the mower, left overnight in the hayfield. He glanced at the sun; it was early, time enough to grind those knives before he milked. For some reason he felt as if the task would be, for once, agreeable.

He found it so, although, as always, the jarring slither of steel on stone set his teeth on edge. He bore down heavily, even enjoying the feel of the gritty water that ran out over the knife and stained his knotted fingers. He hummed between his set teeth.

A SHADOW darkened the open doorway and he looked up, startled, to see Milly Hadden standing there. For a moment he stared at her; there must be some extraordinary reason for her presence. Obscurely he associated it with Jamie.

"He had to go back," he said. "They sent for him from the office—"

"I know. I was with him when he telephoned," Milly nodded. "It cost a dollar."

"Guess that wouldn't worry Jamie much," he said quickly, as if in answer to an implied reproach. "He's done first rate down yonder, Jamie has. Prob'ly told you himself."

"Seemed real satisfied." Her voice somehow reminded Nathan of the edge which his thumb was mechanically testing. "What did he want of you this time, Nat?"

Nathan's eyes went wide. "Want? Why, nothing. Whatever gave you that notion, Milly?"

She laughed shortly. "Isn't he always after something when he comes here? And doesn't he always get it? I tell you, Nat, I've stood it long enough! Watching you work your hands off for—" She stopped. "What does he want now?"

Nathan had never seen her angry. It made her, he thought, prettier, more—more alive, somehow.

"Should think you might guess, Milly," he said, a little awed by his daring. "It isn't money, anyhow."

He watched the color deepen below the sunbrown of her cheeks; but her eyes met his directly.

"Me, you mean?" She laughed again. "Well, he doesn't—not after to-day! We've settled that. He doesn't want me a bit more, now, than I want him!"

He stared. "Sounds as if—as if you didn't like him, Milly. Always thought—"

He paused. Somehow, he couldn't make himself tell her, straight out, why he had set Jamie free of the dull, hopeless slavery to the soil.

"Always thought you kind of liked him," he said slowly. "It was mostly my own notion, sending him to college and all." The stone between his knees suggested his father's homely metaphor.

"Wanted him to get his nose off the grindstone, Milly, so—so when—if you kept on liking him—"

She stood still for a long moment, color rising faintly under the sunbrown of her cheeks, but her eyes, straight and frank and understanding, holding his.

"So that was it?" She spoke under her breath. Slowly her lips curved to a reluctant smile. "Maybe, if Jamie's nose had been ground down a little it wouldn't be so long now, or so handy for poking into other folks' business. Maybe it would look more—more like yours!"

He did not at once believe his ears, nor the eyes that saw the look of her; his mind was still defensive, apologetic.

"WANTED you to—to have the best there was, Milly. Wanted—"

She laughed, very softly. "Don't you worry, Nat. That's just what I'm going to have!" She moved abruptly toward him. "Here—I'll turn for you."

Over his mumbled protest she fitted the crank handle to the squared end of the shaft and, balanced on the one-legged stool, swayed back and forward to the slow revolution of the stone. Instinctively, Nathan Telfer bore down again on the knife-bar, and the grating rasp of the steel jarred across the warm stillness of the dusk. Milly's teeth were set, like his, against it, but her laugh came happily between them.

"It sounds good, doesn't it?"

Nathan Telfer discovered, suddenly, that it did.

Divorced!

(*Continued from page 29*)

coming of the Federal Reserve Banking System in 1914, that divorce became still more definite. Our present fiscal arrangements make it practically impossible for us to have a genuine money panic.

"With regard to the business outlook in the present election year, I feel what I believe to be justifiable confidence. But in order to explain this confidence, I want to show the difference between present conditions and those which have existed during previous election years.

"Up to 1904, as I have just explained, the money situation, or the fear of unsound changes in our currency, was responsible for the serious business depressions in election years. In the present campaign that fear need not be considered, *because it does not exist!*

"In 1908, during the first Taft campaign, we had another depression. This was partly due to the fact that we were then in the heyday of the 'trust-busting' period. There was fear of radicalism, too. Also, these election-year reactions were a *habit* with us; and habits are hard to break.

"In 1912, came the three-cornered fight between Taft, Wilson, and Roosevelt, as a 'Bull Moose.' The business recession was very slight that year and recovery promptly followed.

"During the first Wilson Administration, in 1914, came the most important and far-reaching business event in the history of this country: the establishment of the Federal Reserve System.

"In that year came also another tremendously important event: the beginning of the World War. The course of business during the next six years depended entirely on the war and not on our own political issues.

"During the 1916 campaign there was a slight recession, but a quick recovery. The recession probably was purely psychological; for at that time we were sure to have prosperity, no matter who was elected President.

"THERE was a reaction in 1917, when the United States went into the war; but that was because of a temporary uncertainty and it was all over within a few months.

"The prosperity of the 1914-1919 period was the result of the fortuitous circumstances of war. *It was independent of politics.*

"The same thing is true of the business depression which began during 1920, the next election year. It was simply the commencement of the inevitable post-war deflation; and it would have come in any case, no matter which party was in power at Washington.

"Even in past election years there has been no general rule about business being good or bad. In six of the twelve years it was distinctly above normal. In five it was below normal; and in one it was about evenly divided.

"The present year, 1928, opened with business somewhat below normal. This slowing down, which was not serious, began in 1927 and had no connection with the fact that 1928 would bring a presidential campaign! It was entirely due to *business* factors.

"What conclusions are to be drawn from all this evidence?

"The first one is this: Business never was as dependent on politics as people thought it was. Second, it is less dependent now than it ever was! Third, that there always has been a business recession during the campaign. But, fourth, since 1904 these recessions have had no justifiable grounds in the political issues of the campaigns. Fifth, there seems to be a tradition that business must be bad in election years. Sixth, there is no valid reason for sticking to this tradition now. Seventh, sometimes political campaign talk—as in 1924—can cause a business reaction for which there is no excuse. Eighth and last, sensible men should not pay attention to this sort of campaign talk, but should study business conditions on a purely business basis, just as they do in non-election years.

"I think that covers the ground," said Colonel Ayres. "There is an old phrase to the effect that 'business is business.' We need to get rid of the idea that 'business is politics'."

"But are there no political issues, likely to come up during this campaign, which may have an effect on business?" I asked.

Touch a Corn

With this amazing liquid

Acts like an anaesthetic
Stops pain in 3 seconds

INSTANTLY and at once, you can wear tight shoes, dance, walk in comfort. Then soon the corn or callus shrivels up and loosens.

You peel it off with your fingers like dead skin. No more dangerous paring.

Professional dancers by the score use this remarkable method. Acts instantly, like a local anaesthetic. Doctors approve it. Removes the whole corn, besides stopping pain at once.

Ask your druggist for "Gets-It." Satisfaction guaranteed. Works alike on any corn or callus—old or new, hard or soft.

"GETS-IT" *World's Fastest Way*

Saving money is not my idea

THAT is, saving money at the expense of dependability. No doubt, I could buy cheaper flashlight batteries than Eveready, but I'm taking no chances. When I press the switch, I want LIGHT.

I use Eveready Batteries on my radio set and Eveready Batteries in my flashlight. They are made by the same people in the same shops. And how! It's sometimes a matter of light or death. What's a penny or two then?

Get the flashlight habit. A good flashlight is always a convenience — often a life-saver. And the battery is terribly important!

"Well," he replied, "let's see what issues are likely to be discussed. Probably prohibition; but that won't affect business in the least. Religion? No connection whatever with business. Government ownership? A dead issue at present. Government supervision of public utilities? Yes, that is a possibility in which the utilities themselves are interested; but it is not vital to business as a whole.

"Some form of aid to merchant shipping? That is something which we have now and which needs modification. If we get it, my belief is that we shall be better off. And if we don't get it, we shall be no worse off than we are now.

"Agricultural relief? I concede that this issue does have a definite bearing on business. But I don't see any reason for getting panicky about it at present.

"As a matter of fact, there probably will be no real conflict on important issues. And so far as *business* is concerned, I don't think the election is of great importance.

"One interesting thing in connection with the subject is this: Business has an exaggerated aversion to change of any kind—even to a change which later proves to be an improvement.

"THE most striking example was the attitude of business toward the Federal Reserve System. The very men who fought it most bitterly fifteen years ago couldn't possibly be persuaded to give it up now.

"In the Cleveland Trust Bulletin of October 15th, 1924, I mentioned what was then an interesting fact in regard to our business prosperity. During the preceding forty years, there had been twenty-four years of Republican administration and sixteen years of Democratic régime. Under Republican rule, 55 per cent of the months were characterized by business prosperity and 45 per cent of them by business depression. Under Democratic rule the relative percentages were exactly the same.

"We now have had four more years of Republican rule. As most of them have been prosperous ones, the percentages would now be somewhat different.

"However, there is no way of proving that the past four years would have been materially different, so far as business is concerned, if the Democratic Party had been in power. The point is this: Economic conditions were such that they almost inevitably brought prosperity.

"When that is the situation we shall be prosperous anyway, unless the party in power willfully and recklessly attempts to prevent it; which is almost inconceivable.

"There is only one conclusion to be drawn from these facts: To a degree which seemed impossible twenty-five years ago, business and finance have become emancipated from politics. Their fluctuations are almost entirely due to factors within their own fields and largely under their own control.

"I do not believe there is the slightest threat that the result of the election will bring into power an Administration, of either party, which will prove unfriendly to legitimate business, or committed to fundamentally unsound economic policies.

"If that is true, there can be no reason why we should have a business reaction this summer *merely because of the campaign.* Such reactions will come and go from time

Digitized by Google
Original from UNIVERSITY OF IOWA

to time because of general business conditions.

"Of course, the divorce between politics and business never will be absolute. Nor will we ever reach a time when business will not have to adapt itself to new laws and regulations. But in most cases experience has proved that, after a period of necessary readjustments, these innovations have been a help to legitimate business.

"On fundamental economic questions, both of our leading political parties are, I believe, better informed and better intentioned than ever before. Neither party has any desire to interfere with honest business.

"While the divorce between business and politics is not absolute—nor is it desirable that it should be—the old relation has disappeared. Business now stands on its own feet. It does not 'sit in the lap of politics.' That being the case, it is about time for us to get rid of the tradition that a presidential election year is necessarily the proper occasion to have an attack of business chills and fever.

"What about the business recession last year? It had nothing whatever to do with politics, and there is no present political factor which should be permitted to disturb business conditions *this* year.

"In driving a motor car, what do we consider? The car, the road, and the traffic. We are not influenced by what is happening somewhere else.

"That is precisely what business men should do. They should understand their own equipment, the course of business, and the traffic they must meet. In other words, they should realize that business is business; not politics."

White Birches

(*Continued from page 21*)

As he went, he paused, as if forgetting something.

"Oh, 'Relia said to tell you you'd better drive in some Saturday and stay for the dance."

He let things go at that. But the next time he came he said:

"Looked for you down to the hall Saturday night."

"Guess you can keep right on looking," Nan replied.

"Should think Mark'd be able to take a night off once in a while." Lute's voice was both condemning and friendly. "He'll lose you, if he don't make out to give you a good time!" He laughed loudly.

"He's awful busy," Nan said again; but she knew it was not enough this time.

It was only a few days later that Nan found Lute out by the steps.

"'Lo, Nancy! Just going by, so I thought I'd say 'Howdy'!"

Toward the end of the next winter he was saying to her:

"Mark's got no right to keep you penned in here—no fun or anything! You come along of me, girl, and we'll show 'em how to have a good time, eh?"

It was the Ramer in her that made her listen. But the Wainwright still resented him. She had gone, twice now, to dances in town, had lied about them, and hated herself for it.

Then he was asking her, definitely, to

To Start at Once!

100 "Better than Average" MEN

RAY C. HAHN
Sales Director

AT last, for a limited time, the opportunity is open for one hundred high quality men to enter one of America's largest selling organizations! The overwhelming, nation-wide demand for Fire Protection has forced the Fyr-Fyter Company to enter the greatest expansion program in its history. An immediate addition of 100 men is necessary to handle the tremendous volume of business that has literally swamped the present sales organization. Steady Employment Guaranteed! $350 to $600 a month made by our men. No wonder that we can make such an amazing guarantee when a man like Frank Depris, Ohio, earns $7,500 per year; L. D. Payne, Iowa, made over $4,500 his first 200 days; Louis George, Illinois, has averaged over $10,000 a year for the past three years!

AMAZING NEW PRODUCT

Fyr-Fyter Engineers have discovered an entirely new Fire Extinguishing Fluid that is changing Fire Fighting methods of the country! Snuffs out fire in one-third less time than other extinguishers.

NO EXPERIENCE NEEDED

Intensive national advertising furnishes you with prospect names. State laws, city ordinances and insurance regulations actually *force* big orders. The United States Government and the largest corporations are among our customers.

WRITE TODAY

Openings are limited. We prefer men who can devote full time to this work,—but men of the right kind who can start spare time will be considered. This is an unusual opportunity to have a thriving business of your own. Write at once to

RAY C. HAHN, Sales Manager
FYR-FYTER COMPANY
1-F Fyr-Fyter Bldg., Dayton, Ohio.

The Business for You

Making and selling Crispettes. A business to enthuse over. **$351** cleared in one day, writes W. H. Adams. California man reports **$11275** sales in three months; New Jersey **$4000** profits in two months; Pa. **$3000** profits in four months. Ira Shook **$365** sales in one day. Bram bought one outfit April 5 and **7 more** by August. Iwata bought one outfit and **10 more** within a year. J. R. Bert says "only thing I ever bought that equaled advertisement." John Culp says: "Everything going lovely. Crispette wrappers all over town. It's a good old world after all". Kellog, **$700** ahead end of second week.

Wholesale or retail. Big profits either way. No town too small. Business is pleasant, fascinating and dignified. You manufacture a food product

WE START YOU IN BUSINESS

Furnish secret formulas, raw material and equipment. Little capital required; no experience needed.

Build a Business of Your Own

No limit to the sale of Crispettes. Everybody likes them. It's a delicious food confection. Write for facts about a business that will make you independent. Start now, in your own town.

Profits $1000 a Month Easily Possible

Send postal for illustrated book of facts. It contains enthusiastic letters from others—shows their places of business, tells how and when to start, and all information needed. Free. Write now!

LONG-EAKINS COMPANY

go away with him. He knew of a "tea route" up in York State he could get.

"It's a crime, a girl like you wastin' herself up Ellis Run!" he said.

Across the ache of her loneliness the ugly tinsel of her other years had taken on the luster of gold, and her young feet, used now only to dull farm tasks, twitched to dance again. Still, she did not think of going—not really.

But two things happened:

Mark's Aunt Julia came for a visit. She was a faultfinding woman, but Nan might sometimes have borne with her, for Mark's sake. Not this time. Aunt Julia snooped everywhere—cupboards, cellar, bureau drawers, thoughts.

"When my sister was alive, quilts never got put away in this fashion," she would say. Or, "Good land, Nan, don't tell me this is Charity's best snowdrop linen tablecloth—all holes this way!"

But Aunt Julia finally went too far:

"Let's see . . . you and Mark been married six years now, ain't you?" she said. "Ought to have a family by now. Don't seem fair to Mark, you not having any babies."

Nan flew 'round, hot with fury, from the kitchen stove.

"Oh, you meddlesome old fool!" she cried.

Mark heard of that; Aunt Julia took pains that he did. And Mark undertook to reprove Nan.

Nan said things then that only years could heal, and Mark the same.

The other happening was Mark's bringing home of a little white kitten.

"The fellows were teasing it down in the store," he explained. But he said it as if he did not expect her to appreciate it, after all. He did not see her eyes, defiant and starved, as she took the kitten up in her arms.

"Thought I'd like a cat to fuss over, anyhow," he blundered on. "I suppose you think it'll be just underfoot, and no matter if it was pestered down to the store. But I want something alive around!"

Something seemed to freeze inside Nan at that. So he had never known how she had loved the black kitten? So he had never seen her grief at its death? Did he think *she* didn't want something alive around?

SO, THE next day, she said to Lute: "I'll go with you if you want, Lute. There ain't any use staying here, I guess."

She was to meet him next afternoon, down around the bend.

She made all preparations, her heart like a stone. She baked up a few things, ahead, for Mark. She washed a couple of flannel blankets. She mended her one pair of silk stockings. She fixed a little bed, with an old quilt and a box, behind the kitchen stove, for the white kitten.

The farm had never seemed more ugly to her than it did that morning. But she suddenly knew she had to tell Mark she was going. He wouldn't care; but she had to tell him.

That's what *he* would do; he would not sneak off, as she was planning.

When Mark came in to dinner, she had words all ready. But she could not say them. Mark looked tired, somehow; tired and old. But when dinner was finished, she told him.

"Mark—I'm goin' away—with Lute Lory—this afternoon!" There, she had said it! She felt squeezed all over, and yet at the same time a burden seemed to roll from her, as if she had owed a big debt and had suddenly paid it all. He was staring at her—his face white, his eyes queer. But he struck back.

"Yeuh? Well, I might have expected it, I suppose!"

Was that all there was to be of it?

"I—I thought I'd ought to tell you—" Her voice seemed lost, no expression in it.

"Don't see what you bothered to do that for," he said evenly.

"Oh!" she caught her breath sharply. "*Oh!* Neither do I! Neither do I! It don't make no difference to you, either way; I know that well enough! Only—I thought—mebbe—it would make a difference whether I *told* you or not! I see it don't anything matter to you any more! Well—I'm going, anyhow!"

"DON'T make no difference to me, uh?" A fire seemed to make slow, painful burning through his numbness. "Guess I'd have gone myself, long ago, if that was so," he said. "What do you think I married you for, anyhow? Don't make no difference? You think that, do you?"

He did not give her a chance to answer. He pushed open the screen door, and was gone—to his plowing.

She washed up the dishes, went up and got her suit case. There was no more she could do. No more. She just wasn't his kind, she never had been. They were well rid of each other. Down in the kitchen again, she went to the cellarway and skimmed off some cream into a saucer for the white kitten.

She fixed the fire, picked up her suit case and went out of the house and down the road. She had curled her hair elaborately and shortened her skirt. She looked a girl still.

So he didn't see why she had bothered to tell him? He didn't see! Well, maybe it had been foolish. Probably had! He might have expected it of her? Why might he? Hadn't she stayed there for five years after he had stopped loving her? Hadn't she tried to think things out his way? Hadn't she? But she couldn't. She belonged to a cheap run of folks, and you couldn't make yourself over. Not when you were twenty-seven.

Still, if *he* had tried, she would have seen. Or, would she? Maybe he had—maybe she had just exasperated him so that he couldn't stand it. There was that time he had said, "I know you hate this place, Nan; but it's into my bones, don't seem as if I *could* go any place else!" If she had said then, "I wouldn't hate it if I thought you cared about me like you used to!" would that have helped, made things more honest between them?

Honest—honest—honest—her feet seemed to beat the word along the soft dirt of the roadside. Mark seemed to depend so on folks being honest. But he'd been brought up to it. Maybe he had not understood how hard it was when you had never thought it necessary to be honest, all your life. Maybe she ought to have tried to tell him that.

But she couldn't now. It was all done. Around the bend was Lute. . . . Oh, she would dance—every night and every night—to make up for all the nights in the

Digitized by Google
Original from UNIVERSITY OF IOWA

gray, dreary old farm—oh, but she'd dance! But her feet felt heavy.

She came to the little knoll, passed it. She would have a pink dress and satin slippers! She was done with all that, done with it; she would never again rise at five to help with the milking! She would never sit there by the kitchen fire sewing, and look up to see Mark's indifferent face above his book. Never.

SHE looked back, stopped dead still in the wayside mud to look. It was all just as always. The gray house with its neat yard, its great pleasant maples, now red with small new leaves, its red barn, its clump of woods beyond. The watering trough. The mail box that held so little mail. The black furrows of the new-plowed fields. The dogwood trees at the fence corner. The hepaticas back under the trees. The robins dropping to turned sod. The birch trees on the knoll.

But it was not as always, either. It seemed to Nan Wainwright that she had never seen it before. Over the gray house rested a soft air that made it look like home. From the black rows came a smell, a smell that was sweet, that made you want things in a happy way. The red maple tips swayed a little in the warm wind, and it was a friendly gesture, and beautiful.

The birches—"kind of pretty," Mark had called them; they were! So white and slim and "kind of alive"! They seemed to move in a faint mist of green—lovelier than—than pink satin! Into her face came a dull red and her heart began to pound strangely.

For she knew suddenly that she was seeing the farm as Mark saw it. She had never seen it that way before, not even at first. Her hands on the suit case began to tremble. *Honest, honest;* she ought to let him know. "I know you hate this place," he had said. She didn't hate it, not a bit now, though she was leaving it forever. She ought to tell him that.

If she went back and told him that, maybe he would see—really see—that she was trying to be honest, to do things his way, to think about things as she'd ought to! Her feet began to move up the road toward home.

He would be up in the field; she would have to go to him there; he would think it queer. But she had to tell him—if only he would look at her then as if he saw her, as if she were a human being like himself, as if he had some respect for her. She had started wrong—about the tie. But she knew better than that now.

She came toward the house. Then she saw Mark, in from the field, sitting on the back steps. His black head was bowed on his knees. Cuddled against his shoulder was a little ball of soft white—the kitten! Nan felt her throat pull together as with a puckering string, and something hot stung down across the red spots on her cheeks. *What do you think I married you for, anyhow?* Why, he had married her because he loved her! *He still loved her!*

There was desolation in him as he sat there, alone, with the white kitten. And that manifest desolation told her more than hours of words might have done.

"Mark!" she called. "*Mark!*" She dropped the suit case and began to run toward him.

20,785 men and women wrote this prescription for themselves*

. . . and found complete relief

MOST of these 20,785 men and women sought relief in various ways. But their indigestion persisted.

The finger of suspicion pointed to caffein in their cases. So they tried the simplest prescription of all. They eliminated caffein from their diet—made Postum their mealtime drink instead for thirty days.

The results were astonishing. Indigestion disappeared! And with it, headaches, nervousness, sleeplessness! They ate heartily—slept soundly—looked and felt years younger! Postum became their mealtime drink *for life!*

Perhaps you have suffered from mysterious flurries of indigestion, and from the headaches and nervousness that go with them, without ever blaming caffein. Make the test these others made—let Postum be your mealtime drink for thirty days. Then note your improvement! See what a world of difference this one simple diet change can make!

For Postum has no after-effects! It is made of roasted whole wheat and bran—no trace of any artificial stimulant in it! A drink that's hot and appetizing—with a rich, full-bodied flavor millions prefer to that of any other drink.

Carrie Blanchard, famous food demonstrator, makes you this offer to start you on the 30-day test.

Carrie Blanchard's offer

"Let me send you, free, one week's supply of Postum, with my personal directions for preparing it, as a start on the 30-day test.

"Or if you would rather begin the test today, get Postum at your grocer's. It costs much less than most other mealtime drinks—only one-half cent a cup.

"Please indicate on the coupon whether you prefer Instant Postum, made instantly in the cup, or Postum Cereal, the kind you boil."

Sunset Pass

(*Continued from page 61*)

well, I never got on the horse again."

"Your world revolves around your brother Ash," mused Rock. "Well, some day I'll put you up on Egypt, right here in your yard. . . . And some other day, maybe, I'll give him to you."

"Oh! . . . You couldn't—and I couldn't accept. . . ."

She was silent a moment, evidently not quite sure how to take him.

"I asked Al what you did when you found out Ash took your horse," she went on presently.

"What did Al say?"

"He said you were thunderstruck. And you swore something terrible."

"Al told the truth, Thiry," admitted Rock, with reluctance. "I never was so surprised—never so furious. New trick on me! My beautiful horse—that *you* had named, taken from me."

"Mr. Rock, you see then . . . how impossible Ash is!"

"Nobody or nothin' is impossible."

"Dad says the man doesn't live who can stand Ash's meanness."

"Well, I'm livin', and maybe I can. . . . You saw him this mornin'?"

"Yes. I was up early, helping Ma get breakfast. When the horses came up it wasn't light yet. I heard Dad jawing somebody. Then Range came in, and told us. When Ash came in I asked him why he'd stolen your horse, and what he meant . . . to do with him."

Here emotion accompanied Thiry's speech; she grew husky, and faltered:

"'Luce told me he'd called the hoss Egypt, which was your pet name,' said Ash. 'That's why I took him, an' that's why I'm goin' to break a leg for him.'"

ONLY Rock's powerful hold upon himself, fortified by hours of preparation for anything, kept his anger within bounds.

"All because I gave him your pretty name! Tough on the horse. . . . And you were afraid to open your mouth! . . . Much you love Egypt!"

"Wait a minute, will you," she answered, not without anger. "I pitched into Ash Preston as never before in our lives. I—I don't know what all I called him. He took it—and, oh, he looked dreadful. But he never said a word. He got up, nearly overturning the table, jumped on the horse, and was gone like a white streak."

"I stand corrected," replied Rock thickly. "I talk too quick. I'm sure glad you had the nerve to call him. If you hadn't . . . Well, Thiry, I suppose you want to know what I'm goin' to do about this horse deal?"

"Worry over that has made me sick all day. I don't want to hear; but I must."

"When Ash gets back, I'll go up to him nice and pleasant. I'll say, 'Look here, cowboy, if you want to borrow my horse, ask me for him.' "

"Suppose he comes back without Egypt?"

"Then I think I'd better pass it off as if nothin' had happened. I'd ask your father. And if Egypt was crippled, I'd go find him and end his misery."

Digitized by Google Original from UNIVERSITY OF IOWA

There followed a long silence. Then, "Mr. Rock, you—you were to tell me something to-night?" she began nervously. "You needn't tell me. I can feel it. . . . You're not going away."

"No!" he replied, with a ring in his voice.

"Oh—Mr. Rock, I feared you wouldn't. All day long I've felt it. But, oh, if you only knew! It's not all for Ash's sake that I ask it. But for Dad and Mother, Alice and Lucy—for me!"

"Thiry," said Rock, with deep feeling, "last night I almost gave in to you. It was terribly hard not to. But to-night I have hold of myself. You can't persuade me. You can't drive me. I shall stay. I've thought all night and all day. Out of this torture have come two facts, which I believe as I do my own soul."

"What are they?" she asked.

"I believe I can serve you best by stayin' at Sunset Pass."

"And the other?"

"I love you."

SHE flung out her hands, protestingly, imploringly, as if to ward off some incomprehensible peril.

"Mr.—Rock!" she gasped. "You dare make love to me, when we've never been together an hour, when I'm insisting you leave my home!"

"I'd dare that, yes, under any circumstances," he retorted coolly. "But, as it happens, I'm not makin' love to you. I'm tellin' you a simple fact. I'm not likely to annoy you with it soon again. You'll hear gossip about me and my love affairs, which you can believe if you like. But I know now I never had a real one before. It suits me to stake what I think I've become against the old True Rock. This needn't worry you one little bit."

"You speak in riddles," she replied incredulously. "How can I help but—worry—now, more than ever?"

"I shall leave you blissfully alone. I shall hardly be even polite if I see you at mealtime. Your brother Ash will soon see that there's one rider who's not mushy over you."

"To what end?" she went on sharply. "Is that to deceive Ash, so you can stay here?"

"Partly. But I'm bound to confess that it's to spare you."

"Oh, you're not going to spare me," she cried. "You'll not leave me alone. And, even if you did, Ash would believe it only a blind—that you were with me during his absence. It's a poor plan. Please give it up."

"No."

She began to twist her hands in her white gown. The agitation which before he had marked was possessing her again. The idea that he had decided to stay at Sunset Pass held some singular dread for her. And while he weighed this in mind, he watched her with penetrating gaze, steeling his heart against the tenderness that threatened to overwhelm him.

WITH evident strong effort she controlled some almost irresistible fear or conflict. Her glance changed to one of deep and unfathomable mystery. She had discovered a latent strength. Rock divined she had been driven to extremity. And he grew sickeningly sure that she was involved somehow with Ash and her

Attractive Feet

lose their charm by crooked heels—

CROOKED heels or "run-over" shoes rob the shapeliest feet and trimmest ankles of their charm. Your whole appearance suffers.

Why spoil the grace of your movements, throwing your body out of balance, and causing your ankles to wobble, weaken and thicken?

Correct this fault by wearing Dr. Scholl's Walk-Strate Heel Pads. They equalize the body's weight, remove all strain and make walking a pleasure. You save more than their cost in heel repairs alone, and preserve the shape of your shoes. Quickly attached inside any shoe. Sizes for men and women. At all shoe and dept. stores, and leading drug stores—35c. per pair.

Write Today for new booklet, "The Art of Story Writing." No obligation—booklet is free. Special offer is now being made. Also special course in English. Write Today—NOW! **HOOSIER INSTITUTE, Short Story Dept., Dept. 1066, Ft. Wayne, Indiana.**

STATEMENT of the ownership, management, circulation, etc., required by the act of Congress of August 24, 1912, of The American Magazine, published monthly at Springfield, Ohio, for April 1st, 1928. State of New York, County of New York—ss.: Before me, a notary public in and for the state and county aforesaid, personally appeared A. D. Mayo, who having been duly sworn according to law, deposes and says that he is the Business Manager of The American Magazine and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management (and if a daily paper, the circulation), etc., of the aforesaid publication for the date shown in the above caption required by the act of August 24, 1912, embodied in section 411, Postal Laws and Regulations, printed on the reverse of this form, to wit: 1. That the names and addresses of the publisher, editor, managing editor, and business manager are: Publisher, The Crowell Publishing Company, Springfield, Ohio; Editor, Merle Crowell, 250 Park Avenue, New York, N. Y.; Managing Editor, James C. Derieux, 250 Park Avenue, New York, N. Y.; Business Manager, A. D. Mayo, 250 Park Avenue, New York, N. Y. 2. That the owner is: (If owned by a corporation, its name and address must be stated and also immediately thereunder the names and addresses of stockholders owning or holding one per cent or more of total amount of stock. If not owned by a corporation, the names and addresses of the individual owners must be given. If owned by a firm, company, or other unincorporated concern, its name and address, as well as those of each individual member, must be given.) The Holding Corporation of American Lithographic Co., New York, N. Y.; Bankers Trust Company, Trustee for Anna Wright Hazen, New York, N. Y.; Bankers Trust Company, Trustee for Ella Gardner Hazen, New York, N. Y.; Bankers Trust Company, Trustee for Dorothy Hazen Soest, New York, N. Y.; Employees' Savings and Profit Sharing Pension Fund of The Crowell Publishing Company, New York, N. Y.; Flora E. Whiting, Josephine E. McFadden and Henry G. Shackno as executors under the Last Will and Testament of Louis Ettlinger, deceased, New York, N. Y.; Gardner Hazen, New York, N. Y.; George H. Hazen, New York, N. Y.; Gertrude B. Lane, New York, N. Y.; Anne Payne Maxwell, New York, N. Y.; Publication Securities Corporation, New York, N. Y.; Mrs. Margaret R. Thompson, New York, N. Y.; Samuel Untermyer, New York, N. Y.; Alanson H. R. Wilson, New York, N. Y. 3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent or more of the total amount of bonds, mortgages or other securities are: None. 4. That the two paragraphs next above, giving the names of the owners, stockholders and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustee, hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association, or corporation has any interest direct or indirect in the said stock, bonds, or other securities than as so stated by him. 5. That the average number of copies of each issue of this publication sold or distributed, through the mails or otherwise, to paid subscribers during the six months preceding the date shown above is——(This information is required from daily publications only.) A. D. Mayo, Business Manager. Sworn to and subscribed before me this 27th day of March, 1928. (Seal.) Mary L. Walker. (My commission expires March 30, 1929.)

NOTE.—This statement must be made in duplicate and both copies delivered by the publisher to the postmaster, who shall send one copy to the Third Assistant Postmaster General (Division of Classification), Washington, D. C., and retain the other in the files of the post office. The publisher must publish a copy of this statement in the second issue printed next after its filing.

father in something which would not bear the light of day.

"Trueman Rock, I want you to leave Sunset Pass," she said, leaning to him.

"So you've told me about a thousand times."

"Let's risk being discovered meeting at Wagontongue," she went on. "You can get work anywhere. We'll take Mr. Winter into our confidence. We can meet in his store and spend an hour or two in his office. Then I'll arrange to stay with Mrs. Winter all night when I come to town. You can meet me there too. I will go to Wagontongue every week."

"Why would you be willin' to do this unusual thing?" asked Rock, eager to lead her on and on.

"Didn't you say you—you wanted to be friends with me?"

"I sure did."

"It's your only chance. And I'm giving you that to get you—to persuade you to leave here."

"Thiry, I ask you again: *Why* do you want me to leave?"

"To keep you and Ash apart."

"Is that the only reason?"

"It's the—the big one," she replied, with both voice and glance unsteady.

"But that won't keep Ash and me apart. He will come to town when you do. He'll watch you."

"I'll choose the time when he is away with Dad. He won't know that I go to town."

"When he's away—where?"

"Why, on the range. Dad has large orders. The driving and—and the—the work will take up half his time from now on."

WHAT a child she was, thought Rock! As transparent as crystal water! But she was with a woman, with all a woman's power to surprise and waylay to attain her ends. He ruthlessly laid traps for her; but the sole reason was not only to lead her into betrayal.

"You would risk so much for me?"

"It's not for you, though I know I—I—*will* like you, if you let me. It's for Ash and Dad—all of us."

"It's very sweet of you, Thiry," he said, with just enough satire to belie the portent of his words; "but very little to risk my life for."

"No, Trueman, it may save your life."

"You call me Trueman?" he asked, amazed.

"Yes, Trueman. . . . We can deceive Ash. . . . The Winters will do anything for me. Ash will never catch us together."

"How long would you expect this to go on? And when it came to an end—and I worshiped you—what then?"

"I'd run the same risk as you."

"What of? Being killed?"

"No! No! No! You're tantalizing me. You know what I mean."

"Indeed I don't. Reckon some locoed cowboys would think you meant that you risked the danger of love."

"I meant just that, Mr. Trueman Rock," she blazed. "I'm human. And surely it is not beyond the bounds of possibility for me to—to love someone. Especially if he sacrificed for me—proved himself a man."

"Thiry Preston, are you offerin' such a hope to me?" he asked huskily.

"It's not a hope, but a chance—only a chance—and all I *can* offer."

"But a chance that means a lot," he went on, without remorse. "I could be with you alone?"

"Yes, as long as you wished."

"Could I make love to you?"

"How could I keep you . . . from it?"

"Would you let me kiss you?"

"Yes," she replied, white-faced and calm.

"Would you kiss *me* . . . now . . . to seal the compact?" he went on, as mad in the ecstasy of the moment, as stern to convict her.

"You drive a hard bargain," she murmured bitterly. "I've never kissed any man save Ash and Dad. . . . But I will kiss you."

She stood up, took brave, but hesitating steps, until her knees pressed against his, and as she bent over instinctively her hands went out. Rock saw them trembling. She was going through with it. A moonbeam caught her face. Rock, uttered a cry of poignant repentance. One second more would make it too late.

He seized her hands, and bending his head he kissed one and then the other.

"Thiry," he whispered, "I would give almost my very life to have you kiss me. But not for this. . . . I led you on. I wanted to see how far you would go. You poor, loving, blinded girl! What would you not sacrifice for this cursed Ash Preston? I will stay here! You have no idea what a horrible temptation you gave me. To meet you often—to have you alone—to be able to kiss you! *Thiry!* I could make you love me. . . . But, so help me heaven, I wouldn't have your love at such sacrifice. I'll win it square and fair—or never. Now, I'll go, and I'll not speak to you soon again. Trust me, Thiry. Good night."

He kissed her hands again and rushed away into the moon-streaked shadows.

FOUR days passed, days full of hard labor for Rock and pondering thought, and slow, absorbing adaptation to the most difficult and strangest situation he had ever encountered. Early at breakfast and late at supper, he saw Thiry, but only to exchange a greeting. He did not look to see if she looked at him, though curiosity and longing consumed him.

By doing most of the fence work, he made himself more than solid with the three brothers. He let them ride off up into the timber to cut pine saplings and snake them down to the pasture, while he dug the post holes and built the fence. Opportunity would some day come for him to ride down to the old well on Slagle's ranch, and find out what was in it.

On the fifth morning Al remarked laconically, "We sure gotta hustle to-day, for Pa will be home."

"Why the particular hustle to-day, Al?" queried Rock.

"Pa has a way of slippin' up on us, an' it'd sure never do to be ketched loafin'. He wouldn't let us go to the rodeo and dance on the Fourth."

"I'd forgotten about that," rejoined Rock, with enthusiasm. "Are all the folks goin'?"

"Pa and Ma ain't goin', but sure the rest of us Prestons are."

"Includin' Ash?" asked Rock casually

"He never missed one yet that Thiry

went to—leastways a dance. Allie and the kids will stop at Leslie's. Thiry said she was goin' to Winter's. Reckon you'll ride in with us?"

"I'll ask your dad," returned Rock thoughtfully. It would be very much better, perhaps, for him to remain on the ranch. Yet the urge laid hold of him. He could take just a peep in at the dance, to see Thiry in a party dress.

"Reckon, on second thought, I will go," he said to Al.

Late in the afternoon the brothers left off work and rode home. This time Rock went with them. They reached the barns, to ascertain that Ash and the others had not yet come in. Rock, after caring for his horse, slowly sauntered up the slope to his cabin.

WHILE he was cleaning up for supper, he heard the clip-clop of trotting horses, then a rattle of wheels. With a start he went to the door. Scoot Preston was driving up on the seat of a big empty wagon. Two more wagons had topped the slope. Soon they halted before the cabins. Rock waited for riders to appear. And he was not disappointed. The burly form of the older Preston hove in sight, riding a roan, and leading two saddle horses. A little afterward, sight of Ash on Egypt shot a quick stab through Rock. Then next instant he relaxed. The white horse appeared tired, but none the worse for the absence.

"Aw!" exclaimed Trueman aloud, and his relief told him just how much he had cared. "Reckon I might as well go out and get it over."

But first he went inside. While pondering over how best to meet this situation, he had buckled on his gun belt. Suddenly the fact dawned on him, and he laid hard hands on the belt buckle. But he got no further. He had no right to face this vicious unknown problem, Ash Preston, without being armed.

Whereupon he strolled out leisurely. As he came in sight of the arriving Prestons, half way between the cabins, Gage spied him, and with a start he wheeled about from the family, who were welcoming him, to dismount like any cowboy, and hurried to intercept Rock. As he drew near his deep gray eyes betrayed considerable anxiety.

"Wal, Rock, how are you?" was his greeting, accompanied by extended hand. "The boys say you-all got on fine. I'm sure glad."

"Howdy, Boss," returned Rock cordially. "We got the fence job 'most done."

"Ha! You don't say? Wal, I'll be dog-goned! How'd you ever get thet out of them?"

Preston fell in step with Rock, and they approached the double cabin, where the women and children were collected. Ash was the only one of the returning brothers who got down on the ground.

"Cowboy, I shore hope you won't rile Ash—leastways hyar before the women," said Preston hurriedly.

"Don't worry, Boss," returned Rock, with a genial laugh. He had caught a glimpse of Thiry, who kept somewhat in the background.

Egypt was standing, bridle down, half way between Ash and the porch. One glance told Rock that he was gaunt, dirty,

Only a **Buescher**

GIVES YOU ALL THESE FEATURES

and rough, but apparently as sound as ever. He whinnied at sight of Rock.

"Howdy, boys," said Rock, nodding to the drivers on the wagons. Then, halting beside Egypt, he turned to face Ash Preston. Despite his iron control, a slight quiver stung his frame. How cool, intent, potential of evil menace this man! He stood at ease, hands on his hips, his black sombrero slouched back, his blue-flame eyes piercing Rock, as if to read his mind. Rock had met penetrating glances before; and this one shot little cold sparks along his marrow.

"Howdy, Ash. Did you like my horse?"

Not improbably that was the last query Ash Preston would ever have anticipated.

"Best hoss I ever forked," he replied, without feeling of any kind.

"Thanks. Hope you were good to him."

"Wal, Rock, the fact is I begun bad," drawled Ash. "But he piled me in the brush. An' runnin' him over rough ground didn't faze him none. An' I reckon I ended treatin' him good."

"Did he pitch with you?" queried Rock, in genuine surprise.

"He's got any outlaw beat I ever rode."

"Dog-gone! Leslie swore this horse never pitched in his life."

"Reckon that was no lie, Rock. But I nagged him. He threw me, an' I couldn't get near him again thet day."

"Served you right," responded Rock, naturally. "It doesn't pay to be mean to horses. And, see here, Ash, don't go borrowin' a horse from a rider without askin' him."

The tension relaxed, the charged atmosphere lost its fullness and suspense. Ash, though he betrayed little of what might have been his true state, eyed Rock with s'ow, cool smile, and slouched with clinking steps to the porch.

Thiry met him, reached for him in glad excitement:

"Oh, Ash, I'm glad you're back—and you—and everything all right!"

Ash wrapped his long arms around her, and hugging her closely he bent his head over her. The action seemed eloquent, beautiful, and yet it pierced Rock like fire. Bending down to feel the legs of his horse he kept that posture until he had recovered. Without a glance backward then, he led Egypt down toward the barns.

ROCK spent so much time caring for Egypt, cleaning and brushing him and making him a comfortable bed of grass in a stall, that it was dark when he got back to his cabin, and the supper bell was ringing. He hurried out, but fortunately he did not arrive late, as the Prestons were just seating themselves at table.

For the first time in five days, Rock looked deliberately into Thiry's face. She gave him a grateful smile, wistful and wondering, as if she would make amends for doubt. It softened Rock, and though he did not glance at her again he managed to get through the meal cheerfully. Afterward, to his relief, Preston called him into his cabin.

"Have a drink with me, Rock," invited Preston.

"Sorry, Boss, but I've quit."

"Have a cigar then. I shore recommend these."

"Thanks," replied Rock. "Did you have a successful trip?"

"Best ever; but thet won't interest you," returned Preston briefly. "I'll say, though, thet when the trip ended hyar I was some worried. An' when I seen you packin' a gun, I was scared stiff."

"Sorry, Boss, but that oughtn't to have bothered you. It's just habit."

"Ahuh!" returned Preston, giving Rock a dubious look. "But it was hard to figger you. Ash shore wasn't able to. An' you clean knocked the pins from under him. He didn't, an' neither did any of us, expect you to take thet dirty deal so nice an' friendly."

"What else could I do?" demanded Rock, spreading wide his hands. "I came out here to make friends, not enemies."

"Wal, I'm shore thankin' you. You've got Ash stumped. I heard him ask Lucy if you'd been runnin' after Thiry."

"Humph! What did Lucy say?"

"Lucy said you hadn't—thet you were seldom hyar, an' then never paid no attention to Thiry. Is thet so, Rock?"

"Reckon it is, since you left."

"You and Thiry quarreled, I take it," went on Preston. "She didn't say so, but she has a way of makin' the boys leave her alone. I didn't think you'd be so easy, an' I'll gamble it won't last. Just before supper, Thiry told me you'd acted wonderful with Ash—thet she'd misjudged you. Don't remember when I've seen the lass so strange. The truth is, Rock, I think she likes you. You've shore begun right, if you're in earnest about her."

ROCK could scarcely believe his ears. Yet there was no mistaking Preston. He implied even more than he said.

"In earnest? Good lord, I wish I knew how to tell you how earnest I am."

"Wal, I reckon now I savvy why you met Ash thet way. Rock, you're an upstandin', fine chap, an' I like you. So don't be backward tellin' me just how you feel about Thiry."

"Preston, the minute I laid eyes on Thiry, I fell in love with her. And it's changed my whole life. I used to be a free, careless hombre, runnin' after girls, ridin' here and there, drinkin', gamblin', fightin'. But that's past."

"Thanks fer talkin' out," rejoined Preston, bending deep, inscrutable eyes upon Rock. "'Course you mean marriage, cowboy?"

Rock jerked in his chair; his face reddened. "Preston—I never let myself have—such hope," he burst out.

"Faint heart never won fair lady," quoted the rancher. "Declare yourself like a man, if you want my interest."

"Boss—I—don't quite savvy," replied Rock, uncertainly. "What more can I say? . . . Lord, I never dared even dream of Thiry as my wife."

"But you'd like to marry her?" queried this astounding ranchman.

Rock stared a moment: "I'd be the happiest and luckiest fellow on earth."

"Wal, thet's talkin'," returned Preston gruffly. "Do you want my advice?"

"Preston, I—I'd be most grateful for anythin'."

"Thiry ought to be told."

"Aw, no! . . . So soon? Before I've proved what— It'd only distress her—do my cause harm."

"Cowboy, you don't know women," said Preston. "The very fact that you

3 to 35 M.P.H.

Four "Twins" 2½ to 16 H. P.

SPEED, sport, pleasure—never before have Evinrude motors given so much of each. Four remarkable twin cylinder models:

Speeditwin—16 H. P., only 85 lbs., 6 to 35 m. p. h. Power increased 100%.

Fastwin—12 H. P., only 69 lbs., 5 to 30 m. p. h. Power increased 200%.

Fleetwin—6 H. P., only 55 lbs. A new motor ideal for family row boat. 4 to 25 m. p. h.

Sportwin—2½ H. P., only 44 lbs. World's finest light twin, recommended where younger children use motor. 3 to 13 m. p. h.

Evinrude Boat Speed Guide tells you exactly which motor to buy to give you the speed you want on the boat you own. Insurance policy against fire and theft from $1.10 to $2.10, depending on your model.

Time payments—as small down payment as $31.10 puts an Evinrude on your boat.

Travel the D&C LAKE LINES

Great Lakes First!

D. & C. Steamers Guided by Radio Compass Signals

To Lovers of Sea, Sky and Drifting Clouds:

Summer is just around the corner, and it is in order to suggest a cruise on the Great Lakes as part of your vacation.

We would be pleased to help you plan an outing of two, four, six or eight days' duration on the Lower Lakes, and supply you with pictures and descriptions of pleasant places: Niagara Falls, Mackinac Island, and others.

If you contemplate an automobile tour, plan to make part of the journey by boat. Our overnight service between Buffalo and Detroit; Cleveland and Detroit, is used extensively by automobilists. If you desire a longer voyage our line between Cleveland and Chicago, via Detroit, Mackinac Island and St. Ignace, will appeal to you. Dancing, concerts, radio entertainments, deck games on shipboard—not a dull moment.

A. A. SCHANTZ, *President.*

D&C Lake Lines

Fares: Buffalo to Detroit, $5; Cleveland to Detroit, $3; meals and berth extra. For the Chicago-Mackinac Island tours fares given are for the round trip, and include every expense on steamers: Buffalo to Mackinac Island, $49; to Chicago, $79. Cleveland to Mackinac Island, $41.50; to Chicago, $71.50. Detroit to Mackinac Island, $30; to Chicago, $60. Stopovers at Mackinac Island and other ports. For reservations, address E. H. McCracken, G. P. A., Detroit and Cleveland Navigation Co., Detroit, Mich.

Fast freight service on all divisions at low rates.

Eat and Be Well!

A condensed set of health rules—many of which may be easily followed right in your own home, or while traveling. You will find in this little book a wealth of information about food elements and their relation to physical welfare.

CONTROL YOUR WEIGHT WITHOUT DRUGS OR TIRESOME EXERCISES

Effective weight control diets, acid and bland diets, laxative and blood-building diets, and diets used in the correction of various chronic maladies.

The book is for FREE circulation. Not a mail order advertisement. Name and address on card will bring it without cost or obligation.

Health Extension Bureau
214 Good Health Building, Battle Creek, Michigan

came to me an' declared yourself, straight like your name, will go far with Thiry, an' all of us 'ceptin' Ash. An' even Ash couldn't help but see thet was right. He beat a cowboy once who dallied after Thiry without talkin' marriage."

"Like as not he'd try to beat me—if I did tell her."

"Wal, I'm appreciatin' your fine feelin's, Rock, so I'll tell her myself," replied the rancher and, turning to the open door, he called, "Thiry."

"Preston!" gasped Rock, rising.

THEN, standing as if paralyzed, he heard light, quick footfalls. And immediately the dark doorway framed a slender form in white, with wistful, expectant face, and great doubtful eyes.

"Come in, lass, an' shut the door," said her father.

She complied, and came forward hesitatingly, her glance going from her father to Rock.

"Thiry, come hyar," he went on; and when she drew close he put an arm around her. "Do you see thet big cowpuncher standin' over there?"

"Yes Dad; I couldn't very well help it," she replied, and she just escaped being demure.

"Sort of pale round the gills, ain't he?"

"Dad, I—I'm afraid he looks a—a little guilty."

"Wal, it's not exactly guilt," laughed Preston. "Lass, Rock has asked your hand in marriage—an' I've given it."

"*Dad!*" she whispered, and leaned against him as if suddenly bereft of strength. Then she rallied, while the scarlet waved up from neck to cheek. "Are you crazy, or am I? You couldn't joke—"

Her blazing eyes flashed in doubt and fear from her father to Rock.

"Miss Thiry," replied Rock, finding himself under those wonderful eyes, "this is the most solemn—and terrible moment of my life."

Slowly she released herself from her father's arm, with widening, darkening eyes, that seemed fascinated by Rock.

"Reckon it's sudden, lass," spoke up Preston. "But thet's this cowboy's way. An' he comes straight to *me*. I like thet. Your ma will, too. when I tell her."

"What do you think—*Ash* will say?" she broke out.

"Ash? . . . Wal, child, he's not your dad or your boss. You're no kid any more. You're a woman, free to do as you want. You shore don't have to ask anythin' of Ash."

"Father!" cried Thiry, incredulously, almost with horror.

In that exclamation of protest, of unbelief, of consternation, Rock delved further into this Preston mystery. It seemed to betray Preston's guilt along with that of his son, and Thiry's knowledge of it.

"Wal, lass, will you answer Rock now or do you want some time to think it over?" asked Preston coolly, unabashed or unconcerned by her agitation. He was deep. He was playing a game that Rock sensed but could not fathom. His effect upon Thiry was also beyond Rock's ken.

"Mr. Rock, I thank you," said Thiry, through trembling pale lips, "for the honor you do me. . . . I'm sorry I cannot accept."

Rock bowed, with what little dignity he could assume.

"Thiry, wait a minute," said her father, as she made for the door. He caught her and held her, unmistakable affection in his grasp. "I'm sorry to upset you. But these things will happen. Don't think your dad wants to get rid of you. I'm powerful fond of you, Thiry. It's only thet lately— Wal, I don't want to worry you about what might happen to me. I might not always be hyar to take care of you. I'd like to have your future settled before—before long. An' Rock struck me about right. . . . Aw, there you're cryin'. Wal, run along. I shore can't stand a cryin' woman, not even you. An' it's no great compliment to Rock."

Thiry held her head high as she walked by Rock without giving him another word or glance, and he saw that she was weeping.

"Preston, I ought to knock the daylights out of you," declared Rock wrathfully when Thiry was gone. "If I ever had any hope to win Thiry, it's sure gone now."

"Much you know about women," said Preston. "I had a hunch Thiry took a shine to you, an' now I know it."

"Man, you're drunk or crazy, as Thiry said."

"Wal, Rock, if she hasn't before, she will now," replied Preston, imperturbably. "She knows now you want to *marry* her. Thet always fetches a woman, provided she ain't in love with someone else. Have another cigar, cowboy. I see you mashed thet one."

Rock discovered that not only had he crushed the cigar but he had burned his fingers.

"Preston, I can't be mad at you, but I sure want to be," returned Rock, resigning himself.

"SET down. I want to talk to you," said the rancher. "You'll shore be goin' in to town with the rest of the outfit. They're leavin' day after to-morrow. Thet reminds me. I run into that pretty Mrs. Dabb, an' she said to tell you to be shore an' come to her dance. She's havin' the new town hall decorated."

"Well, in that case, I might go," replied Trueman thoughtfully.

"Say, cowboy, wasn't this Dabb woman an old flame of yours?"

"Well, she wasn't exactly mine, but that wasn't my fault."

"Ho! Ho! I know the lady. Thet is to say, I've seen her with the cowpunchers. Reckon John Dabb was a darned old fool, marryin' thet young lady. . . . Wal, Rock, if she happened to be a little sweet on you yet, it'd shore be lucky fer you. It won't hurt your cause none to let my lass see other women like you."

"Boss, you must have been a devil among the women, in your day," said Rock slyly. "Now, how would you handle this particular case of mine, regardin' the dance?"

"Wal, as you're a handsome cuss; you want to make the most of your chance. It's to be a masquerade, you know."

"Masquerade? I sure didn't know."

"You get yourself up in some dandy outfit. Then, first off, be cold to Thiry an' sweeter'n pie to your old girl. But you want to be slick, cowboy. Don't carry it too far. Don't overdo it."

LACEY & LACEY 773 F St. Washington D. C.

Rock laughed. The absurdity of the thing so blandly suggested by Preston did not quite submerge a certain enticement. The nerve of it, the very audacity, the reckless assumption that he might make this wonderful girl jealous, took on him a hold hard to shake.

"Old-timer, I'm afraid I couldn't do it," replied Rock, with a grimace, as he flung his second cigar into the fireplace. "It'd be funny; it'd be great, if I dared. But I think I'll rustle now, before you get me locoed. . . . Good night."

As he opened the door abruptly, he almost bumped into Ash Preston. Rock could not help wondering if he had been eavesdropping.

TRUEMAN strolled in the black shadows of the pines near his cabin. The night was pleasant, the wind was at its old task in the tree-tops, the frogs along the creek were croaking drowsily of midsummer. The dark Pass, obscure and dreaming, seemed pregnant with life.

The plot had thickened, and Rock saw no way of extricating himself, even had he so desired. In some unaccountable way he had won Gage Preston's regard and friendship. Nevertheless, he concluded that Preston had some deep motive, beside a longing to see Thiry safely settled for life. What could that motive be?

Rock tried to give it up, and went to bed, where he listened to the sing-song of pines overhead. One by one Rock's thoughts brought him back to the conviction that Preston was deeply involved in crooked work, and that Thiry knew it.

He awakened at dawn with an idea which must have generated in his subconscious mind while asleep. And it was that he should start toward Wagontongue ahead of the Prestons instead of waiting until they had gone. He wanted to stop long enough with Slagle to dig through the husk of that rancher's provocative reticence. Likewise, he wanted to ride over that part of the range which had been the scene of Preston's latest labors. With Gage Preston at home, busy with manifold tasks left him, and his family on the road, there would be opportunity for Rock to confirm or disprove his suspicions.

At breakfast Rock asked permission to leave that day, instead of on the morrow, and it was readily granted. Saddling Egypt, and leading the rested and mettlesome horse up to the cabin, Rock tied a couple of blankets behind the cantle, and rode away under the pines without being noticed, so far as he could tell, by any of the family.

What he devoutly hoped was that Preston had not worked close to the Pass. The Flats, Rock had ascertained, were the wide, gray, cedar-dotted levels some miles this side of Slagle's ranch. Tom Preston had been given orders to drive the green wagon as far as the Flats. Trotting briskly along, his eyes ever and anon keen on the broad wheel tracks, Rock soon arrived at the bottom of the slope, where the ground spread wide and flat for miles.

He found where the wagon had left the road to halt in the first clump of cedars, and then it had gone on again, back to the road. A mile this side of Slagle's ranch,

"Good Bye, Boys!"

"Today I dropped in for a last word with the boys at the office. And as I saw Tom and Dave there at the same old desk it came to me suddenly that they had been there just so the day I came with the firm four years ago.

"When I started here I was put at a desk and given certain routine things to do. But after a few months I began to realize that I was nothing but a human machine and that I couldn't expect to advance that way.

"So I wrote to Scranton and arranged for a spare-time study course that would give me special training for our work. Why, do you know, it gave me a whole new interest in our business? In a few months I was given more responsibility and more money. Since then I've had three increases, six months ago I was put in charge of my department, and now my big chance has come—I'm to be manager of our Western branch at $5000 a year! It just shows what spare-time training will do."

If *you* want to make more money, show your employer you're trying to be *worth* more money. If you want a bigger job, show him you're willing to *prepare* for it.

There's a simple, easy way to do it. For 36 years the International Correspondence Schools have been training men and women right in their own homes whenever they had a little time to spare. Thousands of men and women have stepped up in just this way. More than 180,000 are studying now. Ten thousand are starting every month.

Can you afford to let another priceless hour pass without finding out what the I.C.S. can do for you? Here is all we ask—without cost, without obligation, mark and mail this coupon.

which was hidden in the rough hilly country west of the Flats, the wagon tracks, and hoof tracks of saddle horses, turned off the road. Rock did not care to follow them until the Prestons had passed, and even then he would be extremely careful how he did follow. Ash Preston might have eyes as good as his own.

To Rock's disappointment, he found that Slagle was not at home, and he could do nothing else but ride on, thinking that he might stop at Pringle's.

A COUPLE of miles down the road Rock met the wagon tracks again, coming from across the Flats.

"By golly!—looks like a short-cut, doesn't it? I guess not!" exclaimed Rock derisively. Then he discovered that these tracks were fresh, and made on the return home. The wagons had been empty. This was longer and harder going than 'round the road. Rock passed on a few hundred yards, to find where the Prestons had driven into the road on their outward trip. And still farther on he came to more tracks, older by some weeks.

After pondering a while, he decided he might safely risk some careful scouting around, provided he left no traces and kept keen survey of the several miles of road. With this in mind, he tied Egypt on hard ground and, taking to the thickest part of the cedars, he mounted the hill, then went on to the summit of the ridge.

The wind was strong in his face. It carried more than heat, and as he gained his objective point he both smelled and saw dust in the air. Then something faint, but raw, an odor that was tainted!

Eagerly Rock came up behind a cedar, and from this cover he peered out and down. The slope on that side sheered steep and rough, down to an open draw, up which his keen sight roved. This draw appeared pale green, with a dry winding wash in the center. It led up to a white pocket, where yellow water gleamed. Cows were bawling. White objects flashed in the sunlight, drawing Rock's gaze the quicker. Then he discerned a cabin and corral, covered with white spots; also, men on horses and on foot.

Rock slipped to his knees, and, crawling to a low, thick cedar bush, he half buried himself in it, and peered out. The white objects were cow hides, thrown over the corral fence, and nailed on the cabin, hair side down. There were seven riders, several still sitting their saddles, the others walking around.

One of the cowboys, a tall fellow wearing a red scarf, turned some of the cow hides over to look at the under side. Presently he and the others on foot collected in a group round their mounted comrades and talked. Watching like a hawk, Rock convinced himself that these riders were curious about Preston's butchering business, though nothing inimical to the Prestons manifested itself.

Rock strained his eyes to take in all details of that red-scarfed rider's appearance, so he might recognize him some day. But the distance was pretty far, even for his sharp eyes, and he could not be sure. Presently, the mounted riders galloped off, and those on foot took to their horses and followed. They rode up the ridge, westward from the cabin. The fellow with the red scarf, following last, halted on the brink of that pocket and took final survey of the scene. Then he followed after his comrades, who had disappeared over the ridge.

"Dog-gone!" muttered Rock, rolling out of his uncomfortable covert and wiping his perspiring face. "What to make of that? Maybe means nothin' an' then again—"

He counted the cowhides in sight. Thirteen! It was not a lucky number. But there might be several more hides on the far side of the log cabin. Even so, that was rather a small number, if the hides in sight represented all the beeves killed by Preston on this occasion. Preston had gone to town with three large wagons, one of which Rock had helped load with hides. The other two, of course, had been loaded with beeves. How many? That was something Rock wanted to know—and meant to find out. He retraced his way down to his horse, racking his brain the while.

No doubt at all was there that the cowhides in plain sight over in the draw bore one of the several Preston brands. If other stock besides Preston's had been butchered, which Rock did not doubt in the least, the hides with their telltale brands had of course been well hidden. Heads were easier to dispose of, and the risk of discovery through them was negligible.

Straddling Egypt once more, Rock rode down the hill toward Wagontongue. Cedars and brush grew densely at the foot of this slope, where the road crossed a culvert over a deep wash. Rock's eyes, bent on the ground, suddenly espied the heel imprint of a rider's boot. It stopped Rock. If he ever had occasion to study a track of any kind it became photographed on his mind. He had seen that heel track before. Slipping out of the saddle, Rock bent to scrutinize it. And he experienced a queer little cold chill.

The impression of the heel was well defined, but the toe part was dim. It pointed off the road. Rock found another like it, though not so plain. But for his trained eyes the trail might as well have been made in snow. It led into the coarse white grass, down over the bank, to the edge of the culvert, where it vanished.

THERE was no doubt in Rock's mind that this imprint was identical with the one near Slagle's well. He had the little sticks with which he had measured that track. Taking them out, Rock was about to go back and measure, when his instinct prompted him to take a look at the culvert, now that he was down there. He walked on, stepping on stones.

The culvert was not the handiwork of masons. The aperture was large, to take care of a considerable flow of water, during the wet season. Crude walls of heavy stone had been laid about ten feet high and the same distance apart. Logs and brush had been placed across the top. Above this a heavy layer of earth formed the road.

When Rock stepped into the mouth of the culvert he saw a lumpy floor, which at first glance he thought consisted of rocks lying on dried mud. A foot track, the one he was trailing, brought a low exclamation from his lips. Bending quickly with his little sticks he tried them. They fitted perfectly. Moreover, this one had been made recently.

When Rock rose from that track he knew what he was going to find. The tunnel appeared about a hundred feet long, with light shining in at both ends, and the middle dark. The numerous stones on the floor were of uniform size and shape, and he noted that the first of these lay back several yards from the opening of the culvert.

Rock kicked one. It was soft. Bending to feel of it, and to look at it more closely, he ascertained that it was a burlap sack tied 'round something. He laughed sardonically.

"Cowhide," he said, and went on, kicking to right and left. These stonelike objects all were hides tied up in burlap sacks. They were old. Some of them were rotting. Then, toward the middle of the culvert, where the bags were thickest, he found that those in sight were lying on a bed of bags, flat, decomposed. Altogether, hundreds, perhaps thousands of hides had been destroyed there.

ROCK went back to the point where he had found the boot track. If fresh cowhides had lately been deposited in this hiding place, where were they? Rock searched the ground more carefully. Back from the opening it was difficult to see well. Nevertheless, he trailed the heel track a third of the length of the culvert, toward its center.

Naturally then, he reached up to feel where he could not see. He had to put his toes in crevices between the stones to climb up and reach over the top of the wall. The thick logs placed across from wall to wall, and far apart, left considerable room along the top.

When Rock's groping hand came in contact with a sack he felt no surprise. This one was not soft. It appeared to hold heat. Grasping it firmly, Rock dropped to the ground and hurried with it to the light. He ripped it open. Quicklime, hot and moist! A fresh cowhide, wrapped with hair inside!

With hands that actually shook, Rock unfolded the hide. No slight thing was this proof of somebody's guilt—about to be disclosed! The brand was clear—a half-moon. Rock had never heard of it. He certainly knew all the old brands of that range.

He rolled up the hide, stuffed it in the sack, with the little quicklime he had spilled. And he put it back where he had found it. Then he struck a match. By the dim light he saw rows of burlap sacks, neatly stowed away.

Rock sneaked out of that culvert and into the cedars and 'round and up to his horse, as if indeed he were the guilty one himself. Not until he was riding away down the road, positive that he had been unseen, did he recover his equanimity.

That boot track had been made by Ash Preston. Rock knew it. Gage Preston was growing rich by butchering other ranchers' cattle. The very least implication accorded to Thiry Preston was that she shared the secret, and, therefore, indirectly the guilt.

And Rock loved her—loved her terribly now, in view of her extremity. When he got to that confession, he seemed unable to escape from the tumult and terror it roused in his mind.

"The Warm Harmonious Colors That Good Taste Demands"

are in these shingles of Everlasting Asbestos

Johns-Manville Asbestos Shingles on a Connecticut home. Below Hexagonal Shingles on a cottage.

THE outward appearance of your house has a large bearing on its value. Only when the roof has a substantial look, harmonious color, pleasing surface, can any house appear at its best.

Johns-Manville Asbestos Shingles have a charm which adds to the natural beauty of any house. As an architect has said, they have "the warm harmonious colors that good taste demands." But they have far more than their beauty. They are absolutely fireproof and they are permanent. Unharmed by burning embers, by sun or wind, rain or snow, they never wear out. These splendid shingles are as enduring on a roof as brick in a wall. Unobtrusive, yet with real personality of its own is the house which wears a Johns-Manville roof.

If you are building, these shingles will give you the roof you want, one worthy of your new home, one that will never have to be replaced.

If your home needs a new roof, Johns-Manville Asbestos Shingles will add a touch of youth and modernity, or will retain the impression of dignified maturity according to your choice of colors. And when you use these shingles you re-roof for the last time. The first cost of a Johns-Manville Shingle roof is low—and *it is the only cost.* The value of any house is increased by a roof of these permanent, substantial Asbestos Shingles.

Our Certificate System Puts Your Roof on Our Records

When your Johns-Manville Asbestos Shingle roof is laid you are entitled to our Certificate vouching for its genuineness. A copy of this goes into our permanent records and shows who laid the roof, and who sold the shingles. Thus, the responsibility is made a matter of record and you are protected from substitution. You can buy Johns-Manville Asbestos Shingles anywhere. Your roofer or contractor, or your dealer may not have them in stock, but he can get them from a Johns-Manville Distributor. You cannot afford to buy a temporary roof. If you have any trouble send us the name of your roofer. We will see that you have the shingles.

JOHNS-MANVILLE MASTER OF ASBESTOS

Johns-Manville is the world authority on everything made from asbestos. Pioneer developer of this remarkable mineral, Johns-Manville mines asbestos and makes from it hundreds of articles which contribute enormously to the comforts of modern life, and to the efficiency of modern industry. Among these asbestos products is Johns-Manville Asbestos Brake Lining.

Your motor car must have safe brakes. Your life and the lives of others depend on it. The heavy strain of present day driving, the stops in traffic, the speed on the open road make the sure grip and the high friction of Johns-Manville Asbestos Brake Lining a necessity. Don't gamble with the unknown. Demand Johns-Manville Brake Lining and see that you get it.

←*Asbestocel saves money*

Johns-Manville Improved Asbestocel on your heater pipes will insure a warm house for less cost. It will save tons of coal in a few years. When you buy or rent a house look for Improved Asbestocel on the heater pipes, and asbestos covering on the heater.

The Greatest Bridge in the World and the Man Who is Building It

(*Continued from page 34*)

That first year, we estimate, it will be used by about ten million vehicles. A few years more, and traffic will cross at the rate of seventeen million vehicles annually. But its capacity will not even then be taxed; for the main roadways of this bridge will be able to accommodate at least thirty million vehicles a year, to say nothing of trolley cars on the lower deck!"

What a feat! To suspend high in air a span that will leap at a single flight thirty-five hundred feet through space, and carry motor traffic and electric trains across that broad estuary, the Hudson! What a bridge! Outranking in magnitude all the seven wonders of the ancient world, it will stand as one of the great engineering achievements of mankind!

Now, in this great industrial triumph, this conquest of space, altitude, wind, water, heat and cold, scores of engineers, and thousands of other men, skilled and unskilled, will share; yet, in a sense, the whole project, a masterpiece of daring and simplicity in design, an epic of engineering construction, is the product of the genius of one man. And this man—Othmar H. Ammann—I found in the offices of the Port Authority of New York, where he holds the plain title of bridge engineer. Quiet, alert, keen-eyed, and sensitive, he is forty-nine years old. By engineering experts competent to judge, he is ranked as a genius—and for a reason that is worthy of note—*not because his design for this bridge of heaven-aspiring boldness calls for new and untried features, but because of the skill with which he has adapted all that has been learned from past works and experience.*

"GET all the experience you can," said Mr. Ammann at one point in our conversation. "That's the great thing. Learn from those who mastered your trade or profession before you. I have known many ambitious young men to fret themselves and waste their energies early in life because they could not achieve at once great things, for which, as a matter of fact, they were not prepared.

"It is true of other careers as it is of the engineer's—the first thing a man must decide is whether or not he has the ability to follow the calling he has chosen. Once convinced of this, it is a matter of hard work and experience; if the experience you need isn't thrown in your way, you must move heaven and earth to get it.

"The one guiding principle which, I feel, should be applied by all young men is this: if you love your calling, *stick!*

"Remember that the seven lean years came before the seven fat ones. Take the lean years with what patience you can while working to acquire that experience which must certainly tell in the end.

"Let me put it in another way: Study the career of any man of real achievement, and you will almost certainly find that this is true: from the very start he was not only willing but *eager* to profit by the experience of others. How true it is that there is nothing absolutely new under the sun! However great a man's achievement may be, it rests, in the final analysis, not upon radical departures from the experience of those who went before him, but upon the way in which he adapts their experience to his own purpose."

FOLLOW this narrative through, and you will see for yourself that it was not by chance that this man became the creator of the world's greatest bridge, but by an indomitable will to *get experience.* For twenty-five years he dreamed of such a project. In his youth, with a promising career ahead, he threw everything aside and associated himself with the bridge-building enterprises of another continent. *For he had to cross the ocean to find a river big enough to suit his dream of what a magnificent bridge might be!* And over here, he dreamed and worked, and charted his course always with that selfsame purpose in view—the experience that would fit him for the one thing above all else that he wanted to do.

To begin with, imagine him as a boy of eleven in that quaint, romantic old town of Schaffhausen, Switzerland. His grandfather was a painter of landscapes; his father a hat manufacturer. As for the boy himself, he had a remarkable talent for free-hand drawing and was on the way to become an architect. So he thought.

Now, over the Rhine, which flows through Schaffhausen, was, and is, the longest wooden bridge in the world. Four hundred feet between abutments and eighteen feet wide, it was built for the municipality by Ulrich Grubenman, an uneducated village carpenter. Just a plain wooden bridge, a combination of arch and truss work, without any expression of genuinely scientific principles, yet it represents the correct principles for spanning an opening. Roaming through the town with sketch pad and pencil, the youngster included it in his childish studies. It was the first bridge, with its charm and rugged strength, to fire his imagination!

Years pass. All through the lower classes of the Swiss elementary school, from twelve to seventeen, he is sketching, and dreaming of becoming an architect. A little later, when attending State College, it appears that he is extraordinarily good at mathematics. To his surprise, without effort, he becomes the leading pupil in the school in this branch. More and more he finds himself interested in the exact sciences; and when he enters the Swiss Federal Polytechnic Institute at Zurich, it is to pursue an engineering course; but without knowing what branch of engineering he will take up.

For two months, during the summer vacation of his second year at the institute, he works in a bridge-fabricating plant. It just happened that way. He had been prepared to take a job to get experience in any engineering branch. Here he learned something about the practical end of bridge building; he saw bridge members fabricated. He worked as an inspector of material and prepared some of the plans himself.

At this time, on a trip to Schaffhausen, he took another look at that wooden bridge built by Grubenman, the uneducated village carpenter. What a fine bridge it was to have been built by a mere artisan without scientific training! In the light of what he knew now, he admired it more than before.

On the faculty of the Institute at Zurich was Professor K. E. Hilgard, who had returned to Switzerland after a successful career in the United States as bridge engineer for the Northern Pacific Railroad. Professor Hilgard sometimes talked to his students about American bridge-building practices.

"Over there," he said, "things are done more efficiently than we do them in Europe. They are a young country. They have difficult problems to face. Industrially, they are getting better organized than we are; they are using more machinery; over there the engineer has greater freedom in applying individual ideas. In the United States I have seen youngsters in charge of work which, in Europe, only graybeards would be allowed to perform."

Around that classroom went a smile. Professor Hilgard was being adjudged guilty of "tall talking." Witty youngsters accused him of being "more American than the Americans." Whereupon, the professor showed pictures of Brooklyn Bridge, then the outstanding American example, and of various bridges over the Ohio and the Mississippi.

IN THE brain of at least one student in that classroom had lodged an idea, and presently he was all afire with it. He was going to America to get experience. He would associate himself with the greatest bridge-building enterprises he could find.

But he didn't go right away. He was then a little past twenty. Presently, a graduate engineer, he was working as draftsman and inspector for a Swiss firm. Then he was called to Frankfort by a German firm to take charge of their bridge designs and construction.

Meanwhile, acquiring the experience that would fit him for the great adventure on this side of the water, he was forever thinking of the great bridges that were building in the United States. This was in 1903. From the New World came word that the railroads were expanding in the West; there was talk of building additional large bridges over the East River in New York; and even some talk of bridging the Hudson.

"When I first heard of the problem involved in bridging the Hudson," said Mr. Ammann, "I was fascinated by it. The thing that attracted me was the magnitude of the span, for the length of the span is the real gauge of the difficulty of the task as a whole."

Are you going along on your nerves?

You are if your feet hurt—

SO many men and women fancy themselves of a "nervous disposition" when they are not. It is the cause of much unhappiness in the home. Life gets to be a humdrum existence. The sufferer goes to bed at night all dragged out, and awakes in the morning only half rested.

In most cases it is the *feet* that are at fault—one of the two major centers of nerve fatigue, doctors say. They drain one of vitality almost as fast as it is generated. Proper care of the feet prevents this prodigal waste and all the woes incident to it. Your former freshness and vivacity and buoyancy and vitality come back again. It is amazing the difference it makes in you in every way.

To regain foot health, use Dr. Scholl's Foot Balm. It revitalizes the feet, strengthens, stimulates and comforts them. It casts off impurities of the skin...keeps the muscles and tissues healthily energetic.

This creamy unguent is instantly effective in removing all aches and pains, soreness and tenderness, burning sensation and swelling. It allays the pain of corns, callouses and bunions...dispels foot odor. Its soothing, cooling, healing effects are delightful.

It will enable you to indulge in healthful sports and youthifying recreations with zest and abandon. Exertions which would ordinarily fatigue you and make you ache all over, will no longer bother you.

Buy a jar of Dr. Scholl's Foot Balm today. At all drug, shoe and dept. stores—35c.

Generous sample mailed free on receipt of coupon below.

Dr Scholl's Foot Balm

Made in the Laboratories of THE SCHOLL MFG. CO., World's Largest Manufacturers of Arch Supports, Foot Comfort Appliances and Foot Remedies.

Easy to apply, quickly absorbed by the pores. An indispensable toilet accessory for every foot-suffering man and woman.

"At that time, a bridge over the Hudson was merely a dream. The chances that it ever would be built were very slim. But it drew me on. In my mind's eye I kept contrasting that project with the greatest span that has ever been built across the Rhine—seven hundred and fifty feet! And I made up my mind that it was time to go. I talked it over with Professor Hilgard, who said, 'Go! By all means, go! Even if you don't stay more than a couple of years! Experience is what you want! And when you are there keep your ears and eyes open and mouth shut.' And he gave me letters of introduction.

"When I informed my employers, they said: 'You're making a mistake! Don't go! You're doing well here!' They offered me a much larger salary to stay, but I felt that I ought to go; and I went, landing in New York in the spring of 1904.

"For a young engineer with my thorough preparation and the ability to speak several languages, there was no difficulty in getting a job in America at that time. I found a place as assistant in the office of Joseph Mayer, who had lately been chief engineer of the Union Bridge Company, and was then practicing as a consulting engineer.

"Through this association with Mr. Mayer I immediately became familiar in detail with the problem of bridging the Hudson. He had already designed a railroad bridge for the Hudson River at Fifty-seventh Street, but the project had fallen through because the railroads were not prepared to coöperate financially.

"After six months with Mr. Mayer, during which time I designed twenty-five or thirty railroad bridges, I felt that I needed shop practice. So I sought and found a place with the Pennsylvania Steel Company at Steelton, Pennsylvania. Here, for two years, I was in the drafting department, working out detail drawings for all kinds of bridges. This position I was holding on August 29th, 1907, when the great bridge that was being built over the St. Lawrence River at Quebec collapsed—a cantilever bridge, with a span of eighteen hundred feet, half completed at the time it fell, causing the death of a hundred or more workmen."

AMAZEMENT over this catastrophe filled the engineering world. What could have caused it? A celebrated Philadelphia engineer, C. C. Schneider, formerly vice president of the American Bridge Company, was retained by the Canadian Government to investigate. For a young engineer like Ammann, earnestly seeking all the experience he could get, what was there to do? Through his employer, F. C. Kunz, chief engineer of the Pennsylvania Steel Company, he offered his services to Mr. Schneider to assist in the investigation, with or without pay, on any terms he could get; and presently be found himself in charge of the Quebec bridge investigation under Mr. Schneider.

"The failure of that first Quebec undertaking," said Mr. Ammann, "was due principally to the fact that the latticing of compression members was from three to four times lighter than it should have been. This had come about owing partly to the state of engineering knowledge at that time, and also partly to certain shop practices which have since been greatly improved. To-day, a failure such as that was

Digitized by Google
Original from UNIVERSITY OF IOWA

simply could not occur, I am sure."

Following the Quebec investigation Mr. Ammann was for two years first assistant in a famous firm of engineers—C. C. Schneider and F. C. Kunz. Then again he sought a change of work for the sake of varied experience, and he was recommended by his associates to Gustav Lindenthal. After eight years of study and preparation, Mr. Lindenthal had just received an order for the construction of the Famous Hell Gate bridge over East River. As first assistant to Mr. Lindenthal, Mr. Ammann was in charge of all office and field operations for that twenty-million-dollar project.

And now again, in 1920, the proposal of Mr. Lindenthal for a railroad bridge over the Hudson River at Fifty-seventh Street was revived. Again it fell through, owing to the financial inability of the railroads to coöperate.

"At that time," said Mr. Ammann, "it occurred to me that it should be possible to build a lighter and cheaper structure for vehicles and trolley cars at some other point, where it would not be in competition at all with the Fifty-seventh Street project. Forthwith, I investigated all possible sites, choosing the one already mentioned as the most feasible, and tentatively designed the type of structure I thought desirable.

"THERE was opposition, to be sure. Some declared that the proposal was too bold, questioning it simply because of its size. Governor Silzer of New Jersey, long familiar with the great demand for better vehicle transportation over the Hudson, and many civic bodies, became interested. Later, the legislatures of both New York and New Jersey took action. In 1925, the Port Authority, with ex-Governor Silzer at its head, was granted authority to build the bridge and operate it."

As the originator of the great project, Mr. Ammann was called upon to complete his designs and direct their execution. So much for the faith of that youth from Switzerland who believed that experience is the bedrock on which ultimate achievements must be grounded!

Now, in the construction of a great suspension bridge, the cables which support the bridge floor are one of the principal and most expensive parts of the whole structure. You will be surprised when I tell you that the cables for the Hudson River bridge, together with the anchorages which hold them in place, will cost twelve million five hundred thousand dollars, or about one fifth of the cost of the whole. But remember that these cables are of unprecedented size, thirty-six inches in diameter, five thousand feet in length, and seven thousand tons in weight! Getting these cables into place is not only the most complicated and important but the most picturesque feature of the work. So I asked Mr. Ammann to tell me exactly how this will be done.

"To begin with," he went on, "imagine these two great towers on either side of the river, thirty-five hundred feet apart, each six hundred and fifty feet high. Among the seven wonders of the ancient world there were two structures which dazzled the ancients because of their great height. First, there was the Pharos, or lighthouse, off Alexandria, in Egypt, whose fire is said to have been visible for a hundred miles;

LIQUID GRANITE

FLOOR VARNISH

Any varnish will wear—*under a rug*
But only varnish made as *Liquid Granite* is made can withstand millions of steps and wear for years

Coddle it under a rug, tread lightly with feet clad in carpet slippers—and almost any varnish will wear like a thoroughbred. But, when a finish must resist the strenuous play of little folk—withstand the stress of gay "Charlestoning" feet, or bear up under day-in-and-day-out hard wear — consider nothing but Berry Brothers' Liquid Granite Floor Varnish.

Liquid Granite outclasses other varnishes in beauty and durability, because it is made that way. Copal gum is the base of Liquid Granite. This substance, the fossilized sap of trees which crashed to earth in the tropics centuries ago, is sparingly used by most manufacturers because of its rarity and high cost.

"Save the surface and you save all"

Liquid Granite is produced by the manufacturer of Berry's Brushing Lacquer, Lionoil Floor Enamel, Luxeberry Enamel, Luxeberry Wood Finish, Berryloid, and other wear-resisting finishes.

Principal Foreign Agencies: London, S. E. 15, Hatcham Road at Old Kent Road; Paris, 54 Rue de Paris, Charenton; Berlin, W 9, Potsdamerstrasse 13; Turin, 10 Via Arcivescovado.

New gum of living trees is not used in Liquid Granite. Only the fossilized gum is considered satisfactory.

The markets are searched as well for the best grades of turpentine and other materials. Liquid Granite is entirely uniform as the formula and ingredients have never been changed, nor will they ever be changed except for better ones.

Like the velvet glove over the iron hand, Liquid Granite is soft and beautiful in appearance, yet will not craze, chip, crack or turn white. It is good for a million steps and more.

TEST THIS VARNISH YOURSELF

Berry Brothers, Inc., 211 Leib St., Detroit, Mich.

Please send me your test panel finished with Liquid Granite Floor Varnish, both gloss and dull.

second, there was the Colossus of Rhodes, a vast statue, the name of which has added a symbolic word to the vocabulary of all nations. It is said to have been so large that ships could pass between its legs, and it took a big man to encircle the thumb of the statue with his arms.

"As for the Pharos, it appears to have been not more than four hundred and fifty feet in height, while the Colossus was not more than a hundred and fifty. In contrast, the towers for the Hudson River bridge will be one third higher than the Pharos and four times as high as the Colossus.

"In the modern world we have one edifice that is almost exactly the same height as these bridge towers—the Singer Building in New York. The only edifices that exceed these towers in heights are the Eiffel Tower in Paris, the Woolworth, the Metropolitan, and one or two other New York skyscrapers. But remember that a spire supports nothing except itself, whereas a bridge tower is comparable to a great giant, a sort of Atlas, who carries on his shoulders a massive yoke with enormous weights attached, and such a tower must be built of unusual strength to fulfill this function.

"Built of structural steel and concrete, faced with granite, each of these towers will be strong enough to support a load of more than a hundred thousand tons in addition to its own weight. And each will contain twenty thousand tons of steel, enough to build two ordinary skyscrapers.

"At the top of each tower will be placed four steel castings of enormous size, twenty-nine feet in length and ten feet wide. These are known as 'saddles.' Each saddle has a groove three feet in diameter, and in each groove will rest one of the four great cables of the bridge.

"Once the towers have been completed and the saddles put in place, the next step is the building of the footwalk. Steel cables strong enough to support this temporary structure will be stretched across the river by means of tow boats, and raised to the top of the towers by means of derricks. The cables will then be adjusted so that a solid plank platform can be built on them. The building of this footwalk alone will require many months. When completed, it furnishes a safe passage for workmen clear across the river, from tower to tower.

"After the construction of the footwalk, the 'guide wires' are put in place. These are small, strong wires that serve as a guide for the adjustment of the cables; that is, the sag of the cables when they are completed will correspond to the sag of the so-called guide wires.

"NOW we are ready to begin the spinning of the cables. A moment ago you asked me how it would be possible to raise cables thirty-six inches in diameter and weighing seven thousand tons each into the saddles at the top of the towers. The fact is, of course, that each cable is made up of 26,474 small wires, each three sixteenths of an inch in diameter, about the size of an ordinary lead pencil.

"The wire for these cables is now being made in a great bridge-wire plant in New Jersey. Producing on an average of eight hundred tons a month, it will be three years before this plant will complete its contract for wire for this bridge.

"At the plant, the cable wire is made in lengths of thirty-eight hundred feet. In a so-called reeling plant, to be erected for the purpose near the site of the bridge, all this wire will be spliced into eighty-thousand-foot lengths and put on giant reels eight feet in diameter. There will be many thousands of these reels. Half of them will be shipped to either side of the river at the bridge site.

"Before I finish explaining how the cables are spun out of these small wires, let me say a word about anchorages at each end of the bridge. The individual wires which make up the cables will be fastened to the anchorages by means of what we call a 'strand shoe,' which is something like a pulley wheel, but stationary. The anchorage on the New York side will be a solid block of masonry and steel covering an acre of land. On the New Jersey side the steel girders of the anchorage will be embedded in tunnels blasted out of solid rock forming the Palisades.

"WHEN it comes actually to spinning the cable, one of the great reels of wire I have mentioned is first mounted on an axle in such a way that it can turn easily. One end of the wire will be fastened to the anchorage on the New York side. Between the fast end of the wire and the reel, a revolving wheel will be adjusted. This wheel now travels on a cable back and forth across the footbridge.

"Each time the traveling wheel goes across the footbridge it spins two wires. When it gets to the opposite side from which it started, the wire is fastened to the anchorage over there. Then, on its return journey, the traveling wheel picks up a new wire from another reel and travels back, spinning two wires more. This operation is repeated until the wire on the reel is exhausted, after which the end of the last spun wire is spliced into a new reel, and the operation continues.

"So it goes. It takes four hundred and thirty-four of these small, pencil-like wires to make one strand. It takes sixty-one strands to make a cable. Thus you see that each cable contains twenty-six thousand four hundred and seventy-four individual wires.

"Once a strand has been completed, it is clamped together at intervals of three feet with flat steel bands, and then lifted by derricks into the proper saddle. When sixty-one strands have been completed, the cable is roughly hexagonal in shape, loose and soft. Now comes what is known as the squeezing operation. At intervals of three feet, hydraulic presses are applied to the cable. Consisting of six jacks, each jack exerting a pressure of thirty tons, the press squeezes the loose strands into what is practically a solid mass. Wires and strands are compressed until further compression is impossible.

"Now we have our thirty-six-inch cable adjusted to its saddle, with the proper sag, and complete, except for numerous things that must be done to protect it against the weather. First, it must be cleaned with gasolene throughout its whole length, to remove grease and dirt. Then it will be given two coats of red lead paint, following which it will be wrapped in numerous coverings of steel wire. This, in turn, will be caulked with lead wool and given many coats of paint.

"How will the floor of the bridges be hung from these cables? By means of steel suspenders attached to the cables at a distance of sixty feet apart. The suspenders will support steel cross girders, on which a floor of steel and concrete will be laid. Three and a quarter inches in diameter, these suspenders are designed to withstand a load of two hundred tons each, and they would not break under a strain four times as great.

"There is one feature of a structure such as this in which I think every layman will be particularly interested—the effect of wind pressure on the upper surfaces of the bridge. In the case of small bridges, the effect of wind gusts is to produce a wabbling motion. Owing to the great dead weight of the structure in question, the wind will have relatively less effect. Every engineer could, of course, anticipate what I am going to say, but the average person will doubtless be surprised when I tell him the extent to which various parts of the structure will be affected by wind, heat, and cold.

"We calculate that the force of the wind against the upper portion of the structure will, at times, tilt the floor of the bridge sideways for a maximum of ten feet. To persons traveling the bridge, even this will be barely noticeable, owing to the great width of the structure. As for the cables, they will be subject to considerable temperature variations, particularly at the center. Contracting under the influence of cold, they will go up at the center a maximum of five feet. Under the influence of heat, the cables will expand and go down at the center a maximum of five feet.

"Similarly, the tower will move under the influence of temperature and what engineers call 'live load motion.' Under extreme conditions the towers may move out at the top a maximum of one foot toward the river. Likewise, the cables may sag a matter of from four to five feet when the full load is on the bridge.

"Surprising as these figures may seem to the layman, the conditions, stresses, and strains they represent are all allowed for in the calculations on which the design of the bridge is based; and the variations mentioned are not at all extreme for a structure of such mammoth size.

"IT HAS been said that the Hudson River bridge presents many new and unusual features. In a sense that may be true; but the important thing is that practically all these features involve only skillful adaptation of what has been learned by past experience in the art of bridge building. However, you will, I think, be interested to know that in one respect the bridge represents a new departure:

"Ever since the early stages of the nineteenth century, engineers have had a tendency to make suspension bridges more and more rigid, in order to eliminate the wavelike motion due to flexibility. This rigidity is accomplished by what is known as 'stiffening;' that is, by the use of great trusses and other devices. For a long span, these trusses require a great deal of metal, and so mean much expense.

"I became convinced that a bridge with such an enormous span did not require this excessive amount of metal to make it rigid. The structure itself will weigh five times the weight of the greatest load it will ever be called upon to carry. Thus, I concluded that this bridge could be built with

Laundry-washed clothes are cleaner

FEW THINGS in the management of a home are more important than the absolute cleanliness of the table linens, the sheets, the towels, the clothing, and especially the underthings your children wear ❦ Laundry-washed clothes are cleaner . . . . in fact, the U. S. Government is authority for the statement that by following modern laundry methods one is sure clothing is actually clean ❦ There is nothing mysterious about the success of the modern laundry in washing clothes *cleaner* ❦ Gentle baths in warm suds of pure soap and filtered rainsoft water of scientifically determined temperature, followed by many rinses, remove every particle of dirt ❦ *Visit a modern laundry* ❦ Then you will see for yourself why millions of home managers depend on the sterilizing process of the modern laundry for gratifying relief from irksome washday toil.

The LAUNDRY *does it best*

ABOVE—*The protecting hand of science establishes every laundry washing formula with prescription-like exactness.* LEFT—*Preparing the purifying, sterilizing bath as prescribed by Science.*

Keeping Faith with American Women

THE modern laundries which stand as sponsors for this series of informative advertisements belong to a great group of progressive institutions. Not only is this group endeavoring to tell you the illuminating facts about modern laundry service, but each modern laundry is earnestly striving to keep its methods on a level with the high standards and ideals reflected in these advertisements.

Modern laundries offer a variety of services to suit every family need. All-ironed work, partially-ironed work, and work which returns clothes damp for ironing, are but a few of the many individualized services available at laundries today. Phone a modern laundry now—let them help you decide which service is best suited to your needs.

MARK TWAIN

wanted to be your friend

Let Mark Twain be your companion as he wanted to be. The coupon below, without expense or obligation, will bring his entertaining, lovable personality to brighten your leisure hours.

EVERYBODY has read *some* of Mark Twain. The whole world has chuckled with him over the antics of Tom Sawyer, and Huck Finn, and Pudd'nhead Wilson. But do you realize that these are only a tiny *sample* of the delightful world he opens up to you? How much of Mark Twain do you really know—have you read all the witty short stories, the brilliant fighting essays, the side-splitting comments on men and events, the great novels, the attacks on fraud?

Why not let Mark Twain be your friend as he wished to be? To his publishers he said, "Let's make an inexpensive edition of my books so that everybody can have them." This wish is now fulfilled by the publication of the splendid Author's National Edition, in 25 volumes.

Author's National Edition MARK TWAIN

Among the multitude of shoddily bound and carelessly edited sets of books now flooding the market, this superb edition of Mark Twain comes as a blessed relief. The gift book tells all about it. Simply mail the coupon. There's not the slightest obligation. Don't deny yourself the friendship of Mark Twain any longer.

When you clip and mail the coupon at the bottom of this page, two things will happen:

Mark Twain planned these books for you

1. You will receive, *free*, a desirable booklet called "Your Friend, Mark Twain." This booklet describes Mark Twain's matchless writings, and contains a little collection of his wittiest sayings. It is a gift to you.

2. At the same time there will come into your life something much bigger and more valuable than this—something you cannot see but will cherish for the rest of your days—*the priceless friendship of Mark Twain.*

comparatively light, flexible, shallow stiffening trusses instead of heavy, rigid trusses. In the aggregate, this means a great saving—a saving of fourteen thousand seven hundred pounds of steel per lineal foot of bridge, or thirty-five thousand tons in all. To this must be added an equivalent saving, owing to the fact that much extra material would have to be put into the structure to carry the excess weight of the stiffening system. In a word, this one feature of the design means a saving of twelve million dollars in material and construction costs."

"A few years ago," I remarked, "when the Delaware bridge between Philadelphia and Camden was completed, it was discussed as a remarkable advance, because of a span eighteen hundred feet in length. As you have already indicated, the Hudson River bridge will have a span twice as great. That makes me wonder what would be the greatest span possible to build."

"About two miles, or a little less—ten thousand feet—under present conditions," was the prompt response.

"If two miles, why not five?" I asked.

"The possible length of a span is absolutely determined by the strength of available materials. As you doubtless know, each particular metal has a certain strength. As the span increases in length, an increasing proportion of metal has to be supplied to carry its own weight. Consequently, a limit will be reached when, no matter how much material is put into the structure, it can carry its own weight and *no additional load.*

"Accordingly, I calculate that, with the materials we have at present, the utmost length for a span of the suspension type is ten thousand feet. The limit for a span of any other type is much less.

"The longest spans actually under consideration at the present time are not over five thousand feet. One of approximately this length is being talked of as a means of connecting San Francisco with a suburb across the Golden Gate; another of the same length may some day be built over the Narrows, the neck between the lower and upper bays of New York Harbor."

There'll Be 9,000 Earthquakes This Year!

(*Continued from page 63*)

travel farther from their source. But with delicate instruments they may be felt at the very opposite point of the earth.

"We have recorded several quakes from Japan this year, several from the mainland of Asia. The recent quake that disturbed the Azores, the Armenian earthquakes of 1927, the shock that shook the Holy Land on July 11th, 1927, all these were distinctly recorded by our seismographs, though the vibrations reaching here from so great a distance had been dampened down to a very small amplitude."

"But how large are the vibrations right at the scene of the earthquake?" I asked.

"The movement may be only a fraction of an inch, and still be very destructive. Or it may be several inches. The earth

The start of many serious ills . . .

INTESTINAL TOXICITY

MANY of us are constantly risking the priceless gift of health because of faulty intestinal hygiene. Not that we neglect the matter! Indeed, no. As soon as we feel the headache, the tired digestion, the fatigue that so often warn us of intestinal toxicity, we take a cathartic—and consider the matter settled.

It is not. A drastic cathartic may bring temporary relief. But it also frequently shocks the system, and too often tends to cause undesirable habits. And meanwhile intestinal toxicity continues its work—spreading poisons to all parts of the system, stealing away strength and vitality, often laying the foundation for serious ills to follow.

That is why an ever-increasing number of people are turning to natural means in their efforts to combat intestinal toxicity. A balanced diet (with green vegetables and roughage reducing the amount of proteins)—exercise *in fresh air*—plenty of water—work wonders.

As an added precaution, Eno, taken regularly, often gives just the extra assistance needed to keep one fit.

For Eno is so unlike the ordinary bitter "salts"—so pleasing in taste—so gentle, yet thorough, in action that it never leaves you "all dragged out"! It simply flushes and cleanses the intestinal tract and speeds up normal action. It does not gripe nor disturb the day's routine.

Try Eno for a week—regularly morning or evening. You'll give it a regular place on your bathroom shelf when you have once experienced the keen, clear-eyed health that is possible to those free from the absorption of intestinal toxins.

This famous effervescent saline is available at all druggists at 75c and $1.25 a bottle. Prepared only by J. C. Eno, Ltd., London, England. Sales Agents: Harold F. Ritchie & Co., Inc., Belmont Building, Madison Avenue at 34th Street, New York.

Eno—health precaution—will cost you less than 3c a day

When you get up, simply take a glass of water and add a generous teaspoonful of Eno. *Taking this sparkling, delightful saline regularly will help to keep you fit and eager through the hardest day.*

For a business headache, nothing is better than a glass of Eno. *You can get it at the better soda fountains everywhere.*

particles move both vertically and horizontally, and in many diverse ways between these directions. A movement of only an inch is a terrific experience for the human nervous system, for the earth surface does not make one movement and stop. It vibrates many times within a second. When you know that these vibrations travel around the earth at the rate of hundreds of miles per minute, you can imagine that at the point of origin their energy is enormous.

"During a quake in Calabria a stone well was shot up about eight feet out of the ground. It was like a pebble thrown into the air by the vibrating head of a drum. In Messina, pavements were furrowed, waterpipes telescoped, chimneys twisted, and hundreds of loose stone houses shaken to ruins. 'The ground was shaken like a rat in the teeth of a terrier,' is the way a man in the great Indian quake described it.

"The movement along the surface horizontally may be considerable. In California, in 1906, the earth slipped along a vast crustal seam or fault, and roads were sliced in two and shifted as much as fifteen feet to one side. Even greater vertical movements are on record. A violent earthquake in Alaska in 1899 lifted a considerable stretch of shore, and left it permanently upraised more than forty-seven feet.

"Frequently the earth billows like waves in the sea. The earthquake in Charleston, South Carolina, in 1886, had a very pronounced surface-wave movement. One observer described it as billowing along 'like ground swells in deep water,' and the waves of earth were two feet high from trough to crest.

"The Charleston quake was one of the most severe ever recorded on this continent. The New York 'Herald' reported that it was felt on the third floor of its building in New York with alarming distinctness, and its tremblors were noticeable as far west as Chicago. This earthquake proved of great interest to seismologists who were then studying the velocity of seismic vibrations, because it occurred in a nation that had standard time—then a rarity on the earth! For this reason, the time of the reports from various cities could be reduced with some precision."

WE HAD reached the laboratory, a frame building of one large room labeled "Seismology." Windows were open on three sides. "Take off your coat and collar, and be comfortable," said Father Tondorf, indicating a chair, and making it easy to follow his advice by practicing it himself. Picking up a fly-swatter he swooped it down upon a venturesome fly that had alighted on a nearby globe.

"If we could bring the earth down to the size of this globe," he said, "we might solve some of the mysteries of earthquakes more quickly, especially if we bored a hole into the globe and looked into its interior."

"Do you know what I am thinking, Father Tondorf?" I said. "I am wondering how you got interested in this subject."

"Oh, I am interested in many things," he answered. "As for this particular work, I was assigned to it by the Superior in our Order. Some years ago the International Seismological Association felt that the study of earthquakes required more observers, and particularly so in America, where there was very little scientific observation in this field. As the Society of Jesus has numerous colleges distributed over North America, the Association appealed to the Jesuits and asked if we would not interest ourselves actively in seismology. It was in response to this appeal that our station was established here at Georgetown in 1911; and similar stations have been placed at more than a dozen other Jesuit colleges."

"But the Jesuits are a religious order. Why are they concerned with science?"

"We are interested in all branches of knowledge," said the priest. "Missions, education, research, exploration, the classics, science, invention—many trails have been traveled by members of our Society. When a man offers himself to the Society, if he has a bent in any direction he is encouraged to pursue it and improve it, and to master it as far as he may."

"What was your early bent?" I asked.

"Possibly I had none in particular, but in my childhood, like the average youngster, I found delight in the starry heavens. They spoke to me the glory of their Maker; they stirred my religious nature profoundly—and that was the beginning. Then I entered Boston College, where my teachers, the Jesuit fathers, led me closer into the secrets of the skies. I left Boston College in 1888, at the age of eighteen years, and entered the Jesuit novitiate at Frederick, Maryland."

THIS was the beginning of a training that was to continue for nineteen years.

"The first two years are known as the 'noviceship'," explained the priest. "These years are devoted mainly to spiritual exercises and are to test the novice's calling. If this preliminary period is passed successfully, simple vows are assumed. These vows are called 'simple' because they are revokable if the probationer decides not to remain in the Order, or if it is found advisable to ask him to withdraw."

Following this period of probation, Father Tondorf became a "scholastic," or learner, and that is literally what he was for the next seventeen years.

Father Tondorf has been at Georgetown since 1904, as computer, mathematician, teacher of various sciences, and finally as director of the seismological station. The last step in his progression as a Jesuit came in 1907. He took solemn vows and became one of "the professed," swearing himself to perpetual poverty, chastity, and obedience.

"But your work takes you out into the world," I said. "Are there not times when you must use money?"

"The work is supported by the university, and whenever travel is necessary, transportation and other essential expenses are provided," he explained.

The seismological station of Georgetown University is said to be the most complete of any station on this continent. I have visited it twice since that first call, and through the courtesy of Father Tondorf was privileged to watch operations. There are two "caves," as the underground vaults are called, in which five earthquake detectors, or "seismographs," are installed. One seismograph is for the detection of vertical movements of the earth, and Father Tondorf told me that it is the most sensitive machine now in the United States. The other four detect horizontal movements, and are so placed as to cover all directions of the compass.

The caves have double walls, electric heating to keep the temperature constantly at 78 degrees, and when the doors close the caves are hermetically sealed. Every precaution is taken to guard the instruments from outside disturbance.

It was a weird experience to stand beside one of these silent machines and watch its point trace a zigzag line on a revolving scroll of smoked paper—writing in Washington the story of a quake that had just shaken the Alaska coast.

"How does it do it?"

"THE earth does the trick," answered Father Tondorf. "The seismograph is simply a writing machine with which Mother Earth jots down the record of her own restlessness. However, it is a peculiar writing machine, for the usual order is reversed—the pen is stationary and the paper does the moving. If you can imagine a dexterous chirographer who can write a message by moving a piece of paper back and forth under a fixed pen, you have the system by which the earth writes down its own tremors."

"But the earth is your foundation, and when the earth is quaking, how can you have a fixed pen?" I asked.

"Here's how we manage," and Father Tondorf pointed out the various parts of the machine.

"We have this weight of five hundred pounds suspended so as to be in neutral equilibrium. It is really a big pendulum at rest. When the earth moves, this inert weight tends to remain stationary. The pen or point is attached to this stationary mass, and so it tends to remain stationary too. But the paper is on a drum supported by the concrete floor, so any movement of the earth is communicated directly to the paper and causes it to joggle. Since the point remains stationary and its sharp platinum tip just grazes the paper, it cuts a line in the smoked surface."

Anyone who has been in a railroad coach when the locomotive gave a sudden jerk, knows that a body at rest tends to remain where it is. The seismologist simply harnesses this well-known principle, which Sir Isaac Newton called the law of inertia.

"Unfortunately," added Father Tondorf, "this tendency for the pendulum to remain at rest is not absolute. When the period of the pendulum approximates the period of the earth movement, the pendulum is inclined to pick up the movement of the earth and itself vibrate, thus falsifying the seismogram.

"Attempts were early made to dampen out these movements, and this has been more or less satisfactorily accomplished by a resistance applied through air-compression devices, water, and oil, and lately through magnetic interference. Recent improvements include seismographs which make their records photographically, by reflecting a beam of light upon sensitized paper, and in many of these the stationary mass has been reduced to a small weight."

The first earthquake detector of which we have record was devised by a Chinese smith, Choko, about eighteen hundred years ago, and is fully described and illustrated in one of the old Chinese annals. Choko's instrument had eight metal balls poised loosely, each resting in the open

Teamwork Pays!

Of course a man's wife is part of the team, and her wifely attentions to his personal appearance can have much to do with business success.

There's a decided connection between the full wash line and the full pay envelope. Frequent change of linen is an investment that earns dividends.

Men realize this, but yet in some homes there persists that restraint which says, "Try to keep the wash down this week."

What a mistake! Simply an instance of lack of teamwork which may lose the game.

THERE'S HEALTH AND WEALTH IN SOAP & WATER

mouth of a brass dragon. When the earth quaked the dragons trembled and the balls were joggled off and dropped.

Of course this crude arrangement of balls in dragons' mouths could do no more than indicate that the earth was agitated; it gave no measure of the distance or extent of the quake. "But nothing better was invented for the next sixteen hundred years," said Father Tondorf, "and the really sensitive seismographs, with which it is possible to determine the position of distant quakes, are the product of the past half-century."

I asked the seismologist to explain how he can determine the position of an earthquake.

"If the seismogram, or record, is readable—and often it is not," answered Father Tondorf, "a child in high school would be equal to the solution.

"The secret is contained in this fact: that earthquake vibrations travel in two kinds of waves, one at the rate of 497 miles an hour, the other at 279½ miles an hour. Naturally, the fast waves reach the seismograph first, write their signature; after a while, the slow waves arrive and write theirs. Other kinds of waves also enter into the seismogram; but these fast and slow waves are very pronounced and generally are easily identified. Since we know their speeds, and can tell from the space on the seismogram the period elapsed between the arrival of the first fast wave and the arrival of the first slow wave, it is an easy problem in mathematics to figure the distance that the two waves have traveled.

"It is like having two trains leave Boston for New York on parallel tracks at the same moment, one traveling fifty miles an hour, the other thirty miles. If you know the times of arrival in New York you can compute, from the two velocities, the distance they have traveled.

"ON THE morning after the great Japanese earthquake in 1923, I went to my cave at four o'clock in the morning and found there a very marked record. I took the paper off the drum and studied it as closely as the vulnerable film of the smoked surface would permit. I estimated at once that the distance was about 6,500 miles. Fifteen minutes later, after the sheet had been given a protective coating of shellac, I was able to read more closely between the lines.

"I found that the distance of the center of the disturbance was less than I had estimated—it figured 6,100 miles. Then I drew a circle on my globe, with the center in Washington and the radius of 6,100 miles, and when the circle passed through Japan I was fairly certain that Japan was the disturbed area.

"Theoretically the quake might be anywhere along the circumference of that 6,100-mile circle, but there are chronic zones of quakes, and generally we are able to determine positions through knowledge of these zones. By securing records from two or more stations widely separated, and combining the results, the precise center of an earthquake can be located to a nicety.

"To judge the violence of an earthquake we are forced to rely on the extent of the zigzags traced on the paper, allowance being made for the distance traveled by the earth vibrations. That is to say, if our seismograph is considerably joggled, so that the point cuts wide zigzags, and at the same time the record shows that the vibrations have traveled 5,000 or 6,000 miles, we know that the quake was a severe one. Slight quakes 5,000 miles off would make a very light record, perhaps none at all. Whereas, light quakes close at hand may make a heavy record.

"That earthquake of 1925 which gave New York a slight shake oscillated our seismograph considerably—so much so that the paper jumped far to one side, and entirely left the point at one place. That happened because the center of the quake, in Quebec, was relatively near. The same disturbance in Asia would have caused only minor tremors on our instruments."

Geologists, by studying rock formations, go far back into the past of our planet and find evidences of gigantic earthquakes everywhere—for earthquakes seem to be a necessary incident to the uplifting of the crust. Indeed, it is fair to say that without earthquakes eventually we would have no dry land. Mountains and hills are continuously being leveled by the processes of the weather and washed by rains and rivers as sediment into the sea. Were it not for the uplifting of the crust, which is accompanied by the cracking and slipping of rock strata in a quake, we would soon be left with a globe entirely covered with ocean.

"EARTHQUAKES must not be thought of as entirely useless pests," said Father Tondorf. "They appear to be quite necessary to the well-being of us land creatures. This suggests why certain regions are more afflicted with quakes than other regions. Geologists tell us that the Coast Range in California are young mountains and are still growing. Also that the lofty St. Elias Range in Alaska is yet in the making. Over in Asia they find that the massive Himalayas, which include Mount Everest and other exceptionally high peaks, are pushing in their restless youth toward the Pacific Ocean. Similarly, the mountains of Japan, the Philippines, Sumatra, and the coast of Chile, in South America, are all in process of upbuilding.

"It is this very district, the rim of the Pacific Ocean, that is the most earthquaky region of our planet. And it is only natural that this should be, for these are the regions where crustal uplift is going on most rapidly. It has been predicted by specialists who have studied the evidence that within a few thousand years, the whole eastern coast of Japan will have been uplifted into mountains shearing off steeply into the sea. There is a mountain range near the border of the United States and Alberta, Canada, which shows a shift of seven miles to the east—it has moved with the crustal creep that distance.

"An earthquake is just a small by-product of these tremendous shiftings of weight on the earth's crust. An uplift in one area must be matched by a drop in another, and somewhere between these two opposing movements the crust must give. Whenever that giving takes place, the rock cracks, breaks, and slips—and the delicately poised seismographs write down another earthquake.

"The earth is hard and resilient. And when a layer of the crust snaps, or slips along a seam of weakness with the tremendous friction of millions of tons of rock, the whole round globe, sea and land, rings with the vibrations, like a bell that has been struck."

"WHAT are the chances of earthquakes in the United States?" I asked.

"We have certain well-defined faults, or seams of weakness," answered the seismologist. "There is one along the Pacific Coast, one in the Mississippi Valley, and one in the St. Lawrence Valley north of Quebec. The latter is not in the United States, but its effects may be felt in the United States, as they were on March 1st, 1925.

"The year 1925 was the most active year seismically that we have had in recent times. There were three fairly sizable earthquakes in North America that year, and one hundred and twenty-seven not so serious.

"I have heard and read some rather dire prophecies of what might happen to New York some day from an earthquake. I am not inclined to view such prophecies as serious; and this opinion is based on fundamental principles accepted by all geophysicists. Though New York is somewhat near to the fault in the St. Lawrence Valley, the evidence seems convincing that the eastern section of North America is not suffering any severe crustal strain. Of course there is the Charleston earthquake of forty-two years ago—it still awaits a satisfactory explanation. 'Perhaps' and 'possibly' fit neatly into the statements of the seismologist, nor has he any prerogative to be dogmatic.

"In proportion to its area, I think the United States gets a very small share of earthquakes, and can feel especially favored in this regard.

"A practical good that may come out of the studies of seismologists," added Father Tondorf, "is an exact knowledge of earth movements during a quake. This should supply data to guide engineers in planning cities and erecting buildings proof against earth shocks. An American firm has erected buildings in Japan which it claims are earthquake-proof. Only time can substantiate these claims. That they have stood a single quake, and even a severe one, would hardly be assurance that they will withstand every possible movement of the earth. For it is safe to say the earth never moves twice in the same way.

"But many practical points have been gained in this field of engineering in recent years, and, while we can never think of controlling earthquakes, we should be able to reduce their destructive effects."

Father Tondorf walked with me to the campus gate, and on the way we met two small boys, tiny tads of about seven years. They hurried up and accompanied us to the entrance, walking solemnly on each side of the priest. I have since learned that a host of children in Georgetown flock to him when they see him on the street. One who knows him well told me of waifs that Father Tondorf has taken under his wing and helped. There are several boys whom he put through school; some now useful members of the professions have this quiet, modest scholar to thank for their education. A seismologist does not necessarily think only of seismographs, seismograms, and seismic computations!

Look underneath, look inside ...and listen to it!

WHEN you buy an electric refrigerator, do a bit of investigating on your own. Look under the cabinet, look carefully inside it, and above all things, listen to it.

Look under the cabinet. With the General Electric Refrigerator you'll notice at once that all the models are up-on-legs. This makes it easy to clean under them. But, more important, it means that *all* the machinery is safely sealed away in the air-tight steel casing which you see on top of the cabinet.

Look inside. Is there really ample food space? You will find in the General Electric Refrigerator that the chilling chamber is amazingly compact. It actually takes little more room than the trays in which your ice is frozen.

Then listen. This you must do. We want you to judge for yourself just how quietly this refrigerator operates.

All these things are vitally important. But be sure to consider, too, the organization which makes it. The General Electric Refrigerator is the product of fifteen years of research in the laboratories of General Electric.

See the many models. Notice their absolute simplicity, their quietness. Make comparisons with other refrigerators. If you write us, we will be glad to send you Booklet A-6 which gives you complete descriptions and specifications.

The
WORLD'S BEST
RIVER TRIP

A MATCHLESS trip of world-wide fame which you can enjoy without added expense on your journey to or from New York. Whether you travel for business or pleasure you cannot fail to find it of fascinating interest.

DAILY INCLUDING SUNDAY BETWEEN NEW YORK AND ALBANY

May 19th to October 15th

Easy change from train to boat or boat to train at Albany, enabling you to fit the Day Line trip into any summer itinerary. Every convenience for luxurious and pleasurable travel. Orchestra on all through steamers. Delightful One-Day Outings New York to Indian Point, Bear Mountain, West Point, Newburgh, Poughkeepsie and return.

Be sure your ticket reads via Day Line. Or we will accept through rail tickets between New York and Albany and Albany and New York.

THE FAMILY'S PROBLEMS

And Then He Begged Us To Send Him to School!

OUR son never wanted to go to school. This was a tremendous disappointment to me; but I kept hoping that he would sometime draw an exceptional teacher, or that when he became able to read for himself his feeling would change. Neither of these things happened: He continued to dislike school intensely, and he was bringing home disgraceful report cards.

I talked with him and tried to make him see what an education means, but I could not change his attitude. He said he would go to school as long as the law compelled him, and no longer. This, if you please, from a ten-year-old.

Not a great while before I had read an article in THE AMERICAN MAGAZINE that had impressed me very much. I cannot recall the name of the person interviewed, but he was a man to whom people took their problems, invariably coming away with a solution. As I remember it, his idea was that if people wanted something that was not good for them, this thing should be given to them in large doses. So, with this in mind, I went to talk it over with the principal of my son's school.

I found that my boy had told him just what he had told me. We could not seem to hit upon any good plan, until I told him of an instance mentioned in the article I had read. It was about a little girl who had to be compelled to go to school every day. The parents were advised to keep her out of school for a year. She was not allowed to go to school for any purpose whatever. When the next school year started, she was howling to go. This did not seem the perfect solution to our problem, for my boy could do nothing the longest, and be the happiest over it, of anyone you ever saw. But it contained the germ of our final solution. We decided to keep the boy out of school, and make him work.

ACCORDINGLY I went home and talked it over with him. I said: "Son, you know what I have always told you. I do not care what you do, when you are a man. I do not care whether or not you are a ditch digger; but if that's what you want to be, I do want you to be a good ditch digger. An educated ditch digger has a better time than an ignorant one. And education opens up a bigger and more interesting world to you. As your understanding is increased, so is your capacity for enjoyment increased.

"However, as you are determined that you do not want an education Mr. J— and I have decided that perhaps it is a mistake to waste so many years. If you are going to be a laboring man, it will be better for you to start in now to develop your muscles, so that you may become a first-class laboring man.

"Now, you know that everyone who eats must work. The way boys and girls do their share is by working at school and, of course, doing their share of the chores at home. So, if you do not go to school, you must work during those hours. I cannot give you a man's work to do, but everything you do will be good training, for laboring men often have to take uncongenial jobs."

He was wildly enthusiastic. He enumerated the various things he could do for me, and I must say that during the try-out he was as game as could be. He did anything I asked him to do, and did it cheerfully, and well.

Before he started work the first morning, I told him I would let him reconsider. If, after a week or two of work, he decided he would rather go to school, he might return. But if he did decide to go back, he would have to play fair—go at least until he was through the eighth grade, and bring home creditable reports.

THE first day went by wonderfully, also the second day. Each morning I let him do the dishes alone. These dishes include a separator and milk dishes. At noon I let him have help with the washing. The third morning he remarked that, anyway, the dishes wouldn't be so bad after lunch, as M— would help him. So that day I had other work for M—, and from then on he had the dishes alone.

He asked if he could have a fifteen-minute recess, as that was what they had at school. After due deliberation, we decided that uneducated folks do not have as much recreation time as educated ones, and ruled against it. He saw the justice of it and never mentioned it again.

By Friday morning, I think he felt that the world was just nothing but dirty dishes, and that an education or the getting of one might lift a fellow out of such a sudsy sea. He informed me that he was going to school that afternoon. I told him that would not be fair, as a working man would have to put in six days; and I felt that he needed to put in at least a week at it.

He fairly howled at that, and told me that he was going back Monday morning and nobody could stop him, for the law said he had to go, and the sheriff would come after us if we kept him home.

It was such a sudden and complete surrender that I could hardly believe it.

The rest of the school year his reports were considerably better. This year he has had his name in the honor roll several times and has had "A" in deportment.

It was a wonderfully successful experiment, and was surely better than punishing or scolding. After all, it takes real experience to teach any of us, doesn't it?

Attractive Gift Box included with this Duofold Duette at $8, $8.50, and $11. Sold separately, if desired—Over-size Pen, $7; Junior or Lady size, $5. Parker Duofold Pencils to correspond, $4, $3.50, and $3.

Red and Black Color Combination Reg. Trade Mark U. S. Pat. Office

Parker Duofold Desk Sets
$8.75 *to* $100.00

For the Graduates' First Job

Give the Duofold Duette

A Fine Associate With Which to Face the World—A Good Reward for Past Performance

Pen Guaranteed Forever Against All Defects

To reward success in learning, for a flying start in earning—here are two Business Associates that help bring *rapid promotion!*

Pen with self-starting Pressure-less Point, Non-Breakable Permanite Barrel [28% lighter than rubber], Over-size Ink Capacity, and Classic Beauty and Balance.

Today, Parker Duofold embodies 47 major improvements — 32 patented. Thus a Duofold embodies the utmost in a fountain pen.

*And to prove Parker Duofold is a pen of lifelong perfection, we offer to make good any defect, provided complete pen is sent by the owner direct to the factory with 10c for return postage and insurance.

Parker Duofold Pencils match the pens in all five fashionable colors—all smartly black-tipped—Jade, Lacquer-red, Lapis Lazuli Blue, Imperial Mandarin Yellow, and Jet and Gold.

But don't be guided by color alone. Make sure this mark of highest excellence is on the barrels—"Geo. S. Parker—DUOFOLD." Then everybody will be happy.

Ready now at the nearest pen counter—step in and see them.

"Of course it's not an *Orthophonic*" we would say apologetically

AFTER hearing the Hamiltons' new Orthophonic Victrola, my husband and I felt like apologizing every time anybody asked us to play *our* poor little old machine. It was good enough in its day, to be sure, and gave us a great deal of pleasure. But we had had it since Roosevelt was President. I think the last record the children bought was *Dardanella!*

In the meantime, we have had three new cars. But, for some reason—sentimental, perhaps—we clung to our old talking-machine. It was a nice piece of woodwork and seemed to be a part of the household. However, we couldn't forget that evening we had spent with the Hamiltons.

Such music! Such versatility! Stokowski, Kreisler, Whiteman, Chaliapin, Jesse Crawford . . . every kind and class of music. I believe the Hamiltons thought we were *never* going home! But you couldn't blame us. We had never heard music like that, except on the stage, by living artists.

In the meantime, we have had three new cars

We knew that, sooner or later, we would just have to have an Orthophonic Victrola. The more we were asked to play the old machine, the more determined we were to replace it with a new one. Well, we have one of these wonderful instruments now. Already, it has repaid us in a thousand ways. Our only regret now is that we waited so long before buying it!

Model Eight-thirty-five. Orthophonic Victrola. List price, $300. With electric motor, $35 extra.

Ask your dealer to demonstrate an Orthophonic Victrola *in your home*, where you may judge its harmonious appearance as well as its musical performance. There are many beautiful models, from $75 to $1550, list price.

See and hear the *Automatic* Victrola, which changes its own records. Most dealers extend the courtesy of a small down-payment and convenient terms.

It was good enough in its day, to be sure

Most models today are *electrically operated.* You don't have to wind them, but simply play and relax. Don't be without this great home entertainer. See the nearest Victor dealer now and arrange for that home demonstration.

The New Orthophonic **Victrola**

3,000 Classes of Users contribute to this man's knowledge

THE Addressograph representative brings to you methods of cutting expense, securing more business and increasing profits. The experiences of thousands of Addressograph users, engaged in more than 3,000 lines of activities, are at his command.

Back of him stands the Addressograph Research Bureau, combing the nation for detailed information regarding profitable ways of using Addressograph equipment.

He is a specialist in the huge work of increasing net profits by reducing costs of imprinting, listing and addressing modern business forms — whether they be direct mail campaigns, record forms, payroll checks, shipping tags, factory production forms or any of the multitude of Addressograph applications outlined on the Profit Analysis Sheet.

The Addressograph representative is qualified by reason of his own years of training in an organization built during the past 35 years to render a service that helps business make more money. He is equipped to lay before you, without obligation, a story of Addressograph service that has been an important part in building profits in thousands of large and small business institutions.

It will be to your advantage to have the Profit Analysis Sheet checked in every department of your business. Keep in mind that thousands upon thousands of users imprint, list and address 165 distinct business forms with Addressograph equipment 10 to 50 times faster than with pen or typewriter. This gives you a conception of the many profitable ways in which the Addressograph is being used. Our representative will explain the methods adaptable to your particular business.

A request from you will receive the prompt attention of our Research Bureau.

The American Magazine

Contents for June, 1928

Merle Crowell, *Editor*
James C. Derieux, *Managing Editor*

JUST as this issue was going to press, we received from one of our readers a letter that is too good to keep from our other readers. Here it is:

"Well, spring is nearly here, and I am glad, for I am tired of winter. I am tired of getting up in the cold; I am tired of putting on an overcoat with the sleeve lining torn, and I am tired of paying for coal.

"I am going out and shake hands with the first bumblebee that comes zooming by; and I shall get up a flirtation with the first butterfly—regardless of sex.

"Yes, I want some real hot weather: I want to feel the sweat (not perspiration) trickling down my back; I want to see a blue-throated lizard panting at me over a rail that is too hot to stand on; I want to hear a grasshopper give his impersonation of a rattlesnake in the grass.

"When I see and hear and feel these things, then and not till then will I *know* that summer has come!"

One of the joys of our job is the letters we receive from readers. Every day scores of them come, and the reading of them is a delight, for they are friendly, intimate talks about this and that. You can see from the one above just how friendly and personal they are—and you can judge from this "Ode to Spring" what a good time we have with our correspondence.

THE EDITOR.

Here's a lot of people walking, and the artist says they're talking—they've already told him secretly, "We're going for a bath."

He says they seem so hopeful they will find tubs floating-soapful that he *dares* not give them *sinker*-soap because he fears their wrath.

So, dancing on their bath horizon, *there's* a sight to rest their eyes on! Now they'll change their bathrobes for an Ivory lather coat!

They'll have no more of bluish soap, of green or scarlet-huish soap—these *creamy* cakes alone will do, and every one will *float!*

Ivory is really the nicest soap to bathe with that's ever been made. Not only does it float right where you can see it and reach it, drop it where you will; but it quickly gives a lovely, creamy lather which cleanses thoroughly and then rinses off instantly.

KIND TO EVERYTHING IT TOUCHES

Digitized by Google Original from UNIVERSITY OF IOWA

Barbasol *vs.* the Field!

USE BARBASOL ON ONE SIDE—YOUR FAVORITE SHAVING SOAP ON THE OTHER

Barbasol
Skin Freshener
A tonic stimulant. After shaving—after bathing—any time. 65c at all druggists

—LET YOUR FACE DECIDE

YOU have your shaving hobby. Maybe you've stayed with the same soap or other preparation for years. Pretty hard to get you off it.

Yet you may be missing the shaving bet of your life by not playing BARBASOL. We *know* BARBASOL is *faster, smoother, cleaner, closer.*

Why not match BARBASOL against your pick of the field? All you have to do is

Make This 3-Day Test

Use your favorite shaving soap just the way you use it every day—lather up, rub in, hot towel, lather again—but *only on one side* of your face.

Now wet down *the other side*—with hot water or cold, so long as it's wet—and spread on a film of creamy, cooling BARBASOL. No brush. No lathering. No rub-in. Just shave! Like this:

1—Wash the face {and leave it wet}
2—Spread on Barbasol {but don't rub in}
3—Shave!

Do this for three successive days, and—

Let Your Face Decide

Notice how rough and harsh the soap side is—how the soapy alkali burns, and how the razor pulled and the beard fought back!

Feel how silky soft and cool the BARBASOL side is—all pliant with the natural oils left right in the skin. Your face will tell you that BARBASOL is *Faster, Smoother, Closer.*

We know the winner!

At all druggists, 35c and 65c. Send 10c for generous trial tube.

Gillette must do a different job for you each day

—*with a blade which does* all *of them superbly*

THE weather may be fair or foul, warm or freezing; the water may be hot or cold, hard or soft; your digestion, too, affects the comfort of your shave; so do your nerves —how well you slept, and how long you lather.

There are at least forty different reasons why your Gillette Blade never gets precisely the same kind of shaving job to do twice.

There is just one reason why you can always get a smooth, clean, comfortable shave under any conditions—the invincible, even-tempered smoothness of the Gillette Blade—the one *constant* thing about your daily shave.

Gillette could safely make this statement in the beginning when the daily output of blades was less than a hundred. We can make it now with far greater positiveness, when over two million perfectly honed and delicately stropped Gillette Blades leave the plant every day. For these blades are made by delicate machines adjusted to one ten-thousandth of an inch. Human skill could never hope for such accuracy. The blades receive most rigid inspection at every step. To make this possible, four out of every nine employees are skilled inspectors who actually receive a bonus for every blade they discard.

When you slip your fresh Gillette Blade into your razor tomorrow morning, remember that it has a different job to do each day—and *does* it with comfortable smoothness.

GILLETTE SAFETY RAZOR CO., BOSTON, U. S. A

To be sure of a smooth, comfortable shave under *any* conditions, slip a fresh Gillette Blade in your razor.

Tooth paste takes your youngsters to the ballgame

How come, you ask? Do a little arithmetic with us and find out. The average dentifrice costs you 50c. **You use** about a tube a month. Twelve times fifty equals **six dollars,** the yearly cost. Listerine Tooth Paste costs 25c (the **large** tube). Twelve times twenty-five equals three dollars. **All** right. Six dollars minus three dollars equals three **dollars,** your annual saving. Spend it as you please.

Compare this dentifrice to *any*. The results will convince you.

When you try Listerine Tooth Paste we ask you to note the following:

How white and gleaming it makes teeth after a few brushings.

How swiftly it sweeps tartar from the gum line—yet how *gently*.

How delightfully clean and stimulated your entire mouth feels when brushing is over.

We spent fifty years studying tooth and mouth troubles, and in Listerine Tooth Paste we have a dentifrice of which we are proud. Compare its results with those of any dentifrice you have used before. Don't buy unless you feel that Listerine Tooth Paste performs the tooth brushing task more efficiently.

The price of 25c, of course, is possible only because of our advanced manufacturing methods and mass production. Lambert Pharmacal Company, St. Louis, Mo., U. S. A.
